AIR QUALITY AND GHG

D.1: CalEEMod

Cordes TAZ 829 Phase 1

San Joaquin Valley Air Basin, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric
General Office Building	55	1000sqft
General Light Industry	55	1000sqft
Industrial Park	601	1000sqft
Unrefrigerated Warehouse-No Rail	383	1000sqft
Regional Shopping Center	110	1000sqft

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**		**Utility Company**	Pacific Gas & Electric Company
Climate Zone	2		2.7		
		Precipitation Freq (Days)			
			45		

1.3 User Entered Comments

Project Characteristics - CO2 Intensity Factor (289.85 lb/MWh) for 2020 obtained from CPUC GHG Calculator version 3c and used for 2024.

Off-road Equipment - Load factors reduced by 33% to be consistent with OFFROAD2011 modeling methodologies.

Off-road Equipment - Load factors reduced by 33% to be consistent with OFFROAD2011 modeling methodologies.

Off-road Equipment - Load factors reduced by 33% to be consistent with OFFROAD2011 modeling methodologies.

Off-road Equipment - Load factors reduced by 33% to be consistent with OFFROAD2011 modeling methodologies.

Off-road Equipment - Load factors reduced by 33% to be consistent with OFFROAD2011 modeling methodologies.

Vehicle Trips - Trip rates based on information provided by Fehr & Peers.

Energy Use - Energy use rates from Hi-Cube (Industrial Park for CalEEMod) assumed to be the same as or less than Unrefrigerated Warehouse - No Rail.

Solid Waste - Waste generation rate from Hi-Cube (Industrial Park for CalEEMod) assumed to be the same as or less than Unrefrigerated Warehouse - No Rail.

Project Characteristics - CO2 Intensity Factor (289.85 lb/MWh) for 2020 obtained from CPUC GHG Calculator version 3c and used for 2024.

Off-road Equipment - Load factors reduced by 33% to be consistent with OFFROAD2011 modeling methodologies.

Off-road Equipment - Load factors reduced by 33% to be consistent with OFFROAD2011 modeling methodologies.

Off-road Equipment - Load factors reduced by 33% to be consistent with OFFROAD2011 modeling methodologies.

Off-road Equipment - Load factors reduced by 33% to be consistent with OFFROAD2011 modeling methodologies.

Vehicle Trips - Trip rates based on information provided by Fehr & Peers.

Off-road Equipment - Load factors reduced by 33% to be consistent with OFFROAD2010 modeling methodologies.

Energy Use - Energy use rates from Hi-Cube (Industrial Park for CalEEMod) assumed to be the same as or less than Unrefrigerated Warehouse - No Rail.

Solid Waste - Waste generation rate from Hi-Cube (Industrial Park for CalEEMod) assumed to be the same as or less than Unrefrigerated Warehouse - No Rail.

2. Truck percentage assume 10% trucks generated by commercial & office uses and 20% trucks generated from industrial uses. 80% of those would be heavy trucks
3. Assume internal site travel is 0.25 miles per trip along with 5 minutes idle time.

		GHG Measures									
	Selected	*MEASURE #*	*Measure Name*	*Commercial*	*Mixed-Use*	*Residential*	*Estimated CO2 Equivalent Point Reductions*	*Measure Description*	*Added Reductions*	Source	Reduction Methodology & Source
Bicycle/Pedestrian/Transit Measures	X	1	Bike parking	C	M	~	0.625	Non-residential projects provide plentiful short-term and long-term bicycle parking facilities to meet peak season maximum demand. Short term facilities are provided at a minimum ratio of one bike rack space per 20 vehicle spaces. Long-term facilities provide a minimum ratio of one long-term bicycle storage space per 20 **employee** parking spaces.	0.625	SMAQMD	As a rule of thumb, the Center for Clean Air Policy (CCAP) guidebook attributes a 1% to 5% reduction associated with the use of bicycles, which reflects the assumption that their use is typically for shorter trips. Based on the CCAP guidebook, the TIAX report allots 2.5% reduction for all bicycle-related measures and a 1/4 of that for this measure alone. Source: CCAP Transportation Emission Guidebook; TIAX Results of 2005 Literature Search Conducted by TIAX on behalf of SMAQMD.
Bicycle/Pedestrian/Transit Measures		2	End of trip facilities	C	M	~	0.625	Non-residential projects provide “end-of-trip” facilities including showers, lockers, and changing space. Facilities shall be provided in the following ratio: four clothes lockers and one shower provided for every 80 employee parking spaces. For projects with 160 or more employee parking spaces, separate facilities are required for each gender.	FALSE	SMAQMD	The Transportation Demand Management (TDM) Encyclopedia allows a 2-5% reduction for worksite showers and lockers. The CCAP guidebook attributes a 1% to 5% reduction associated with the use of bicycles, which reflects the assumption that their use is typically for shorter trips. Based on the CCAP guidebook, the TIAX report allots 2.5% reduction for all bicycle-related measures and a 1/4 of that for this measure alone. Source: TDM Encyclopedia May 11, 2006; CCAP Transportation Emission Guidebook; TIAX Results of 2005 Literature Search Conducted by TIAX on behalf of SMAQMD.
Bicycle/Pedestrian/Transit Measures		3	Bike parking at multi-unit residential	~	~	R	0.625	Long-term bicycle parking is provided at apartment complexes or condominiums without garages. Project provides one long-term bicycle parking space for each unit without a garage. Long-term facilities shall consist of one of the following: a bicycle locker, a locked room with standard racks and access limited to bicyclists only, or a standard rack in a location that is staffed and/or monitored by video surveillance 24 hours per day.	FALSE	SMAQMD	As a rule of thumb, the CCAP guidebook attributes a 1% to 5% reduction associated with the use of bicycles, which reflects the assumption that their use is typically for shorter trips. Based on the CCAP guidebook, the TIAX report allots 2.5% reduction for all bicycle-related measures and a 25% of that for this measure alone. Source: CCAP Transportation Emission Guidebook; TIAX Results of 2005 Literature Search Conducted by TIAX on behalf of SMAQMD.

