*** MODELOPTs: NonDFAULT CONC FLAT RURAL ADJ_U*

*** MODEL SETUP OPTIONS SUMMARY ***

---

**Model Is Setup For Calculation of Average CONCentration Values.

-- DEPOSITION LOGIC --
**NO GAS DEPOSITION Data Provided.
**NO PARTICLE DEPOSITION Data Provided.
**Model Uses NO DRY DEPLETION. DRYDPLT = F
**Model Uses NO WET DEPLETION. WETDPLT = F

**Model Uses RURAL Dispersion Only.

**Model Allows User-Specified Options:
1. Stack-tip Downwash.
2. Model Assumes Receptors on FLAT Terrain.
3. Use Calms Processing Routine.
4. Use Missing Data Processing Routine.
5. No Exponential Decay.

**Other Options Specified:
ADJ_U* - Use ADJ_U* option for SBL in AERMET
CCVR_Sub - Meteorological data includes CCVR substitutions
TEMP_Sub - Meteorological data includes TEMP substitutions

**Model Assumes No FLAGPOLE Receptor Heights.

**The User Specified a Pollutant Type of: OTHER

**Model Calculates 1 Short Term Average(s) of: 1-HR
and Calculates PERIOD Averages

**This Run Includes: 2261 Source(s); 33 Source Group(s); and 305 Receptor(s)

with: 28 POINT(s), including
0 POINTCAP(s) and 0 POINTHOR(s)
and: 2233 VOLUME source(s)
and: 0 AREA type source(s)
and: 0 LINE source(s)
and: 0 RLINE/RLINEXT source(s)
and: 0 OPENPIT source(s)
and: 0 BUOYANT LINE source(s) with 0 line(s)

**Model Set To Continue RUNning After the Setup Testing.

**The AERMET Input Meteorological Data Version Date: 18081

**Output Options Selected:
Model Outputs Tables of PERIOD Averages by Receptor
Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE Keyword)
Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
Model Outputs Separate Summary File of High Ranked Values (SUMMFILE Keyword)

**NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
m for Missing Hours
b for Both Calm and Missing Hours

**Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 158.00 ; Decay Coef. = 0.000 ; Rot. Angle = 0.0
Emission Units = GRAMS/SEC ; Emission Rate Unit Factor = 0.10000E+07
Output Units = MICROGRAMS/M**3

**Approximate Storage Requirements of Model = 8.3 MB of RAM.

**Input Runstream File: aermod.inp
**Output Print File: aermod.out

**Detailed Error/Message File: Tracy CostcoV2.err
**File for Summary of Results: Tracy CostcoV2.sum

# Appendix 4 – HARP2 Output File:

HARP2 - HRACalc (dated 21081) 6/8/2022 6:35:57 PM - Output Log

GLCs loaded successfully
Pollutants loaded successfully
Pathway receptors loaded successfully
**********
RISK SCENARIO SETTINGS

Receptor Type: Resident
Scenario: NCAcute
Calculation Method: Derived

**********
EXPOSURE DURATION PARAMETERS FOR CANCER
**Exposure duration are only adjusted for cancer assessments**

**********
PATHWAYS ENABLED

NOTE: Inhalation is always enabled and used for all assessments. The remaining pathways are only used for cancer and noncancer chronic assessments.

Inhalation: True
Soil: False
Dermal: False
Mother's milk: False
Water: False
Fish: False
Homegrown crops: False
Beef: False
Dairy: False
Pig: False
Chicken: False
Egg: False

**********
INHALATION

Daily breathing rate: LongTerm24HR

**Worker Adjustment Factors**
Worker adjustment factors enabled: NO

**Fraction at time at home**
NOTE: Exposure duration (i.e., start age, end age, ED, & FAH) are only adjusted for cancer assessments.

**********
TIER 2 SETTINGS
Tier2 not used.

**********

Calculating acute risk

Acute risk breakdown by pollutant and receptor saved to: C:\Users\Smith\Dropbox\My PC (DESKTOP-977GSBU)\Documents\HRA\Tracy Costco DepotV2\HARP2\TRACYV2\hra\AcuteNCAcuteRisk.csv

# APPENDIX B.4

## Analysis of Models and Tools to Correlate Project-Generated Pollutants to Health End Points

# APPENDIX B

Appendix B of the Draft EIR includes additional information regarding models and tools for correlating project-generated criteria pollutant emissions to health end points. The following table is an addition to Appendix B.

***ANALYSIS OF MODELS AND TOOLS TO CORRELATE PROJECT-GENERATED CRITERIA POLLUTANT EMISSIONS TO HEALTH END POINTS***

| TOOL | CREATED BY | DESCRIPTION | RESOLUTION | POLLUTANTS ANALYZED | PROJECT-LEVEL CEQA APPLICABILITY |
|---|---|---|---|---|---|
| AERMOD Modeling System[1,2] | AERMIC | A steady-state plume model that incorporates air dispersion based on planetary boundary layer turbulence structure and scaling concepts, including treatment of both surface and elevated sources, and both simple and complex terrain. The modeling system incorporates air dispersion based on a planetary boundary layer turbulence structure and scaling concepts, including treatment of both surface and elevated sources, and both simple and complex terrain. | Project-level | $SO_2$, ROG, $NO_2$, Lead, $PM_{2.5}$, $PM_{10}$, $NH_3$ | This model operates at the project-level and provides air dispersion modeling for a project's emissions on the surrounding environment. However, even with supplementary (i.e. additional software), the model cannot estimate specific health effects on receptors from the air dispersion modeling. Moreover, it cannot model the (complex) chemical reactions that occur between the ozone precursors (e.g. NOx and ROG) that generate ozone. Therefore, this model is not recommended for project-level CEQA analysis. |
| AirCounts[3] | Abt Assoc. | Online tool that helps large and medium-sized cities quickly estimate the health benefits of $PM_{2.5}$ emission reductions and economic value of those benefits. The tool estimates the number of deaths (mortality) avoided and economic value related to user-specified regional, annual $PM_{2.5}$ emissions reduction. | City-level | Primary $PM_{2.5}$ | This tool is only illustrative, as it is limited to certain cities and does not target specific sectors. The tool is not sector specific, and includes limited California data. It cannot provide results at a project-level. Therefore, the tool is not recommended for project-level CEQA analysis. |
| Air Pollution Emission Experiments and Policy analysis (APEEP) model[4] | Mueller and Mendelsohn2006, 2009 | The Air Pollution Emission Experiments and Policy (APEEP) analysis model (Muller and Mendelsohn 2006, 2009) is a traditional integrated assessment model. Like other integrated assessment models, APEEP connects emissions of air pollution through air-quality modeling to exposures, physical effects, and monetary damages. Making these links requires the use of findings reported in the peer-reviewed literature across several scientific disciplines. The air-quality models in APEEP use the emission data provided by EPA to estimate corresponding ambient concentrations in each county in the coterminous states. | National or county-level | $SO_2$, ROG, $NO_x$, Ozone, $PM_{2.5}$, $PM_{10}$ | The model operates at the national scale but may be applied at the county-level (although it is not clear how this adjustment should be made). It cannot provide results at a project-level. The tool is also not commercially available. Therefore, the tool is not recommended for project-level CEQA analysis. |

[1] See: https://www.epa.gov/scram/air-quality-dispersion-modeling-preferred-and-recommended-models

[2] Note: May require additional software to estimate the level of each specific pollutant at the modeled receptors.

[3] See: https://www.abtassociates.com/tools

[4] See: https://public.tepper.cmu.edu/nmuller/APModel.aspx

| Tool | Created by | Description | Resolution | Pollutants Analyzed | Project-level CEQA Applicability |
|---|---|---|---|---|---|
| CALINE3/ CAL3QHC/ CAL3QHCR[1, 2] | USEPA | A steady-state Gaussian dispersion model designed to determine air pollution concentrations at receptor locations downwind of highways located in relatively uncomplicated terrain. CALINE3 is incorporated into the more refined CAL3QHC and CAL3QHCR models. CAL3QHCR is a more refined version based on CAL3QHC that requires local meteorological data. | Project-level | $SO_2$, ROG, $NO_2$, Lead, $PM_{2.5}$, $PM_{10}$ | This model operates at the project-level and provides air dispersion modeling for a project's emissions on the surrounding environment. However, even with supplementary (i.e. additional software), the model cannot estimate specific health effects on receptors from the air dispersion modeling. Moreover, it cannot model the (complex) chemical reactions that occur between the ozone precursors (e.g. NOx and ROG) that generate ozone. Therefore, this model is not recommended for project-level CEQA analysis. |
| Complex Terrain Dispersion Model Plus Algorithms for Unstable Situations (CTDMPLUS)[1, 2] | USEPA | A refined point source gaussian air quality model for use in all stability conditions for complex terrain. The purpose of the model is to provide a practical, refined plum model for elevated point sources near complex terrain. | Project-level | $SO_2$, ROG, $NO_2$, Lead, $PM_{2.5}$, $PM_{10}$ | This model operates at the project-level and provides air dispersion modeling for a project's emissions on the surrounding environment. However, even with supplementary (i.e. additional software), the model cannot estimate specific health effects on receptors from the air dispersion modeling. Moreover, it cannot model the (complex) chemical reactions that occur between the ozone precursors (e.g. NOx and ROG) that generate ozone. Therefore, this model is not recommended for project-level CEQA analysis. |
| Co-Benefits Risk Assessment (COBRA)[5] | USEPA | Preliminary screening tool that contains baseline emission estimates of a variety of air pollutants for a single year. COBRA is targeted to state and local governments as a screening assessment for clean energy policies. EPA's CO–Benefits Risk Assessment (COBRA) screening model is a free tool that helps state and local governments:<br>• Explore how changes in air pollution from clean energy policies and programs;<br>• Estimate the economic value of the health benefits associated with clean energy policies and programs to compare against program costs;<br>• Map and visually represent the air quality, human health, and health-related economic benefits from reductions in emissions of particulate matter ($PM_{2.5}$), sulfur dioxide ($S0_2$), nitrogen oxides ($NO_X$), ammonia ($NH_3$), and volatile organic compounds (VOCs) that result from clean energy policies and programs. | National, regional, state, or county-levels | $PM_{2.5}$, $SO_2$, $NO_x$, $NH_3$, and ROG | COBRA is a preliminary screening tool only and cannot be used at sub-county resolution. It cannot provide results at a project-level. It also does not account for secondary emission changes resulting from market responses. Accordingly, the tool is not recommended for project-level CEQA analysis. |

[5] See: https://www.epa.gov/statelocalenergy/co-benefits-risk-assessment-cobra-health-impacts-screening-and-mapping-tool

| Tool | Created by | Description | Resolution | Pollutants Analyzed | Project-level CEQA Applicability |
|---|---|---|---|---|---|
| Environmental Benefits and Mapping Program-Community Edition (BenMAP-CE)[6] | USEPA | The USEPA's detailed model for estimating the health impacts from air pollution. It relies on input concentrations and applies concentration-response (C-R) health impact functions, which relate a change in the concentration of a pollutant with a change in the incidence of a health endpoint, including premature mortality, heart attacks, chronic respiratory illnesses, asthma exacerbation and other adverse health effects. Detailed inputs are required for air quality changes (concentrations from AERMOD), population, baseline incidence rates, and effect estimates. | National, County, City, and sub-regional levels | Ozone, PM, $NO_2$, $SO_2$, CO | This tool is not well suited to analyze small or localized changes in pollutant concentrations associated with individual projects. Although this tool is under consideration by some California air districts for use towards project-level analysis, no air district in California has promulgated a methodology (using this tool or any other) that would correlate the expected air quality emissions of projects to the likely health consequences of the increased emissions. Accordingly, the tool is not recommended. |
| Fast Scenario Screening Tool (TM5-FASST)[7] | Joint Research Centre (Italy) | A tool that allows users to evaluate how air pollutant emissions affect large scale pollutant concentrations and their impact on human health (mortality and years of life lost) and crop yield from national to regional air quality policies, such as climate policies. The target policy domains are national to regional air quality policies, or air pollutant scenarios linked to other policy domains (e.g. climate policy). The tool is web-based and does not require coding or modelling. Users must gain access through publishers. | Global and national-levels | $PM_{2.5}$, Ozone, $NO_x$, $NH_3$, CO, ROG, $CH_4$, $SO_2$ | This tool is applicable at national to global scales. It cannot provide results a project-level. Accordingly, the tool is not recommended for project-level CEQA analysis. |
| Long-range Energy Alternatives Planning System-Integrated Benefits Calculator (LEAP-IBC)[8] | Climate and Clean Air Coalition (CCAC) | A calculator that allows users to rapidly estimate the impacts of reducing emissions on health, climate, and agriculture. The tool uses sensitivity coefficients that link gridded emissions of air pollutants and precursors to health, climate and agricultural impacts at a national level. The tool is primarily used for policy analysis. The tool is currently Excel-based and is available through the developers only. A web-based interface is currently under development. | National-level | $PM_{2.5}$, Ozone, $NO_2$ | This tool is applicable at national scale. Accordingly, the tool is not recommended for project-level CEQA analysis. |
| Methodology for Estimating Premature Deaths Associated with Long-Term Exposure to Fine Airborne Particulate Matter in California[9] | California Air Resources Board | The staff report identifies a relative risk of premature death associated with $PM_{2.5}$ exposure based on a review of all relevant scientific literature, and a new relative risk factor was developed. This new factor is a 10% increase in risk of premature death per 10 $\mu g/m^3$ increase in exposure to $PM_{2.5}$ concentrations (uncertainty interval: 3% to 20%) | National | $PM_{2.5}$ | The primary author of the CARB staff report notes that the analysis method is not suited for small projects and may yield unreliable results due to various uncertainties. The tool also cannot provide results on a project-level. Accordingly, the tool is not recommended for project-level CEQA analysis. |

[9] See: https://ww3.arb.ca.gov/research/health/pm-mort/pmmortalityreportfinalr10-24-08.pdf

| Tool | Created by | Description | Resolution | Pollutants Analyzed | Project-level CEQA Applicability |
|---|---|---|---|---|---|
| Multi-Pollutant Evaluation Method (MPEM)[10] | BAAQMD | Estimates the impacts of control measures on pollutant concentration, population exposures, and health outcomes for criteria, toxic, and GHG pollutants. Monetizes the value of total health benefits from reductions in $PM_{2.5}$, ozone, and certain carcinogens, and the social value of GHG reductions. MPEM was designed for development of a Clean Air Plan for the San Francisco Bay Area. The inputs are specific to the SF region and are not appropriate for projects outside BAAQMD. | Regional level in the SFBAAB | Ozone, PM, air toxics, GHG | This tool is designed to support the BAAQMD in regional planning and emissions analysis within the San Francisco Bay Area Air Basin (SFBAAB). The model applies changes in pollutant concentrations over a four-square kilometer grid. The tool also cannot provide results on a project-level. Additionally, this tool is only applicable for the SFBAAB. Accordingly, the tool is not recommended for project-level CEQA analysis. |
| Offshore and Coastal Dispersion Model Version 5 (OCD)[1, 2] | USEPA | A straight-line Gaussian model developed to determine the impact of offshore emissions from point, area or line sources on the air quality of coastal regions. OCD incorporates overwater plume transport and dispersion as well as changes that occur as the plume crosses the shoreline. Hourly meteorological data are needed from both offshore and onshore locations. | Project-level | $SO_2$, ROG, $NO_2$, Lead, $PM_{2.5}$, $PM_{10}$ | This model operates at the project-level and provides air dispersion modeling for a project's emissions on the surrounding environment. However, even with supplementary (i.e. additional software), the model cannot estimate specific health effects on receptors from the air dispersion modeling. Moreover, it cannot model the (complex) chemical reactions that occur between the ozone precursors (e.g. NOx and ROG) that generate ozone. Therefore, this model is not recommended for project-level CEQA analysis. |
| Response Surface Model (RSM)-based Benefit-per-Ton Estimates[11] | USEPA | Consists of tables reporting the monetized $PM_{2.5}$-related health benefits from reducing $PM_{2.5}$ precursors from certain source types nationally and for 9 US cities/regions. Applying these estimates simply involves multiplying the emissions reduction by the relevant benefit per-ton metric. The resulting value is the PM mortality risk estimate at a 3% discount rate. | National or regional (San Joaquin County only) levels | SOx, VOC, $NH_3$, $NO_x$ | RSM includes regional values specific to San Joaquin County. The values are also dated. Accordingly, the tool is not recommended for project-level CEQA analysis. |
| Sector-based Benefit-per-Ton Estimates[12] | USEPA | Two specific sets of Benefit-per-ton (BPT) estimates for 17 key source categories are available. Both are a reduced-form approach based on BenMAP modeling. Applying these factors involves multiplying the emissions reduction (in tons) by the relevant benefit (economic value) or incidence (rates of mortality and morbidity) per-ton metric. The resulting value is the economics, mortality, and morbidity of direct and indirect $PM_{2.5}$ emissions. | National-scale | $PM_{2.5}$, $SO_2$, $NO_x$ | The BPT estimates do not account for project-specific emissions or receptor locations, local dispersion characteristics, or regional photochemistry. The resultant health effects are therefore reflective of national averages and may not be accurate when applied to the project-level. Accordingly, the tool is not recommended for project-level CEQA analysis. |

# APPENDIX C

**Geotechnical Review**

April 20, 2018
Project No. 20190182.001A

**Costco Wholesale**
999 Lake Drive
Issaquah, Washington 98027

Attention: Mr. Peter Kahn
Director of Real Estate Development

**Subject: Geotechnical Review**
**Proposed Costco E-Commerce Facility**
**Tracy Hom Trust Property**
**16000 West Schulte Road**
**Tracy, California**
**CW# 17-0267**

Dear Mr. Kahn

This letter presents the results of Kleinfelder's geotechnical review for the proposed Costco E-Commerce facility to be located within the Tracy Hom Trust Property site (APN Parcel ID: 209-230-02) at 16000 W. Schulte Road in Tracy, California. The purpose of our services was to review readily-available geotechnical and geologic information for the project site to apprise Costco of potential geotechnical-related risks that may affect the cost and long-term performance of the proposed project. A review of the environmental-related risks, which include a Limited Phase II Environmental Site Assessment (ESA), is currently being performed by Kleinfelder and the results will be submitted in a separate report.

## PROJECT INFORMATION

The Tracy Hom Trust Property site is approximately 103 acres and is bound by the Delta Mendota channel to the south, W. Schulte Road to the north and private roads to the east and west. We understand the proposed E-Commerce facility will include the construction of an E-Commerce building with office and warehouse space. Like the proposed E-commerce development to the west, minor ancillary structures, such as a new guard booth and pump room are anticipated. Based on conversations with Costco, the E-Commerce facility will occupy approximately 400,000 to 500,000-square-feet of the Tracy Hom Trust Property. We anticipate the new facility will consist of single-story, concrete tilt-up structures and that the building's surroundings will include parking areas with loading docks, landscaping and drainage basins. Parking lots and drive aisles are typically paved with either Portland cement concrete or asphalt concrete.

Conceptual grading plans were not available at this time. Based on the existing topography, we anticipate the building pads may be raised up to 5 feet. We understand that fill material generated during grading of the overall development may be used to raise the Costco site and/or import fill may be needed.

© 2018 Kleinfelder
40 Clark Street, Suite J, Salinas, CA 93901 **p |** 831.755.7900 **f |** 831.755.7909

## EXISTING SITE CONDITIONS

The Tracy Hom Trust Property site comprises of approximately 103-acres and is located north of the Highway 580 and Delta Mendota channel in Tracy, California. On April 18, 2018, a Kleinfelder engineering professional visited the site to observe the existing conditions. The site is vacant and undeveloped with perimeter dirt roads, some graded areas, and sparse scrub vegetation in thick grasses. Based on historical aerial photographs, the entire Tracy Hom Trust Property site was previously used for agriculture and farming (i.e. a former orchard).

The northern portion of the site, near W. Schulte Road is topographically higher than the south end of the site which is bounded by the Delta Mendota channel; the site generally grades from low to high toward the northeast. The Delta-Mendota channel overflow spillway structure is approximately located in the center of the southern boundary of the site. The spillway's orientation is northeast and trends down toward the south portion of the site. The Delta-Mendota Channel banks slope up towards the south to the top of the concrete channel. We anticipate the proposed Costco facility will be in the southern portion of the Tracy Hom Trust Property site; however, the precise location and orientation of the facility are unknown.

In addition, there are two existing features within the northeast corner of site consisting of an existing PG&E gas line running northwest and a large depressed area possibly used as a drainage basin or detention pond during previous agricultural use. The depth of the basin is up to approximately 10 feet below the surrounding grades at its center. Details regarding the depth and size of the gas line are currently not currently known.

The fieldwork for the Limited Phase II ESA is currently being performed. Representative soil samples have been taken at various locations across the site. The soil samples are comprised of shallow near surface samples up to a depth of 12 inches below ground surface. The results of the testing will be available in a few weeks and presented in a separate report. The description of the near surface cover soils is typical of the agricultural region and consists of moderate vegetation (in the form of thick grasses) and clay rich top soil.

## SUBSURFACE CONDITIONS

Based on our review of available geotechnical and geologic information from two reports by Kleinfelder for the surrounding properties, we anticipate subsurface conditions consist of topsoil over native basin deposits underlain and interbedded with alluvial fan deposits. We anticipate the basin deposits will consists of stiff to hard, lean to fat clay and silt and extend up to a depth of about 50 feet bgs. Alluvial soils generally interbed with basin deposits below a depth of about 5 to 10 feet and primarily consist of medium to very dense silty and clayey sand and sand with varying amounts of gravel. Based on available groundwater data and maps, we anticipate the groundwater level is generally greater than 40 to 50 feet bgs. Neighboring geotechnical field studies indicate near surface basin deposits within the upper 5 feet exhibit medium to high expansion characteristics and are moderately compressible.

## FINDINGS

Based on the results of our geotechnical review, it is our professional opinion that the proposed project is geotechnically feasible. We identified the following key geotechnical considerations.

On previous IPC projects we have suggested attempting to "surgically" strip off near surface expansive clays to expose a uniform non to low-expansive subgrade for the he near surface clays

© 2018 Kleinfelder
KLEINFELDER 40 Clark Street, Suite J, Salinas, CA 93901 **p |** 831.755.7900 **f |** 831.755.7909

may exhibit medium to high expansion characteristics. Based on our understanding of the site topography and subsurface information, we anticipate grading will expose expansive clays. Therefore, expansive soil mitigation measures will be required. Mitigation measures may include importing non-expansive fill for placement over the subgrade (in fill areas), removing and replacing with non-expansive fill at subgrade level, or using cement or lime treating the upper 12 to 18 inches of the subgrade. In addition, due to the tendency of expansive clays to swell and heave, site drainage should be directed away from building footprints to minimize moisture and volume change underneath floor slabs or foundations.

- Assuming expansive soils and deleterious materials are overexcavated/removed and structural fill or stabilized (i.e., lime treated), the proposed Costco depot buildings may be supported on a conventional shallow foundation system. If footing excavations bear in native expansive soils, footing embedment up to 30 inches below the lowest adjacent subgrade may be required. Foundations should be supported below the critical zone of seasonal moisture fluctuations where soil shrink-swell cycles are most severe.
- Conceptual grading plans were not available at this time; however, we anticipate fills up to 5 feet may be placed to construct the building pads. The native near surface clay is considered expansive and should not be used in structural fills unless they have been stabilized. As an alternative, relatively non-expansive import fills may be used in structural fills. Based on our experience in the area and typical Costco building loads, static settlements should be within tolerable levels. However, if fills greater than about 5 feet are placed to create the building pads, excessive settlements may occur. Depending on the height of fill placed, pre-loading or surcharging may be required.
- A PG&E gas line easement is located within the northeast corner of the site. Details regarding depth and size of the gas line are not known at this time. The direction of the gas line runs from the northwest through W. Schulte Road and towards the southeast through the eastern site boundary. The facility development should consider setbacks from the easement. If setbacks are not an option and the facility development plans to encroach onto the easement or the gas line, the impacted of the proposed construction should evaluated in detail.
- Just north of the existing PG&E easement south of W. Schulte Road is a large depressed area, which was possibly a drainage basin or detention pond during previous agricultural use. The depth of the basin is about 8 to 10 feet deep at its center and the length is about 200 feet. The history and use of this depression and construction implications to bring this area up to subgrade should evaluated. Backfill material should follow and be placed in accordance with current Costco standards.
- Near surface expansive clays do not have favorable drainage conditions (low permeability) for shallow infiltration systems (i.e., bioswale or infiltration basins) and therefore, will not infiltrate effectively. Infiltration Best Management Practices (BMPs) are not considered a viable option for use at this site.
- Corrosion testing results on the neighboring sites indicated near surface soils may be highly corrosive to corrosive towards ferrous metals. In general at these sites, sulfate and chloride results do not indicate corrosivity impacts; however one isolated sample north of the site indicated the evaluation of special provisions for selecting cement type. Special provisions for the selection of cement type may need to be considered if building pads and footings are bearing in native soils. In general, corrosion protection for future buried utilities and concrete foundations should be considered.