Bicycle/Pedestrian/Transit Measures	X	4	**Proximity to bike path/bike lanes**	C	M	R	0.625	Entire project is located within 1/2 mile of an existing Class I or Class II bike lane and project design includes a comparable network that connects the project uses to the existing offsite facility. Existing facilities are defined as those facilities that are physically constructed and ready for use prior to the first 20% of the projects occupancy permits being granted. Project design includes a designated bicycle route connecting all units, on-site bicycle parking facilities, offsite bicycle facilities, site entrances, and primary building entrances to existing Class I or Class II bike lane(s) within 1/2 mile. Bicycle route connects to all streets contiguous with project site. Bicycle route has minimum conflicts with automobile parking and circulation facilities. All streets internal to the project wider than 75 feet have class II bicycle lanes on both sides.	0.625	SMAQMD	As a rule of thumb, the CCAP guidebook attributes a 1% to 5% reduction associated with the use of bicycles, which reflects the assumption that their use is typically for shorter trips. Based on the CCAP guidebook, the TIAX report allots 2.5% reduction for all bicycle-related measures and a 1/4 of that for this measure alone. If zoning codes in the San Joaquin Valley area have provisions that allow a project to build less than the typically mandated amount of parking if the development features design elements that reduce the need for automobile use. This measure recognizes the air quality benefit that results when facilities minimize parking needs, and grants mitigation value to project that implement all available parking reductions. Once land uses are determined, the trip reduction factor associated with this measure can be determined by utilizing the Institute of Transportation Engineers (ITE) Parking generation publication. The reduction in trips can be computed as shown below by the ratio of the difference of minimum parking required by code and ITE peak parking demand to ITE peak parking demand for the land uses multiplied by 50%. The maximum achievable trip reduction is 6%. For projects where retail space occupies 50% or more of the total built space, do not use December specific parking generation rates (from ITE). Planned transit must be in MTP or RT Master Plan. To count as "existing transit" service must be fully operational prior to the first 20% of the projects occupancy permits being granted. Project must provide safe and convenient pedestrian and bicycle access to all transit stops within 1/4 mile. Proponent shall provide information demonstrating compliance with measure requirements including, but not limited to, a written description of how the project complies with the measure, a map or graphic depicting the location of the project in relation to the transit stop. Graphic should demonstrate a 1/4 mile radius, arc, from transit and planned pathways and linkages to the transit stop. Proponent shall also provide graphics depicting the size and layout of the building as well as the calculations demonstrating the FAR (floor to area ratio).	FALSE	SMAQMD	No empirical support for this measure, beyond that provided by SMAQMD in its draft guidance. According to Nelson/Nygaard, 2005, trip generation at the non-residential end is influenced by density to a much lesser degree, so this is fairly consistent with the transit reductions applied in measure 20. Assumes a 30 min. transit schedule.

Mixed-Use Measures		**22d**	**Urban Mixed-Use Measure**	~	M	~	7.29	Reductions apply if the ratio (jobs:houses) is ≥ 2.0 and < 2.5: Development of projects predominantly characterized by properties on which various uses, such as office, commercial, institutional, and residential are combined in a single building or on a single site in an integrated development project with functional inter-relationships and a coherent physical design. Mitigation points for this measure depend on job to housing ratio.	FALSE	SMAQMD	The point reductions were verified using Urbemis 2007 9.2.4 assuming 200 jobs and 100 homes. Note, a conservative value was used as mitigation points to cover the range of the ratio (jobs to housing).