## CLOSURE

This work was performed in a manner consistent with that level of care and skill ordinarily exercised by other members of Kleinfelder's profession practicing in the same locality, under similar conditions, and at the date the services are provided. Our conclusions, opinions, and recommendations are based on a limited number of observations and data. It is possible that conditions could vary between or beyond the data evaluated. Kleinfelder makes no other representation, guarantee, or warranty, express or implied, regarding the services, communication (oral or written), report, opinion, or instrument of service provided.

We appreciate the opportunity to provide geotechnical engineering services to you on this project. If you have any questions regarding this report or if we can be of further service, please do not hesitate to contact the project manager Andrea Traum at 408.595.3275, or Andy Franks, Kleinfelder's Client Account Manager for Costco, at 480.650.4905.

Respectfully submitted,

**KLEINFLDER, INC.**

Gabriel J. Alcantar, PE
Project Engineer

Brian E. Crystal, PE, GE
Principal Geotechnical Engineer

Dear Mr. Kahn:

Enclosed is the Phase I Environmental Site Assessment (ESA) report for the above-referenced property. We trust the information presented in this report meets your needs at this time.

An executive summary is provided. However, we recommend that the report be read in its entirety for a comprehensive understanding of the items contained therein.

We appreciate the opportunity to provide these services to Costco Wholesale. If you have questions regarding this report or if we can be of further service, please do not hesitate to contact Paolo Dizon at 949.727.4466 or Andy Franks, Kleinfelder's Client Account Manager for Costco, at 480.650.4905.

Sincerely,

**KLEINFELDER**

Paolo Dizon
Project Manager

# 1 EXECUTIVE SUMMARY

This report documents results of a Phase I Environmental Site Assessment (ESA) performed by Kleinfelder, Inc. (Kleinfelder) for Costco Wholesale Corporation (Costco / Client), of the proposed location of a Costco e-commerce facility at 16000 West Schulte Road (Site) in the City of Tracy, San Joaquin County, California. Kleinfelder understands the Client has requested a Phase I ESA be performed prior to purchasing the Site for redevelopment as an e-commerce facility.

This report was prepared using the ASTM International Designation E 1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (the "Standard Practice"), the All Appropriate Inquiry (AAI) section of the Small Business Liability Relief and Revitalization Act (the Federal Brownfields Law), and Costco's Development Requirements, Version 2014, revised June 13, 2014. The Phase I ESA findings include the following:

- The Site comprises a 103-acre parcel of land identified by the San Joaquin County Assessor as Assessor's Parcel Number (APN) 209-230-020-000. Currently, the Site is used for agricultural purposes.
- The Site was historically used for agricultural purposes (both agricultural fields and orchards) since at least 1937 through the present. Kleinfelder performed soil sampling throughout the Site to assess for the presence of pesticides and arsenic in shallow soil at the Site as a result of historical and current agricultural activities. Based on the analytical laboratory results, pesticides were not detected in shallow soil, and arsenic was detected at concentrations consistent with naturally-occurring background. Thus, the former agricultural use is not considered an environmental concern.
- A retention basin is located in the northeastern corner of the Site. A corrugated metal pipe culvert is present at the base of the retention basin. Irrigation-related standpipes were noted in the southeastern Site corner. These stand pipes appear to be gate valves for Site irrigation. Irrigation-related pipes were also noted along the southwestern Site border.
- Crimson Pipeline, L.P. operates a crude oil pipeline, and Pacific, Gas and Electric (PG&E) operates two natural gas pipelines, which run generally southeast-northwest across the northeastern portion of the Site (see Figure 2). No incidental/accidental releases were reported along the pipelines in the vicinity of the Site. However, the presence of the pipelines on Site, along with the potential for undocumented leaks to have occurred, represents a recognized environmental condition (REC).

Copyright 2018 Kleinfelder

- Discarded oil and paint thinner containers, and an empty discarded propane tank, were noted in a concrete box culvert near the southwestern border of the Site, near the Delta Mendota Canal. Debris and general household trash was noted along the northern and southern borders of the Site, and in the southeastern corner of the Site. No evidence of stained soil was noted in the vicinity of the discarded items or debris/trash.
- No off-Site facilities are considered likely to have affected soil, soil vapor or groundwater beneath the Site.

This assessment has revealed no evidence of RECs or controlled RECs (CRECs) associated with the Site, with the exception of the following:

- The presence of natural gas pipelines and the potential for undocumented leaks to have occurred from the crude oil pipeline, which run through the northeastern portion of the Site represents a REC. However, should subsurface contamination be detected in the future as a result of leaks from this pipeline, Crimson Pipeline, L.P. (or current operator at that time) would be responsible for cleanup.

# 2 INTRODUCTION

This report is a summary of work performed using the guidelines set forth in the Standard Practice, the AAI section of the Federal Brownfields Law, Costco's Development Requirements, Version 2014, revised June 13, 2014. This report also generally conforms to the Standard Practice's suggested table of contents. Minor format modifications have been made to the Standard Practice's suggested table of contents to assist in better reading and understanding the report findings.

## 2.1 PURPOSE

The purpose of this Phase I ESA is to identify, to the extent feasible pursuant to the scope of services defined in our Proposal No. MPCOSTCO.001C/IRV18P76351, dated April 6, 2018, the scope defined in the Standard Practice, and limitations discussed in this report, RECs and other environmental issues related to the Site.

As defined in the Standard Practice, an REC is:

> *"The presence or likely presence of any hazardous substances or petroleum products in, on or at a property: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."*

As defined in the Standard Practice, a de minimis condition is:

> *"A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies."*

The 2013 Standard Practice also introduced the designation of CREC. As defined in the Standard Practice, a CREC is:

> *"… a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the*

Copyright 2018 Kleinfelder

*implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."*

The 2013 Standard Practice defines an HREC as:

*"…a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to environmental controls."*

The final decision regarding whether a past release is an HREC rests with the environmental professional (EP) and will be influenced by the current impact (if any) of the past release to the Site.

This report describes Kleinfelder's assessment methodology and documents its findings, subject to the limitations presented in Section 2.5 of this report.

## 2.2 DETAILED SCOPE OF SERVICES

The following sections describe Kleinfelder's work scope:

- Section 2, **Introduction**, includes a discussion of the purpose/reason for performing the Phase I ESA, additional services requested by the Client (e.g., an evaluation of business environmental risk factors associated with the Site), significant assumptions (e.g., property boundaries if not marked in the field), limitations, exceptions, special terms and conditions (e.g., contractual), and user reliance parameters.
- Section 3, **Site Description**, is a compilation of information concerning the Site location, legal description (if provided by the Client), current and proposed use of the Site, a description of structures and improvements on the Site at the time of Kleinfelder's assessment, and adjoining property use.
- Section 4, **Records Review**, is a compilation of Kleinfelder's review of several databases available from Federal, State, and local regulatory agencies regarding hazardous substance use, storage, or disposal at the Site; and for off-Site facilities within the search distances specified by the Standard Practice. Records provided by the Client are summarized, and copies of relevant documents are included in the appendices of this report. Physical setting sources (including topography and soil and groundwater

Copyright 2018 Kleinfelder

conditions) and typical Client-provided information (e.g., title records, environmental liens, specialized knowledge, valuation reduction for environmental issues, and owner, property manager, and occupant information) are also summarized. Other interviews with people knowledgeable about the Site (including the Client) are included in Section 7.

- Section 5, **History of the Site**, summarizes the history of the Site and adjoining properties. This Site history is based on various sources, which may include a review of historical aerial photographs, Sanborn Fire Insurance Maps, city or suburban directories, historical topographic maps, building department records, and results of previous Site assessments (if any and reasonably ascertainable).
- Section 6, **Site Reconnaissance**, describes Kleinfelder's observations during the Site reconnaissance. The methodology used and limiting conditions are also described.
- Section 7, **Interviews**, is a summary of telephone and personal interviews performed with "Key Site Managers" that may include the Site owner/manager, occupants/tenants, local government officials, and the Client. Additional interview sources may be contacted if Key Site Managers were not available prior to production of this report and may include adjoining landowners and people with historical knowledge of the area.
- Section 8**, Limited Phase II ESA**, presents rationale and findings of shallow soil sampling conducted as part of a Phase II ESA to evaluate agricultural use of the Site.
- Section 9, **Evaluation**, is a presentation of findings and opinions regarding the information provided in Sections 3 through 7 and presents the conclusions regarding the presence of RECs connected with the Site, and Kleinfelder's recommendations.
- Section 10, **References**, is a summary listing of the resources used to compile this report.

A statement of qualifications of the signatories of this report is provided in Appendix A of this report, and pertinent documentation regarding the Site is included in Appendices B through E.

## 2.3 ADDITIONAL SERVICES

Kleinfelder's scope of services as part of this Phase I ESA did not include Standard Practice non-scope evaluations of cultural, historic, and archaeological resources; and environmental regulatory compliance that may be required for a Phase I ESA pursuant to Costco's Development Requirements publication (revised June 13, 2014). In addition, the Phase I ESA did not include an assessment for asbestos-containing materials (ACMs), radon, lead-based paint (LBP), lead in

Copyright 2018 Kleinfelder

drinking water, molds and mildews, indoor air quality, industrial hygiene, health and safety, and other Standard Practice non-scope considerations not described herein.

The Phase I ESA did, however, include evaluations of wetlands and surface water; and threatened, endangered, and other protected species that are required for a Phase I ESA pursuant to Costco's Development Requirements. These evaluations have not been received at the time of publication of this report, and will therefore, be submitted under separate cover. No other additional services were provided by Kleinfelder for this Phase I ESA.

## 2.4 SIGNIFICANT ASSUMPTIONS

Kleinfelder does not guarantee the accuracy of information supplied by its sources, but reserves the right to rely on the information in forming a professional opinion regarding the potential for contamination at the Site. It is assumed the Client provided Kleinfelder all applicable and available environmental records and specialized knowledge in its possession regarding the Site. Kleinfelder has not made other significant assumptions during the performance of this Phase I ESA.

## 2.5 LIMITATIONS AND EXCEPTIONS

Phase I ESAs are non-comprehensive by nature and may not identify all environmental problems, and will not eliminate all risk. This report is a qualitative assessment. Kleinfelder offers a range of investigative and engineering services to suit the needs of its clients, including more quantitative investigations. Although risk can never be eliminated, more detailed and extensive investigations yield more information, which may help the Client understand and better manage risks. Since such detailed services involve greater expense, Kleinfelder asks its clients to participate in identifying the level of service that will provide them with an acceptable level of risk. Please contact the signatories of this report if you would like to discuss this issue of risk further.

Kleinfelder performed this Phase I ESA consistent with the guidelines set forth in the Standard Practice; Costco's Development Requirements, Version 2014 (revised June 13, 2014); and the proposed scope of services subsequently approved by Costco. No other warranty, either express or implied, is made. Environmental issues not specifically addressed in this report were beyond the scope of Kleinfelder's services and not included in the evaluation.

This report may be used only by Costco and only for the purposes stated within a reasonable time from its issuance, but in no event later than one year from the date of the report. Land or facility use, on- and off-Site conditions, regulations, or other factors may change over time, and additional

Copyright 2018 Kleinfelder

work may be required with the passage of time. Since Site activities and regulations beyond Kleinfelder's control may change at any time after the completion of this report, the observations, findings, and opinions provided herein are considered valid only as of the date of the Site visit. Pursuant to Section 4.6 of the Standard Practice, this report should not be relied upon after 180 days from the date of its oldest component. Any party other than the Client who wishes to use this report shall notify Kleinfelder of such intended use. Based on the intended use of the report, Kleinfelder may require that additional work be performed and that an updated report be issued. Non-compliance with any of these requirements by the Client or anyone else will release Kleinfelder from any liability resulting from the use of this report by any unauthorized party, but only to the extent of any such non-compliance by the Client.

The Phase I ESA has been conducted in accordance with and conforms to the Costco Wholesale Development Requirements Document and the latest edition of ASTM E 1527. This assessment has been prepared for the sole use of Costco Wholesale Corporation. Its contents should not be relied upon by other parties without the express written consent of Costco Wholesale Corporation.

## 2.6 SPECIAL TERMS AND CONDITIONS

No special terms and conditions were agreed to by the Client and Kleinfelder.

DRAFT

Copyright 2018 Kleinfelder

# 3 SITE DESCRIPTION

The Site description is presented in this section and describes the condition of the Site at the time of the Phase I ESA. The Site location is shown on Figure 1. Tables 3-1 through 3-4 summarize the physical characteristics of the Site and adjoining properties.

## 3.1 LOCATION AND LEGAL DESCRIPTION

The information presented in Table 3-1 denotes the physical location and legal description of the Site. This information was obtained from review of various maps (such as topographic maps and tax assessor maps), aerial photographs, public records at City and/or County offices, interviews, and/or information provided by the Client.

**TABLE 3-1**

**Location and Legal Description**

| PARAMETER | INFORMATION/COMMENTS |
|---|---|
| LOCATION | The Site is located south of West Schulte Road, approximately 750 feet east of the intersection of West Schulte Road and Hansen Road (see Figure 1 – Site Location Map). |
| LEGAL DESCRIPTION | The legal description of the Site is presented in the EDR Environmental Lien and AUL Search report (EDR, 2018a) provided in Appendix C. |
| ASSESSOR'S PARCEL NUMBER | The Site is situated on one parcel of land identified by the San Joaquin Assessor as APN 209-230-020-000. |
| ADDRESS | The Site is associated with the street address of 16000 West Schulte Road, City of Tracy, California. |
| SECTION, TOWNSHIP, AND RANGE | Township 2 South, Range 4 East, Section 35, Mt. Diablo Base and Meridian. |
| ZONING | Based on Kleinfelder's review of online property information available on the San Joaquin County Assessor (http://sjmap.org/website/DistrictViewer/Viewer.asp), the Site is zoned "AG-40" for agricultural use. |

## 3.2 CURRENT / PROPOSED USE OF THE PROPERTY

At the time of Kleinfelder's assessment, the Site was developed with agricultural land (low-lying crops) and associated irrigation infrastructure. Current and proposed Site uses are described in Table 3-2.

Copyright 2018 Kleinfelder

**TABLE 3-2**

**Current and Proposed Uses**

| PARAMETER | GENERAL OBSERVATIONS |
|---|---|
| CURRENT USE | Agricultural land (low-lying crops). |
| PROPOSED USE | Costco e-commerce facility. |

## 3.3 DESCRIPTION OF STRUCTURES / IMPROVEMENTS

Structures and/or improvements observed on the Site at the time of Kleinfelder's reconnaissance are described in Table 3-3.

**TABLE 3-3**

**Structures and Improvements**

| PARAMETER | GENERAL OBSERVATIONS |
|---|---|
| STRUCTURES | No structures are located on the Site. |
| IMPROVEMENTS | Irrigation piping/infrastructure; Retention basin with associated corrugated metal pipe at base; Pipeline markers indicating the presence of below grade pipelines. |

## 3.4 CURRENT USES OF ADJOINING PROPERTIES

Kleinfelder performed a brief drive-by survey of the properties immediately adjoining to the Site on April 17, 2018. A summary of the observations regarding the surrounding properties is presented in Table 3-4 and shown on Figure 2, Site Vicinity Map.

**TABLE 3-4**

**Adjoining Properties**

| DIRECTION | LAND USE DESCRIPTION |
|---|---|
| NORTH | West Schulte Road and a parcel of land associated with the address of 5902 Hopkins Road. This land appeared to be under construction (e.g., graded) at the time of the Site reconnaissance. |
| EAST | Two parcels of land associated with the addresses 15580 and 15178 West Schulte Road, used for agricultural purposes (fields). |

DRAFT

Copyright 2018 Kleinfelder

**Table 3-4 (Continued)**

**Adjoining Properties**

| DIRECTION | LAND USE DESCRIPTION |
|---|---|
| SOUTH; SOUTHWEST | Delta Mendota Canal and a parcel of land associated with the address 26301 South Hansen Road, used for agricultural purposes (orchards). A box culvert and canal flume are located along the southwestern Site border. |
| WEST | Two parcels of land associated with the addresses 16310 and 16286 West Schulte Road adjoin the Site to the west. The property identified as 16310 West Schulte Road adjoins the northwestern corner of the Site and appeared to be developed with a communications facility. The property identified as 16286 West Schulte Road adjoins the remaining portions and consisted of agricultural (fields) with farm-related structures. |

Properties surrounding the Site appeared to be used for agricultural purposes. Farm-related structures are located west of the Site, on the property that is north of the Delta Mendota Canal. Various aboveground storage tanks (ASTs) were visible on the property to the west of the Site; some appeared empty, while others appeared to be in use. However, these ASTs did not appear immediately adjacent to the western Site boundary and are not considered to be an environmental concern to the Site. Discarded oil and paint thinner containers were noted in the concrete box culvert near the canal flume adjacent to the southwestern Site boundary. In addition, a discarded propane tank was noted just east of the box culvert. No evidence of soil staining was observed beneath these discarded items. A possible backup generator was noted approximately 120 feet west of the Site, associated with the adjoining communications facility to the west. No associated fuel tank was noted to be associated with this generator. No other indications of obvious or suspect RECs were apparent on the adjoining properties at the time of Kleinfelder's Site reconnaissance that are considered likely to affect soil, soil vapor or groundwater beneath the Site.

DRAFT

Copyright 2018 Kleinfelder

# 4 RECORDS REVIEW

## 4.1 STANDARD ENVIRONMENTAL RECORD SOURCES

The purpose of the records review is to obtain and review records that would help to evaluate RECs in connection with the Site and bordering properties. Federal, State, and local regulatory agencies publish databases or "lists" of businesses and properties that handle hazardous materials or hazardous waste, or are the known location of a release of hazardous substances to soil and/or groundwater. These databases are available for review and/or purchase at the regulatory agencies, or the information may be obtained through a commercial database service. Kleinfelder contracted a commercial database service, EDR, of Shelton, Connecticut, to perform the government database search for listings within the appropriate Standard Practice minimum search distance of the Site, and the distances set forth in Costco's Development Requirements, Version 2014, revised June 13, 2014. Kleinfelder provided EDR with a Site map to incorporate the search distances from the Site boundary. Included in the EDR Radius Map™ Report with GeoCheck® (EDR, 2018b) is a listing of specific databases outlined by the Standard Practice. If required, the search distances included an extended radius from those specified by the Standard Practice. A listing of the search distances, databases evaluated, dates the databases were last updated, and types of information contained in each database are included in the regulatory database search report provided in Appendix B of this report.

EDR utilizes a geographical information system to plot the locations of reported spills, leaks, incidents, etc. Kleinfelder reviews this information to help establish if the Site or nearby properties are listed in the databases and lists. Each of the listings was reviewed by Kleinfelder to assess whether the corresponding property details included in EDR's report revealed a potential environmental impact to the Site. Many listings in the report were concluded not to have the potential to impact the Site based on the following, or a combination thereof:

- The listed property is located at a distance where the facility is unlikely to impact the Site based on Kleinfelder's evaluation of the relevant data in EDR's report and knowledge of the Site vicinity.
- The listed property is located in a down-gradient or cross-gradient direction from the Site, based on the anticipated direction of groundwater flow (northeast) at the property being evaluated, and is located at a distance such that it is unlikely to impact the Site. Note that the groundwater flow direction is estimated to be to the northeast, based on review of

Copyright 2018 Kleinfelder

available information, and judgements as to down- or cross-gradient direction are best made if groundwater flow direction information is available for a specific property.

- The listed property is identified in the underground storage tank (UST) or Small Quantity Generator (SQG) databases and does not immediately adjoin the Site. The property is furthermore not listed in other databases that report a release of a hazardous substance or petroleum product and/or is not listed as having environmental violations. The listing of a facility in these databases alone is not indicative of an unauthorized release.
- The listing for the facility suggested a short-term release occurred (e.g., from incidental traffic accidents or involving limited quantities of chemicals from illegal drug labs found at residences), with associated response actions completed.
- The quantity of the hazardous substances or petroleum product released from an off-Site, non-adjoining facility was not judged to have resulted in contamination above the most stringent criteria requiring regulatory action. Therefore, no impact to the Site is anticipated.
- The listed property record indicates that the property was characterized, the reported release affected soil only, the listed property was not on or adjacent to the Site, and the release was not recognized as indicative of area-wide conditions or was characterized as a soil removal action only.
- The listed property record indicates that contamination on the property is limited to relatively non-mobile contaminants, including polyaromatic hydrocarbons and metals, in soil only, on a non-adjacent property.
- The listed property record indicates that the case for the property has been closed to the satisfaction of the designated lead regulatory agency, and residual contamination, if present, is not considered likely to affect the Site based on one or more of the criteria mentioned in the bulleted items above (a condition referred to by the Standard Practice as an HREC).

Based on these criteria indicating no material threat of a release that affected the Site and/or no release that could require future regulatory agency oversight, the listings concluded not to have the potential to impact the Site were not evaluated further and are not discussed in the following sections.

DRAFT

Copyright 2018 Kleinfelder

## 4.2 RESULTS OF DATABASE SEARCH

The remaining property listings were reviewed to assess whether these properties had environmental releases that may have resulted in RECs in relation to the Site. If the listed properties had a reported release which may have resulted in an REC, the property was further assessed by performing a review of agency files available via the GeoTracker™ website (http://geotracker.waterboards.ca.gov/) of the State Water Resources Control Board (SWRCB) and/or other relevant regulatory agency websites to evaluate whether the listed release represents a potential impact to the Site.

### 4.2.1 Site Listings

The Site was not listed in databases searched by EDR.

### 4.2.2 Off-Site Listings

Three off-Site properties were listed in standard Federal, State, and local lists within the Standard Practice search distances and the distances set forth in Costco's Development Requirements, Version 2014, revised June 13, 2014. Kleinfelder reviewed the listing information to assess the potential for impacts to soil, soil vapor, and groundwater beneath the Site. The following summarizes the information for these facilities.

- *"Shell Pipeline Co LP Location No. 805248 Drum Location" and "Shell Oil Company" (West Schulte Road and Hansen Road)* – These listings represent one facility. It was listed as a SQG of hazardous waste in the year 2012, having disposed of ignitable, "benzene" waste. No violations were reported for this facility. The facility was also listed in the Spills, Leaks, Investigations, and Cleanup (SLIC) database as having had a reported release of total petroleum hydrocarbons ("TPH"). Details were not provided in the database listing information. However, based on information obtained from the SWRCB GeoTracker™ database, the release associated with this facility occurred over 3,500 feet to the north of the Site. Soil and groundwater impacts associated with a crude oil release from pipelines appear to be limited in extent, and based on the distance of this release to the Site, this listing is not considered likely to have impacted soil, soil vapor or groundwater beneath the Site.
- *"Tracy Youth Sports Park" (15178 Schulte Road)* – This facility partially adjoins the Site to the east. It is listed in the SLIC database as having had a release (substance not reported)

Copyright 2018 Kleinfelder

that affected soil. A link to the SWRCB GeoTracker™ case for this facility was provided in the EDR database report (see Section 4.3.3 for further discussion).