Mixed-Use Measures		**22e**	**Urban Mixed-Use Measure**	~	M	~	6	Reductions apply if the ratio (jobs:houses) is ≥ 2.5 and < 3.0: Development of projects predominantly characterized by properties on which various uses, such as office, commercial, institutional, and residential are combined in a single building or on a single site in an integrated development project with functional inter-relationships and a coherent physical design. Mitigation points for this measure depend on job to housing ratio.	FALSE	SMAQMD	The point reductions were verified using Urbemis 2007 9.2.4 assuming 250 jobs and 100 homes. Note, a conservative value was used as mitigation points to cover the range of the ratio (jobs to housing).

Note, a conservative value was used as mitigation points to cover the range of the ratio (jobs to housing).
Mixed-Use Measures	X	**23**	**Suburban mixed-use**	C	M	R	3	Have at least three of the following on site and/or offsite within ¼ mile: Residential Development, Retail Development, Park, Open Space, or Office.	3	SMAQMD	By definition, this type of land use implies that housing availability is greater than employment availability. On a project-by-project basis, use formula :Nelson/Nygaard, 2005. pg. 12. (trip reduction = (1-(ABS(1.5*h-e)/(1.5*h+e))-0.25)/0.25*0.03) where h = study area housing units, e = study area employment (Criteron & Fehr & Peers, 2001) to obtain higher than 3% reduction. Otherwise, assume 3% max reduction.
Mixed-Use Measures		**24**	**Other mixed-use**	~	M	R	1	All residential units are within ¼ mile of parks, schools or other civic uses.	FALSE	SMAQMD	This measure has less to do with employment/housing balance. No empirical support for this measure, but logic from measures 24 and 25 still applies.
Building Component Measures	X	**27**	**Energy Star roof**	C	M	R	0.5	Install Energy Star labeled roof materials. Energy star qualified roof products reflect more of the sun's rays, decreasing the amount of heat transferred into a building.	0.5	SMAQMD	Reductions are based on the credits documented in the SMAQMD Guidance for Land Use Reductions and consistent with the point rating now set at 0.5 for qualified roof products. Baseline conditions assume indirect emission reduction through more even temperature control of environmental space. Approach is enforceable and may be monitored through site review and/or consultation with lead agency that roofing materials match those described in the SMAQMD Guidance for Land Use Reductions.

Building Component Measures		28	Onsite renewable energy system	C	M	R	1	Project provides onsite renewable energy system(s).	FALSE	SMAQMD	Reductions are based on the Energy & Atmosphere credits (EA Credit 2) documented in the Leadership in Energy & Environmental Design (LEED), Green Building Rating System for New Constructions and Major Renovations, Version 2.2, October 2005. The reduction assumes that at least 12.5% of the buildings total energy use (as expressed as a fraction of annual energy cost) is supplied through the use of on-site renewable energy systems. Alternatively a project may use the Department of Energy (DOE) Commercial Buildings Energy Consumption Surevy (CBECS) database to determine the estimated electricity use. Non-polluting and renewable energy potential includes solar, wind, geothermal, low-impact hydro, biomass and bio-gas strategies. When applying these strategies, projects may take advantage of net metering with the local utility. The measure is enforcable through LEED Letter certification and building design calculations demonstrating that at least 12.5% of total energy costs are supplied by the renewable energy system(s).
Building Component Measures	X	29	Exceed title 24	C	M	R	1	Project Exceeds title 24 requirements by 20%	1	SMAQMD	Reductions assume at least a 20% over Title 24 requirements, as calculated by the Sacramento Municipal Utility District (SMUD, 2006 Advantage Home Program Overview). The proposed point value for this operational mitigation measure is 1.0, consistent with the rating assigned to this measure by SMAQMD Land Use Mitigation Measures. Total compliance margin is based on energy savings relative to the total energy budget and cooling energy budget of the Title 24 Standard design home. Proponent shall provide information demonstrating compliance with measure requirements including, but not limited to, specifications and any available manufacturer's documentation on the devices to be used. This measure's successful implementation may be verified by a site review following construction to confirm that the project as built contains ozone destruction catalysts as described in the Air Quality Plan.
Building Component Measures	X	30	Solar orientation	~	~	R	0.5	Orient 75 or more percent of homes and/or buildings to face either north or south (within 30 degrees of N/S)	0.5	SMAQMD	Reduction assumes that proper solar orientation can produce a total energy savings of 11% to 16.5% and reduce heating fuel consumption by up to 25% (Local Government Commission, 1998). Mitigation measure points are based on the credits documented in the SMAQMD Guidance for Land Use Reductions and consistent with the point rating now set at 0.5 for proper orientation. Reduction methodology will be based on quantification of the difference in solar radiance from development with designed orientations (75 or more percent of homes and/or buildings to face within 30 degrees either north or south) compared to evenly distributed orientations. Project compliance will be based on the percentage of orientation buildings designed with proper design features (overhangs, landscaping).