### 4.2.3 Orphan List

Facilities not plotted by EDR due to poor or inadequate address information are referred to as orphan sites. No unmapped orphan sites are listed in the EDR report.

## 4.3 OTHER RECORDS REVIEWED / AGENCIES CONTACTED

The following additional sources of environmental records were reviewed during this Phase I ESA for the purposes of meeting the Standard Practice. Local regulatory agencies were contacted for reasonably ascertainable and practically reviewable documentation regarding RECs present at the Site and adjoining facilities. Summaries of interviews with local regulatory agency representatives, when performed, are included in Section 7 of this report (with interview documentation included in Appendix C). The following agencies (if marked with an "X") were contacted for documentation:

- ☒ San Joaquin County Environmental Health Department (SJCEHD)
- ☒ City of Tracy, Building Safety Division
- ☒ State Water Resources Control Board (SWRCB) / GeoTracker™ Database
- ☒ Pipeline and Hazardous Materials Safety Administration (PHMSA), National Pipeline Mapping System (NPMS)
- ☒ State Department of Toxic Substances Control (DTSC) / EnviroStor Database
- ☒ San Joaquin Valley Air Pollution Control District (SJVAPCD)

Information obtained from these agencies is summarized below.

### 4.3.1 San Joaquin County Environmental Health Department

Kleinfelder submitted a written request to the SJCEHD on April 16, 2018 for information pertaining to hazardous materials usage and storage, including AST and UST records for the Site. Based on an April 17, 2018 email from Dom Martorella, Office Assistant Specialist with the SJEHD, no records are on file associated with the Site. A copy of the SJCEHD response is provided in Appendix C.

DRAFT

Copyright 2018 Kleinfelder

### 4.3.2 City of Tracy, Building Safety Division

Since no structures have historically been present on the Site, a review building permits at the City of Tracy, Building Safety Division was not performed as part of this Phase I ESA. EDR provided an EDR Building Permit Report (EDR, 2018g) for the Site. A search of building permit information by EDR did not identify building permits for the Site. A copy of the EDR Building Permit Report is provided in Appendix C.

### 4.3.3 State Water Resources Control Board / GeoTracker™ Database

Kleinfelder reviewed the SWRCB GeoTracker™ website (http://geotracker.waterboards.ca.gov/) on April 16, 2018 for information associated with releases of hazardous materials or substances at the Site. No listings associated with the Site were included in databases maintained by the SWRCB. One listing was noted for an adjoining property. A summary is provided below.

*"Tracy Youth Sports Park" (15178 Schulte Road)* – This property partially adjoins the Site to the east. A July 24, 2013 "No Further Action Required Letter" was prepared by the Central Valley Regional Water Quality Control Board (RWQCB), which indicated the RWQCB had no files associated with this case. The letter stated that in June 2006, the City of Tracy prepared an Environmental Impact Report to evaluate the potential environmental impacts from a proposed development of a youth sports park (e.g., baseball, softball, soccer fields, sports/football stadium, and a recreation area) at this location. Environmental impacts noted included increased traffic and regional air quality impacts, and the presence of two PG&E transmission pipelines and one Chevron crude oil pipeline beneath the property. The proposed sports park development was rejected by the City in December 2007. The case for this facility was reportedly open in GeoTracker™ on September 1, 2007 following receipt of the Environmental Impact Report. However, the RWQCB indicated it would not be activating the case and considers the case closed.

Based on the information provided in the SWRCB GeoTracker™ database, the listing associated with the Tracy Youth Sports Park is not considered an environmental concern to the Site. Information associated with this facility is provided in Appendix C.

### 4.3.4 Pipeline and Hazardous Materials Safety Administration, National Pipeline Mapping System

Pipeline information is available at the PHMSA's online NPMS website (https://www.npms.phmsa.dot.gov). Kleinfelder researched pipeline information on the website on

Copyright 2018 Kleinfelder

April 16, 2018 for the Site. Based on Kleinfelder's review of the NPMS website, the following pipelines are present beneath the Site.

- Crimson Pipeline, L.P. operates a crude oil pipeline, identified as Los Medanos Pipeline ID 499, which runs generally southeast-northwest across the northeastern portion of the Site. The NPMS database does not list accidental releases along this pipeline near the Site. Kleinfelder also forwarded a request to Crimson Pipeline, L.P. for information regarding potential accidental releases or incidents along their pipeline beneath the Site. A response has not been received as of the date of this report.
- PG&E operates two natural gas pipelines, identified as Pipeline IDs 002_481377 and 401-1422906, which run generally southeast-northwest across the northeastern portion of the Site. No incidents were reported along these natural gas pipelines.

These pipelines appear to pass through the northeastern portion of the Site within and near a PG&E easement depicted on the San Joaquin County Assessor's parcel map (see Figure 2). Although releases were not reported along Crimson Pipeline, L.P.'s crude oil pipeline, the potential exists for undocumented releases to have occurred, which represents a REC. A copy of the NPMS map is included in Appendix C.

#### 4.3.5 State Department of Toxic Substances Control / EnviroStor

Kleinfelder reviewed the DTSC EnviroStor website (http://www.envirostor.dtsc.ca.gov/) on April 16, 2018 for information pertaining to the Site and adjoining properties. Based on Kleinfelder's review of the website, no listings were found pertaining to the Site or for properties immediately adjoining to the Site.

#### 4.3.6 San Joaquin Valley Air Pollution Control District

Kleinfelder submitted a written request for information pertaining to the Site to the SJVAPCD on April 16, 2018. Based on a response from Ms. Theresa Haywood, Senor Office Assistant with the SJVAPCD, no records are available for the Site. A copy of the SJVAPCD response is provided in Appendix C.

### 4.4 PHYSICAL SETTING SOURCE(S)

Table 4-2 presents information concerning the physical setting of the Site. The information was primarily obtained from published maps.

Copyright 2018 Kleinfelder

**TABLE 4-2**

**Physical Setting**

| DATA | GENERAL INFORMATION |
|---|---|
| USGS TOPOGRAPHIC QUADRANGLE | Based on the United States Geological Survey (USGS) Midway Quadrangle 7.5-Minute Series (Topographic) Map, dated 1980, the Site elevation ranges from approximately 185 feet above Mean Sea Level (MSL) near the southwest portion of the Site, to 150 feet above MSL at the northeastern corner of the Site. Topography in the vicinity of the Site slopes to the northeast. |
| SOIL TYPE | The Site is located within the Tracy Subbasin, which is comprised of continental deposits of Late Tertiary to Quaternary age. These deposits include the Tulare Formation (semi-consolidated, poorly-sorted, discontinuous deposits of clay, silt and gravel), Older Alluvium (loosely- to moderately-compacted sand, silt and gravel deposited in alluvial fans), Flood Basin Deposits (silts and clays, with occasional interbeds of gravel), and Younger Alluvium (unconsolidated silt, fine-to medium-grained sand, and gravel) (California Department of Water Resources [CDWR], 2006). |
| OIL AND GAS WELLS | Information concerning oil and gas fields was obtained by Kleinfelder from published maps available for download on the Division of Oil, Gas, and Geothermal Resources (DOGGR)'s internet web site (http://maps.conservation.ca.gov/doggr/index.html). Kleinfelder researched oil well information on the DOGGR website on April 16, 2018 for the Site and Site vicinity. Based on Kleinfelder's review, no oil wells are located on the Site or in the immediate Site vicinity. The nearest well is located approximately 1,500 feet northeast of the Site. |

Table 4-3 presents information concerning regional geology and hydrogeology. The information was obtained from published maps and other sources.

**TABLE 4-3**

**Regional Geology and Hydrogeology**

| PHYSICAL PARAMETER | INFORMATION/COMMENTS |
|---|---|
| REGIONAL PHYSIOGRAPHY AND GEOLOGY | The Site is located in Great Valley Geomorphic Province of California, which is a broad structural trough bound by the Sierra Nevada on the east and the Coast Ranges on the west. The Great Valley is a trough in which sediments have been deposited almost continuously since the Jurassic (California Geological Survey [CGS], 2002). |
| REGIONAL HYDROGEOLOGY | The Site is located in the San Joaquin Valley Groundwater Basin, Tracy Subbasin, which is defined by the areal extent of unconsolidated to semi-consolidated sedimentary deposits that are bound by the Diablo Range on the west, the Mokelumne and San Joaquin Rivers on the north, the San Joaquin River to the east, and the San Joaquin-Stanislaus County line on the south. The Subbasin is drained by the San Joaquin River and one of its major westside tributaries – Corral Hollow Creek. The San Joaquin River flows northward into the Sacramento and San Joaquin Delta and discharges into the San Francisco Bay (CDWR, 2006). |

Copyright 2018 Kleinfelder

**TABLE 4-3 (Continued)**

**Regional Geology and Hydrogeology**

| PHYSICAL PARAMETER | INFORMATION/COMMENTS |
|---|---|
| DEPTH TO GROUNDWATER DIRECTION OF ANTICIPATED FLOW [1] | Based on a Contour Map of Spring 2005 Unconfined Aquifer Groundwater Levels dated January 2007, depth to groundwater is indicated to be approximately 50 to 55 feet above MSL (approximately 130 feet to 95 feet below ground surface) and is anticipated to flow generally to the northeast beneath the Site (City of Tracy, 2007). |
| REGIONAL GROUNDWATER QUALITY PROBLEMS | Groundwater quality in the City of Tracy is considered of decent quality with some local problem constituents including total dissolved solids, nitrates, boron, chloride, and sulfate (City of Tracy, 2007). Regional groundwater quality problems were not identified beneath the Site. |
| WATER SUPPLY | The well search performed by EDR indicated no private or public water supply wells are located on the Site, or within ¼-mile of the Site (EDR, 2018b). |
| FLOOD ZONE DESIGNATION | According to The EDR Radius Map™ Report with GeoCheck®, the Site is not located within a 100-year or 500-year flood zone (EDR, 2018b). |

[1] Groundwater flow direction is based on regional information sources. Site-specific conditions may vary due to a variety of factors including geologic anomalies, utilities, nearby pumping wells (if present), and others.

## 4.5 USER PROVIDED INFORMATION

According to the Client, the purpose for performing this Phase I ESA is to evaluate the potential for RECs at the Site prior to purchasing the Site for redevelopment as an e-commerce facility. Information regarding the current owners/occupants of the Site is summarized in Table 4-4.

**TABLE 4-4**

**Owner and Occupant Information**

| ENTITY | NAME |
|---|---|
| OWNER | Based on the EDR Environmental Lien and AUL Search report (EDR, 2018a), the Site is vested in “Allen E Hom Trustee”. |
| OCCUPANT(S) | The Site is an agricultural field. |

Summaries of interviews of key individuals with knowledge of the Site (“Key Site Managers”) are provided in Section 7. The following sections present information provided to Kleinfelder by the Client.

## 4.6 TITLE RECORDS

Chain-of-title information was not provided by the Client. Therefore, a review of a chain-of-title report was not reviewed as part of this Phase I ESA.

Copyright 2018 Kleinfelder

## 4.7 ENVIRONMENTAL LIENS AND USAGE LIMITATIONS

According to information provided in EDR's regulatory agency database search report (EDR, 2018b), there are no liens pertaining to the Site listed in the Federal superfund liens list maintained by the United States Environmental Protection Agency (US EPA), nor known recorded land-use environmental deed restrictions pertaining to the Site listed in the State Liens Database. Kleinfelder's review of the EDR Environmental Lien and AUL Search report (EDR, 2018a) for the Site indicates there are no environmental liens or activity and use limitations (AULs) associated with the Site.

## 4.8 VALUE REDUCTION

As part of the Standard Practice process, information is to be gathered regarding the prospective purchase price of the Site relative to its fair market value. If there appears to be a value reduction, that reduction must be identified with respect to whether the difference may be attributed to environmental degradation of the property. Based on a questionnaire completed by Mr. Peter Kahn of Costco on April 11, 2018, the purchase price of the property reflects the fair market value. A copy of the completed questionnaire is provided in Appendix C.

## 4.9 OTHER INFORMATION / DOCUMENTS PROVIDED

Information and other documents pertaining to the Site were not available for review.