Building Component Measures	X	**31**	**Non-Roof Surfaces**	C	M	R	1	Provide shade (within 5 years) and/or use light-colored/high-albedo materials (reflectance of at least 0.3) and/or open grid pavement for at least 30% of the site's non-roof impervious surfaces, including parking lots, walkways, plazas, etc.; OR place a minimum of 50% of parking spaces underground or covered by structured parking; OR use an open-grid pavement system (less than 50% impervious) for a minimum of 50% of the parking lot area. Unshaded parking lot areas, driveways, fire lanes, and other paved areas have a minimum albedo of .3 or greater	1	SMAQMD	Reductions are based on the Sustainable Site credits (SS Credit 7.1) documented in the Leadership in Energy & Environmental Design (LEED), Green Building Rating System for New Constructions and Major Renovations, Version 2.2, October 2005. The reduction assumes that the project provides any combination of the following strategies for 50% of the site landscape (including roads, sidewalks, courtyards nd parking lots): Shade (within 5 years of occupancy); paving materials with a solar Reflectance Index (SRI) of at least 29; open grid pavement system.
Building Component Measures		**32**	**Green Roof**	C	M	R	0.5	Install a vegetated roof that covers at least 50% of roof area	FALSE	SMAQMD	Reductions are based on the Energy & Atmosphere credits (EA Credit 2) documented in the Leadership in Energy & Environmental Design (LEED), Green Building Rating System for New Constructions and Major Renovations, Version 2.2, October 2005. The reduction assumes that a vegetated roof is installed on a least 50% of the roof area or that a combination high albedo and vegetated roof surface is installed that meets the following standard: (Area of SRI Roof/0.75)+(Area of vegetated roof/0.5) >= Total Roof Area.

Note: Required data input sections have a yellow background.
Optional data input sections have a blue background. Only areas with a
yellow or blue background can be modified. Program defaults have a white background.
The user is required to enter information in cells C10 through C25.

Note: Required data input sections have a yellow background.
Optional data input sections have a blue background. Only areas with a
yellow or blue background can be modified. Program defaults have a white background.
The user is required to enter information in cells C10 through C25.

Cordes Ranch - Tracy, CA - Phase 1 Construction - Risk Exposure Factors

Cancer Risk Calculation Method

Inhalation Dose = C_{air} x DBR x A x EF x ED x 10^{-6} / AT

Where: C_{air} = concentration in air ($\mu g/m^3$)
DBR = daily breathing rate (L/kg body weight-day)
A = Inhalation absorption factor
EF = Exposure frequency (days/year)
ED = Exposure duration (years)
AT = Averaging time period over which exposure is averaged.
10^{-6} = Conversion factor

Inhalation Dose Factors

Exposure Type	Value[1]					
	DBR (L/kg BW-day)	**A (-)**	**Exposure (hr/day)**	**EF (days/yr)**	**ED (Years)**	**AT (days)**
Residential	393	1	24	350	10	25,550
Off-Site Worker	149	1	8	245	10	25,550

[1] Default values recommended by OEHHA& San Joaquin Valley Air Pollution Control District

Cancer Risk (per million) = CPF x Inhalation Dose x 1.0E6
= URF x Cair

Where: CPF = Cancer potency factor $(mg/kg\text{-}day)^{-1}$

Air Quality Modeling Files For:
Cordes Ranch Health Risk Modeling

The AERMOD model was used to model diesel particulate matter (DPM) emissions from sources related to the construction and operation of the Cordes Ranch Project to assess DPM concentrations in the project area. Modeling was conducted to evaluate impacts from Phase 1 project construction and operation and for Full Buildout construction and operation.

Hourly meteorological data for Tracy for years 2004 – 2008, prepared for use with the AERMOD model by the SJVAPCD, were used in the modeling.

Four scenarios were modeled as part of the evaluation. Modeling receptors included on-site residential receptors, off-site residential receptors, and off-site worker receptors. A summary of the four scenarios modeled and associated receptor sets used for each scenario are summarized below.

Phase 1
- Construction
  - On-site residential receptors
  - Off-site residential receptors
  - Off-site worker receptors
- Operation
  - On-site residential receptors
  - Off-site residential receptors
  - Off-site worker receptors

Full Buildout
- Construction
  - On-site residential receptors
  - Off-site residential receptors
  - Off-site worker receptors
- Operation
  - Off-site residential receptors
  - Off-site worker receptors

The meteorological data files and the modeling files are contained in the following zip files:

- Tracy-SJVAPCD.zip
- CordesRanch_HRA_Modeling.zip

The contents of the modeling zip file are summarized in the table below. Following the table below are copies of all the AERMOD output files, which also contain the input file information at the beginning of each file.