DRAFT

Copyright 2018 Kleinfelder

# 5 SITE HISTORY

The history of the Site was researched to identify obvious uses. Historical land use was researched to the first developed use, or back to 1940, whichever was earlier or readily available. Table 5-1 summarizes the availability of information reviewed during this assessment.

**TABLE 5-1**

**Historical Information Sources**

| SOURCE | YEARS REVIEWED | SOURCE / AVAILABILITY |
|---|---|---|
| SANBORN FIRE INSURANCE MAPS | Not available | EDR, 2018c |
| AERIAL PHOTOGRAPHS | 1937, 1940, 1949, 1957, 1963, 1968, 1975, 1982, 1993, 2006, 2010, 2014 | EDR, 2018d |
| CITY DIRECTORIES | 1959 – 2014 (select years) | EDR, 2018e |
| HISTORICAL TOPOGRAPHIC MAP REPORT | 1907, 1916, 1922, 1942, 1943, 1947, 1953, 1968, 1980, 2012 | EDR, 2018f |
| BUILDING DEPARTMENT | Not available | EDR, 2018g |
| PREVIOUS ASSESSMENT(S) | Not applicable | Not available |

## 5.1 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance Maps provide historical land use information for some metropolitan areas and small, established towns. Kleinfelder requested EDR to search its library of Sanborn Fire Insurance Maps for maps of the Site. EDR responded that Sanborn Fire Insurance Maps were not available for the Site (EDR, 2018c).

## 5.2 AERIAL PHOTOGRAPHS

A review of historical aerial photography may indicate past activities at a property that may not be documented by other means or observed during a reconnaissance visit. The effectiveness of this technique depends on the scale and quality of the photographs and the available coverage. Aerial photographs were obtained from several historical photograph collections through EDR (2018d) and span a period of 77 years. A tabulation of the aerial photographs reviewed by Kleinfelder is

Copyright 2018 Kleinfelder

presented in Table 5-2. Copies of the aerial photographs provided by EDR are included in Appendix D.

**TABLE 5-2**

**Historical Aerial Photographs Reviewed**

| YEAR | APPROXIMATE SCALE | SUMMARY |
|---|---|---|
| 1937 | 1" = 500' | **Site:** The Site appeared to be used for agricultural purposes (possibly orchards). A natural drainage was apparent passing through the central portion of the Site in a general southwest-northeast direction.<br><br>**Surrounding Area:** West Schulte Road was apparent adjoining to the north of the Site. Several residential or farm-related structures are apparent adjoining to the west of the Site. Remaining adjoining properties appeared to be used for agricultural purposes. |
| 1940 | 1" = 500' | **Site:** The Site appeared to be used for agricultural purposes, although orchards were not apparent.<br><br>**Surrounding Area:** Adjoining properties appeared to be used for agricultural purposes, with residential or farm-related structures apparent on the property to the west. |
| 1949<br>1957<br>1963 | 1" = 500' | **Site:** The Site may have been vacant in 1949, but in the 1957 and 1963 aerial photographs, agricultural use was apparent. A possible small retention pond is apparent in the northeast corner of the Site in the 1957 and 1963 aerial photographs.<br><br>**Surrounding Area:** The Delta Mendota Canal, including an apparent canal flume, were apparent adjoining the southwestern Site boundary. Adjoining properties appeared to remain developed for agricultural purposes, except for the property southwest of the Site, beyond the canal, which appeared vacant. Structures remained apparent on the property that adjoined to the west. |
| 1968 | 1" = 500' | **Site:** The Site appeared to be developed for agricultural purposes (orchards). The natural drainage was not apparent.<br><br>**Surrounding Area:** The surrounding properties appeared similar to that shown in the previously-reviewed aerial photographs. |
| 1975<br>1982 | 1" = 500' | **Site:** The Site appeared the same as in the 1968 aerial photograph. However, an unimproved road appears to pass through the northeastern corner of the Site, in the approximate location of the pipeline right-of-way previously discussed.<br><br>**Surrounding Area:** The surrounding properties appeared generally the same as on the previously-reviewed aerial photograph. |

Copyright 2018 Kleinfelder

**TABLE 5-2 (Continued)**

**Historical Aerial Photographs Reviewed**

| YEAR | APPROXIMATE SCALE | SUMMARY |
|---|---|---|
| 1993 | 1" = 500' | **Site:** The Site appeared to remain agricultural, although the Site appears to consist of low-lying crop fields. Construction along the unimproved road (pipeline alignment) through the northeastern corner of the Site was apparent in the 1993 aerial photograph. Sections of piping, heavy equipment, excavated soils, and what appeared to be material staging areas were visible.<br><br>**Surrounding Area:** The surrounding properties appeared generally the same as on the previously-reviewed aerial photographs, with the exception of apparent pipeline construction activities along the alignment, similar to that taking place at the Site. |
| 2006<br>2010<br>2012 | 1" = 500' | **Site:** The Site appeared the same as on the previously-reviewed aerial photographs. However, the unimproved road and construction through the northeastern corner of the Site was no longer apparent.<br><br>**Surrounding Area:** The surrounding properties appeared generally the same as on the previously-reviewed aerial photographs, with little to no visible indication of the pipeline alignment. |
| Note: Aerial photographs only provide information concerning indications of land use, and no conclusions regarding the release of hazardous substances or petroleum products can be drawn from the review of photographs alone. | | |

Although not considered a REC pursuant to the Standard Practice, residual pesticides may be present in shallow soil beneath the Site. The unimproved road noted on aerial photographs between 1975 and 1993 follows the alignment of an existing PG&E right-of-way easement noted on the San Joaquin County Assessor's parcel map (see Appendix C).

## 5.3 CITY DIRECTORIES

City directories provide information regarding property occupants by address. EDR provided a city directory image report (EDR, 2018e), included in Appendix D, which included a search of city directories for the period between 1959 and 2014. West Schulte Road was listed in city directories between 1975 and 2014; however, the Site address was not listed in city directories reviewed. Adjoining properties along West Schulte Road were also not listed in city directories reviewed.

Copyright 2018 Kleinfelder

## 5.4 HISTORICAL TOPOGRAPHIC MAP REVIEW

Kleinfelder obtained information regarding historical topographic maps of the Site vicinity from EDR (2018f). The topographic maps reviewed for this assessment are listed in Table 5-3 and copies of the maps are included in Appendix D.

**TABLE 5-3**

**Historical Topographic Maps Reviewed**

| YEAR | SCALE | SUMMARY |
|---|---|---|
| 1907 | 1:62,500 | **Site:** The Site was depicted undeveloped.<br><br>**Surrounding Area:** A road was apparent adjoining to the north of the Site. Adjoining properties were shown as undeveloped land, except for a residential-type structure located on the property to the west. |
| 1916 | 1:31,680 | **Site:** The Site was the same as on the 1907 map. A natural drainage channel was shown entering the Site near the southwestern portion toward the central portion.<br><br>**Surrounding Area:** The Site vicinity was shown generally the same as on the 1907 map. |
| 1922 | | **Site:** The Site was not covered on the 1922 map.<br><br>**Surrounding Area:** The adjoining properties were not covered on the 1922 map. |
| 1942<br>1943 | 1:62,500 | **Site:** The Site was the same as on the 1907 and 1916 maps, although the natural drainage that entered the Site as shown on the 1916 map was not shown on the 1942 and 1943 maps.<br><br>**Surrounding Area:** The Site vicinity was shown generally the same as on the 1916 map. A natural drainage was shown near the northwestern corner of the Site. |
| 1947 | | **Site:** The Site was not covered on the 1947 map.<br><br>**Surrounding Area:** The adjoining properties were not covered on the 1947 map. |

DRAFT

Copyright 2018 Kleinfelder

**TABLE 5-3 (Continued)**

**Historical Topographic Maps Reviewed**

| YEAR | SCALE | SUMMARY |
|---|---|---|
| 1953<br>1968 | 1:24,000 | **Site:** The natural drainage was again depicted on the 1953 map, passing generally southwest-northeast through the central portion of the Site.<br><br>**Surrounding Area:** West Schulte Road was shown adjoining to the north of the Site. Adjoining properties to the north, east and south were undeveloped. The Delta Mendota Canal was shown adjoining the southwestern Site boundary. A canal flume was depicted adjoining to the Site, in the canal. Seven structures were shown on the property that adjoined to the west, just north of the canal. |
| 1980 | 1:24,000 | **Site:** The Site was depicted to be developed for agricultural use (orchards). The on-Site natural drainage was still shown.<br><br>**Surrounding Area:** Changes to the Site vicinity included the presence of agricultural land on the properties that adjoined to the north, beyond West Schulte Road, and to the southwest, beyond the Delta Mendota Canal. Some structural changes were noted on the property that adjoined to the west, just north of the canal. |
| 2012 | 1:24,000 | **Site:** The 2012 topographic map depicted roads and other physical features, but did not depict structures in the area. The natural drainage feature on Site was shown.<br><br>**Surrounding Area:** West Shulte Road, a natural drainage near the northwestern corner of the Site, and the Delta Mendota Canal were shown on the map. Structures and other features were not shown. |

## 5.5 BUILDING DEPARTMENT

EDR provided an EDR Building Permit Report (EDR, 2018g) for the Site. Permits for the Site were not found in records reviewed by EDR.

## 5.6 PREVIOUS ASSESSMENTS

Previous environmental assessments were not available for the Site.

DRAFT

Copyright 2018 Kleinfelder

# 6 SITE RECONNAISSANCE

Kleinfelder's Phase I ESA activities included a Site reconnaissance. This section summarizes the findings from the Site reconnaissance.

## 6.1 METHODOLOGY AND LIMITING CONDITIONS

Mr. Anthony Wohletz and Mr. Curtis Conti of Kleinfelder performed a Site reconnaissance on April 17, 2018. The Site reconnaissance included a visual inspection of the Site to assist in identifying the presence or likely presence of hazardous substances or petroleum hydrocarbons under conditions that indicate an existing release, a past release, or threat of release into structures, soil, groundwater, or surface water at the Site (i.e., RECs). Observations of readily-apparent environmental conditions are summarized in Table 6-1, and color photographs of the Site are presented on Figures 3 through 15. The approximate Site boundaries are shown on Figure 2. Mr. Wohletz and Mr. Conti were not accompanied during the Site reconnaissance.

## 6.2 GENERAL SITE SETTING

The Site is located at 16000 West Schulte Road, approximately 750 feet east of the intersection of West Schulte Road and South Hansen Road in the City of Tracy, California. At the time of the Site reconnaissance, surrounding properties appeared to be primarily developed for agricultural purposes. Commercial/light industrial properties are present farther west of the Site.

## 6.3 SITE OBSERVATIONS

Kleinfelder's Site observations are summarized in Table 6-1.

**TABLE 6-1**

**Site Observations**

| GENERAL OBSERVATIONS | REMARKS | OBSERVED | NOT OBSERVED |
|---|---|---|---|
| Current use | Agricultural land. | X | |
| Current use likely to indicate RECs | Although not considered a REC pursuant to the Standard Practice, the potential exists for pesticides to be present in shallow soil beneath the Site. | | X |
| Past use | The Site was historically used for agricultural purposes since at least 1937 through the present. | | X |

DRAFT

## 6.4 RESULTS OF SITE RECONNAISSANCE

The Site consists of a 103-acre parcel of land that is currently unpaved, agricultural land that was covered at the time of the reconnaissance with grasses. The Site is relatively flat, with 0.5- to 1-foot-tall rows of soil about 1.5 to 2.5 feet wide, running north/south every approximately 25 feet. At the time of the reconnaissance, soil was generally moist and not loose.

Copyright 2018 Kleinfelder

A retention basin is present in the northeastern Site corner. The basin is surrounded by mounds of dirt that appear to be retention basin excavation spoils. A corrugated metal pipe was noted in the deepest portion of the basin, and an approximately 4- to 5-foot wide and 1.5- to 2-foot deep ditch runs along the northern Site boundary and into the western end of the basin. It appears the basin is used for Site drainage.

Irrigation-related standpipes were noted in the southeastern Site corner. These stand pipes appear to be gate valves for Site irrigation. Scattered debris, including a discarded mattress, was also noted in the southeastern Site corner.

A communications station/facility was noted immediately west of the northwestern Site corner. A stained pole-mounted transformer was noted off Site, near the northwest facility corner, but did not impact the Site. Also, a potential backup generator was noted in the southwestern facility corner, about 120 feet west of the Site. No associated fuel AST was noted.

Agricultural, agricultural/industrial, and residential properties were noted immediately west of the Site. Apparent storage ponds were noted about 600 feet north of the canal. These apparent ponds were empty at the time of the Site reconnaissance. Multiple agricultural structures were noted immediately west of the Site, south of the ponds. These structures include likely garages/shops/barns, animal-related housing, and potential silos. Residential structures were also noted.

Various ASTs, agricultural equipment, and other agricultural supplies were noted in the agricultural/industrial properties just west of the southern half of the Site. Multiple ASTs appeared to be empty and not in use; however, at least four ASTs appeared to be in use, and one appeared to be used for propane. These ASTs, however, were only visible from a distance.

An apparent flood control structure was noted along the southwestern Site border. The structure spans across the top of the Delta Mendota Canal and includes an approximately 5-foot-wide concrete-box culvert. It appears the structure allows excess water to be drained from the canal to the Site. Discarded oil and paint thinner containers were noted in the concrete box culvert, and a discarded propane tank was noted east of the culvert. Irrigation-related pipes were also noted along the southwestern Site border.

Communication utility vaults were noted just east of the Site, along the eastern Site border, and petroleum utility signs were noted along the eastern Site border, about 450 feet south of the northeastern Site corner. Petroleum utility signs were also noted along the northern Site border,

Copyright 2018 Kleinfelder

about 525 feet west of the northeastern Site corner. It appears petroleum utilities; therefore, pass across the northeastern Site corner.

Evidence of discolored water, stressed vegetation, USTs, ASTs, wells, pits, ponds (other than the retention basin), or lagoons was not observed on the Site during the reconnaissance.

# 7 INTERVIEWS

Key Site Managers are contacted to obtain current and historical environmental information concerning the Site. The following sections highlight information revealed during the interviews.

## 7.1 INTERVIEW WITH CLIENT

Kleinfelder submitted a Phase I ESA User Questionnaire to the Client. Based on information provided in the questionnaire, Costco is not aware of environmental cleanup liens or AULs associated with the Site. Costco does not have specialized knowledge of the Site, but indicated previous use of the Site was agricultural.

## 7.2 INTERVIEW WITH OWNER/MANAGER

A questionnaire was provided to the Client to forward to the appropriate owner or manager associated with the Site. To date, a completed questionnaire has not been received.

## 7.3 INTERVIEWS WITH LOCAL GOVERNMENT OFFICIALS

Based on the information obtained as part of the Phase I ESA research, interviews with local government officials was not deemed necessary for this Phase I ESA.

DRAFT

Copyright 2018 Kleinfelder

Based on the use of the Site for agricultural purposes, Kleinfelder collected shallow soil samples in a grid pattern from across the Site to assess the presence of pesticides and arsenic in shallow soil. Soil samples were collected pursuant to the DTSC Interim Guidance for Sampling Agricultural Properties (Third Revision), dated August 7, 2008, which recommends 60 shallow soil sample locations for the first 50 acres. As the Site is 103 acres in size, Kleinfelder collected an additional sample per acre (53), plus three additional samples based on a completed grid pattern for the Site, for a total of 116 discrete soil sample locations. The soil sampling methodology and analysis is described below. A table summarizing the soil sample analytical results, a figure showing the sample locations, and the soil sample laboratory report are included in Appendix E.

## 8.1 SOIL SAMPLING METHODOLOGY

Kleinfelder collected soil samples for environmental analysis from 116 locations at the Site. Soil samples were collected from approximately 0.5-foot bgs using a hand trowel. Soil intended for laboratory analysis was transferred into laboratory-provided wide-mouth glass jars with securely-fitting lids. The sample jars were labeled, promptly placed in a water ice-chilled cooler, and transported accompanied by chain-of-custody to a subcontracted, California-accredited analytical testing laboratory for analysis.

Sampling equipment was cleaned prior to collecting each sample by washing in a non-phosphate detergent (i.e., Liquinox™) and tap water wash, using a brush to dislodge soil, dirt, or other encrusted materials, and then double-rinsing in distilled or deionized water.

## 8.2 SOIL SAMPLE ANALYSIS

Soil samples were analyzed for organochlorine pesticides (OCPs) using US EPA Method 8081A and arsenic using US EPA Method 6010B.

## 8.3 SOIL SAMPLE RESULTS

Soil sample analytical results indicated that OCPs were not present above laboratory detection limits in shallow soils at the Site. Arsenic concentrations present in soil ranged from 2.3 milligrams per kilogram (mg/kg) to 4.3 mg/kg.

Copyright 2018 Kleinfelder

## 8.4 EVALUATION

The soil analytical results were compared to the San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) "Tier 1" Environmental Screening Level (ESL) for arsenic, last updated in February 2016. The SFBRWQCB's "Tier 1" ESLs, were designed to protect properties with unrestricted land and water use, addressing media including soil, groundwater, and soil vapor, along with a range of concerns including direct exposure human health risks, impact to drinking water, vapor intrusion, and impact to aquatic life. Use of the Tier 1 ESLs applies the most conservative ESL for the constituent of concern. The soil analytical results were also compared to human-health risk-based screening levels for residential and commercial/industrial soil presented in the California Environmental Protection Agency, DTSC, Office of Human and Ecological Risk (HERO) Human Health Risk Assessment (HHRA) Note Number (No.) 3, last updated in January 2018 (and corrected February 2018), for arsenic.

Also, in consideration of concentration thresholds for California and Federal hazardous waste, the detected concentrations of arsenic were compared to: 1) its California Code or Regulations (CCR) Title 22 Total Threshold Limit Concentration (TTLC); 2) 10 times the arsenic CCR Title 22 Soluble Threshold Limit Concentration (STLC); and 3) 20 times the arsenic Federal Toxicity Characteristic Leaching Procedure (TCLP) threshold.

Arsenic concentrations at the Site exceed the arsenic Tier 1 ESL value of 0.067 mg/kg and the DTSC HERO HHRA residential and commercial/industrial soil screening levels of 0.11 mg/kg and 0.4 mg/kg, respectively. However, it has been acknowledged by regulatory agencies, including the DTSC, that background concentrations of arsenic in soils in California commonly exceed established arsenic human-health risk-based screening levels. Reported concentrations are within generally-accepted southern California upper-bound background arsenic concentration of 12 milligrams per kilogram (mg/kg) (DTSC, 2008).

Arsenic concentrations did not exceed the arsenic TTLC of 500 mg/kg, 10 times the arsenic STLC value of 5 milligrams per liter (mg/L) (50 mg/kg), or 20 times the arsenic TCLP threshold of 5 mg/L (100 mg/kg). Therefore, arsenic concentrations at the Site do not exceed thresholds that would classify soils as Federal or California hazardous wastes.

Based on the soil analytical results, Kleinfelder does not recommend any further assessment.

DRAFT

# 9 EVALUATION

Kleinfelder performed this Phase I ESA of the Site in conformance with the scope and limitations of the Standard Practice, the scope of services in our Proposal No. MPCOSTCO.001C/IRV18P76351, dated April 6, 2018, and in accordance with Costco Wholesale Development Requirements, Version 2014, Revised June 13, 2014. The following sections describe Kleinfelder's findings and provide general background information about the Site. Findings address RECs, HRECs, CRECs, and notation of *de minimis* quantities, as applicable to the Site. In summary, Kleinfelder's assessment revealed the following information concerning the Site:

## 9.1 BACKGROUND

- The Site comprises a 103-acre parcel of land identified by the San Joaquin County Assessor as APN 209-230-020-000. Currently, the Site is used for agricultural purposes.

- The Site was historically used for agricultural purposes (both agricultural fields and orchards) since at least 1937 through the present. Kleinfelder performed soil sampling throughout the Site to assess for the presence of pesticides and arsenic in shallow soil at the Site as a result of historical and current agricultural activities. Based on the analytical laboratory results, pesticides were not detected in shallow soil, and arsenic was detected at concentrations consistent with naturally-occurring background. Thus, the former agricultural use is not considered an environmental concern.

## 9.2 FINDINGS AND OPINIONS

The following is a summary of the findings and opinions of this Phase I ESA:

- A retention basin is located in the northeastern corner of the Site. A corrugated metal pipe culvert is present at the base of the retention basin. Irrigation-related standpipes were noted in the southeastern Site corner. These stand pipes appear to be gate valves for Site irrigation. Irrigation-related pipes were also noted along the southwestern Site border.

- Crimson Pipeline, L.P. operates a crude oil pipeline, and Pacific, Gas and Electric (PG&E) operates two natural gas pipelines, which run generally southeast-northwest across the northeastern portion of the Site (see Figure 2). No incidental/accidental releases were reported

Copyright 2018 Kleinfelder

along the pipelines in the vicinity of the Site. However, the presence of the pipelines on Site, along with the potential for undocumented leaks which may have occurred, represent a REC.

- Discarded oil and paint thinner containers, and an empty discarded propane tank, were noted in a concrete box culvert near the southwestern border of the Site, near the Delta Mendota Canal. Debris and general household trash was noted along the northern and southern borders of the Site, and in the southeastern corner of the Site. No evidence of stained soil was noted in the vicinity of the discarded items or debris/trash.

- No off-Site facilities are considered likely to have affected soil, soil vapor or groundwater beneath the Site.

## 9.3 DEVIATIONS AND ADDITIONAL SERVICES

Kleinfelder's scope of services did not include Standard Practice non-scope evaluations of cultural, historic, and archaeological resources and environmental regulatory compliance that may be required for a Phase I ESA pursuant to Costco's Development Requirements publication (revised June 13, 2014). In addition, the Phase I ESA did not include an assessment for ACMs, radon, LBP, lead in drinking water, molds and mildews, indoor air quality, industrial hygiene, health and safety, and other Standard Practice non-scope considerations not described herein.

Kleinfelder's scope of services included evaluations of wetlands and threatened, endangered, and other protected species pursuant to Development Requirements, Version 2014, revised June 13, 2014. Kleinfelder contracted with Moore Biological Consultants to perform these evaluations. However, the completed report summarizing the results of these evaluations has not yet been received. Results will be presented under separate cover.

## 9.4 CONCLUSIONS

Kleinfelder has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-13 of the property located at 16000 West Schulte Road in Tracy, California. Any exceptions to, or deviations from, this practice are described in Section 8.3 of this report.

This assessment has revealed no evidence of CRECs associated with the Site. The following REC has been identified:

The presence of natural gas pipelines and the potential for undocumented leaks to have occurred from the crude oil pipeline, which runs through the northeastern portion of the Site represents a

Copyright 2018 Kleinfelder

REC. However, should subsurface contamination be detected in the future as a result of leaks from this pipeline, Crimson Pipeline, L.P. (or current operator at that time) would be responsible for cleanup.

## 9.5 RECOMMENDATIONS

Based on the results of the Phase I ESA findings, Kleinfelder does not recommend further assessment at this time.

## 9.6 DATA GAPS

Consistent with ASTM Standard Practice E 1527-13, data gaps are to be identified, which may affect the identification of hazardous substances or petroleum products for the evaluation of RECs at the Site. Data gaps identified must be evaluated to determine if they constitute a data failure. The following data gap was identified for the Site.

- Questionnaire has not been received from the Site owner.

Based on other information gathered as part of this Phase I ESA, this data gap is not considered a data failure.

## STATEMENT OF QUALIFICATIONS

We declare that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all-appropriate inquiries in conformance with the standards and practices set forth in CFR Part 312.

Anthony Wohletz
Environmental Professional

Margaret R. Carroll
Environmental Professional

Lizanne Simmons, PG
Senior Principal Geologist

The resumes of above-listed environmental professionals performing this Phase I ESA are on file at the Kleinfelder office and are available upon request.

# EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

# EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

**STANDARD ENVIRONMENTAL RECORDS**

***Federal RCRA generators list***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

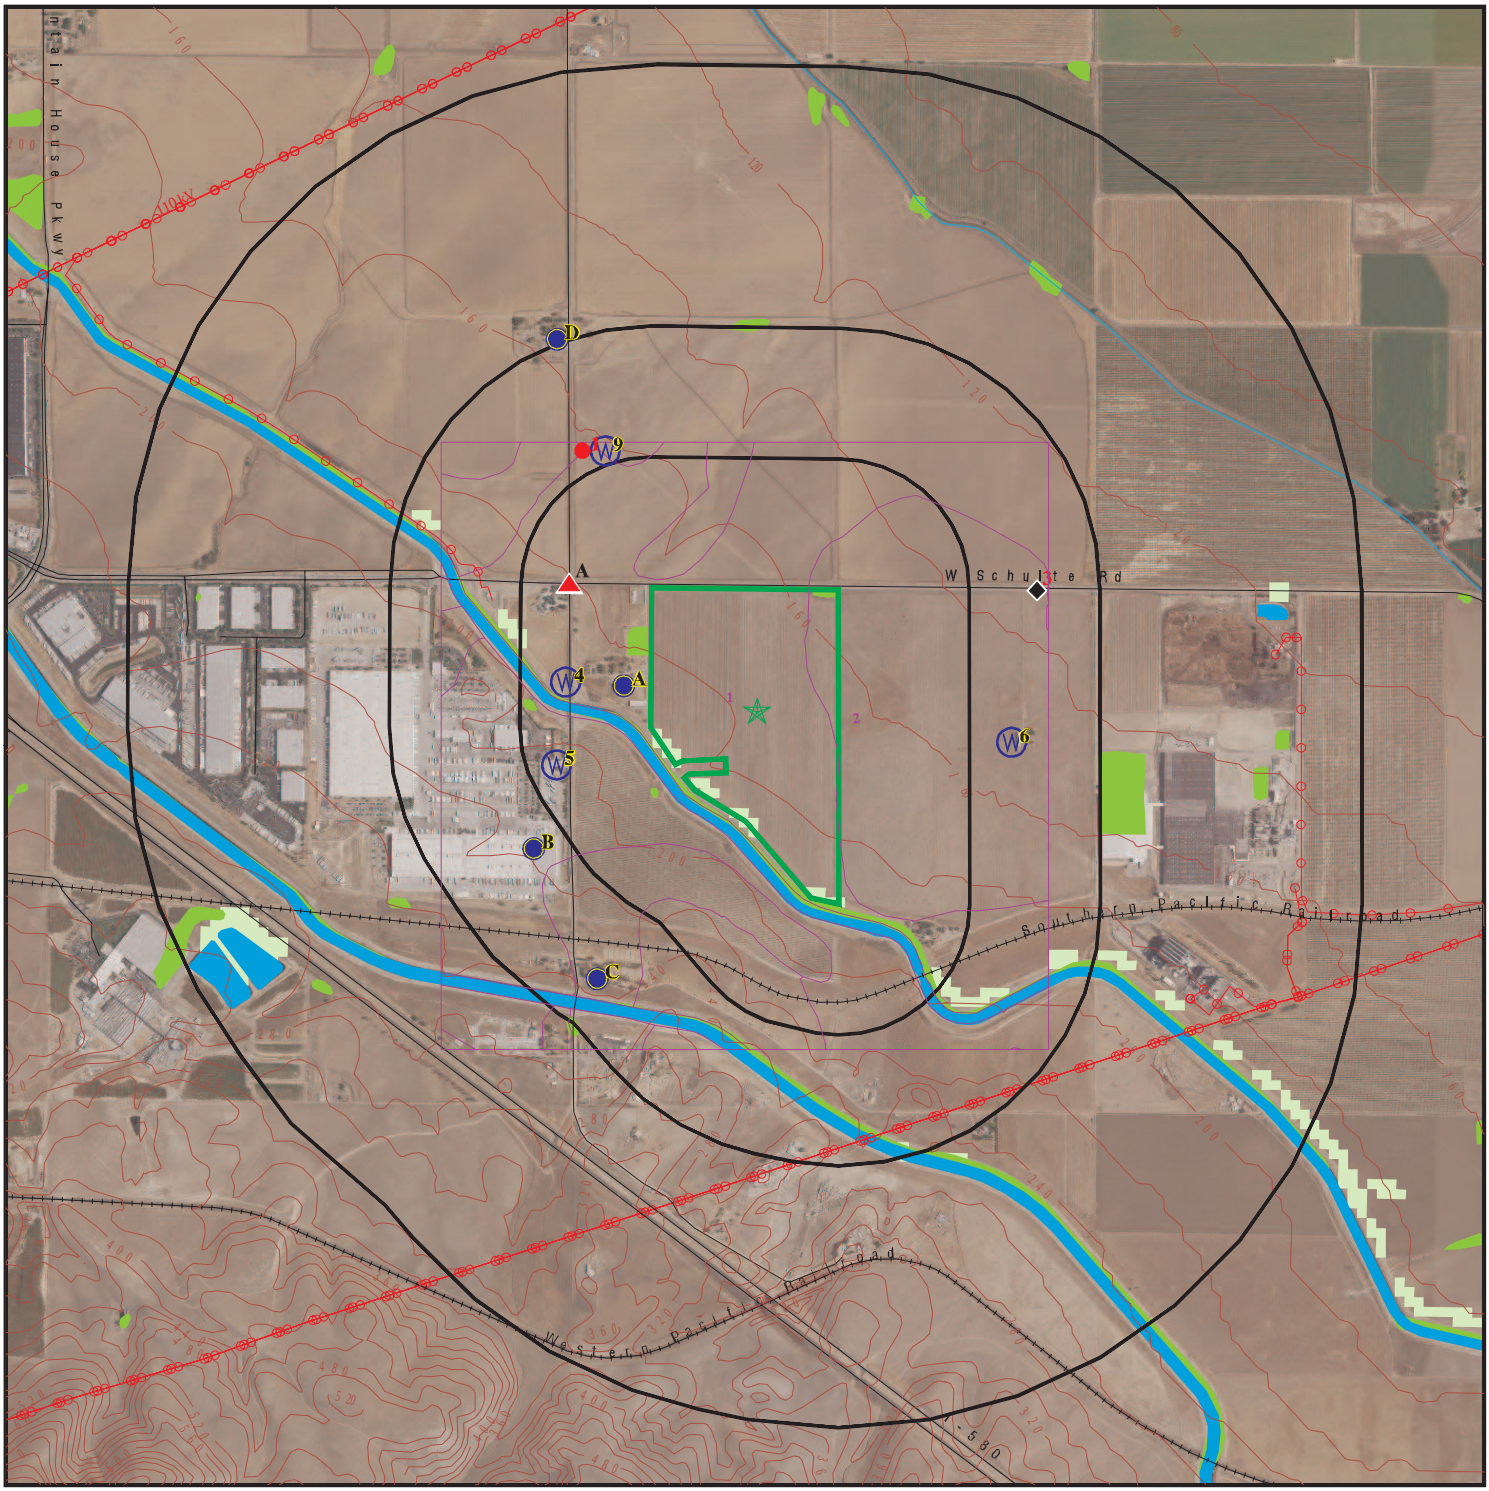
A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

| Equal/Higher Elevation | Address | Direction / Distance | Map ID | Page |
|---|---|---|---|---|
| SHELL PIPELINE CO LP | W SCHULTE AND HANSEN | NW 1/8 - 1/4 (0.158 mi.) | A2 | 8 |

***State and tribal leaking storage tank lists***

SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the SLIC list, as provided by EDR, has revealed that there are 2 SLIC sites within approximately 0.5 miles of the target property.



| Equal/Higher Elevation | Address | Direction / Distance | Map ID | Page |
|---|---|---|---|---|
| SHELL OIL COMPANY - | HANSEN & SHULTE RD | NW 1/8 - 1/4 (0.158 mi.) | A1 | 8 |

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

**STANDARD ENVIRONMENTAL RECORDS**

***Federal NPL site list***

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017

***Federal CERCLIS list***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016
Date Data Arrived at EDR: 01/05/2017
Date Made Active in Reports: 04/07/2017
Number of Days to Update: 92

Next Scheduled EDR Contact: 07/16/2018
Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 12/11/2017

Data Release Frequency: Quarterly

***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/11/2017
Date Data Arrived at EDR: 12/26/2017

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

**ADDITIONAL ENVIRONMENTAL RECORDS**

***Local Brownfield lists***

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 01/19/2018

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Data Release Frequency: Varies

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Hazardous Materials Management Division Database

The database includes: HE58 - This report contains the business name, site address, business phone number, establishment 'H' permit number, type of permit, and the business status. HE17 - In addition to providing the same information provided in the HE58 listing, HE17 provides inspection dates, violations received by the establishment, hazardous waste generated, the quantity, method of storage, treatment/disposal of waste and the hauler, and information on underground storage tanks. Unauthorized Release List - Includes a summary of environmental contamination cases in San Diego County (underground tank cases, non-tank cases, groundwater contamination, and soil contamination are included.)

**OTHER DATABASE(S)**

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

| Version Date: | 2012 |

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

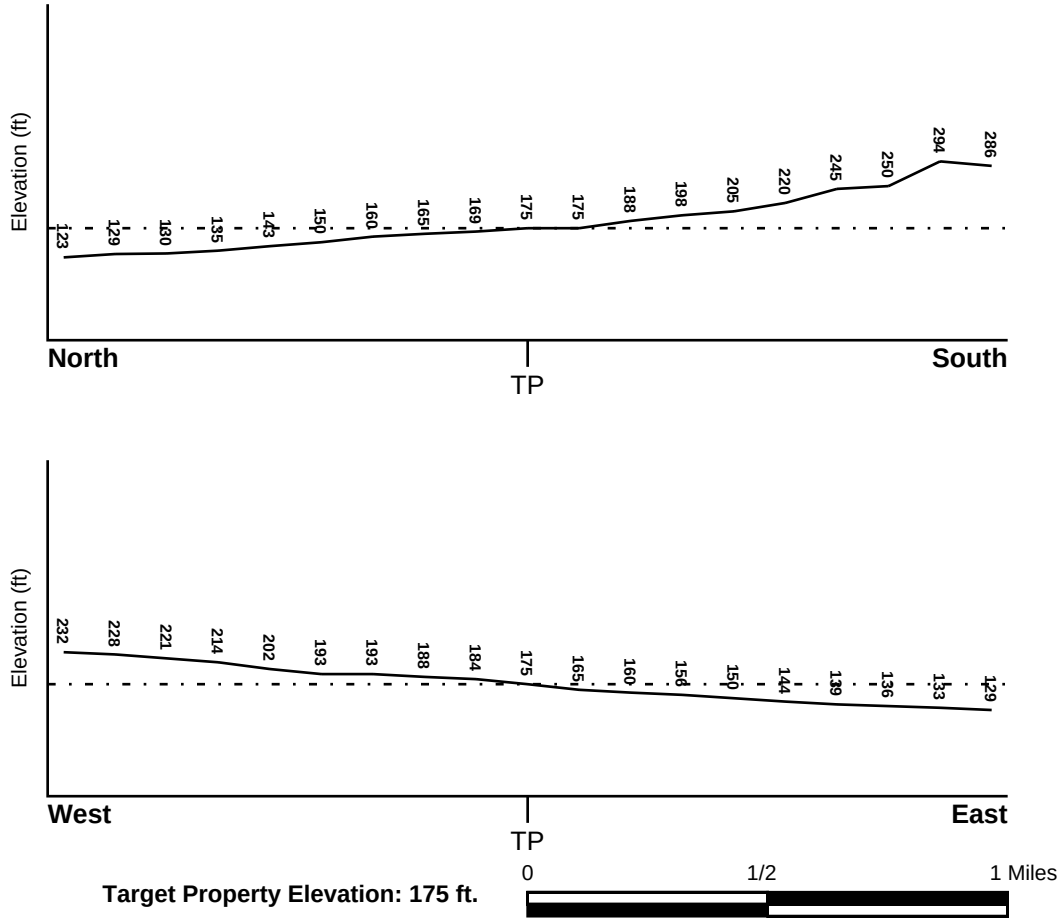
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



**TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**TARGET PROPERTY TOPOGRAPHY**

General Topographic Gradient: General NE

**SURROUNDING TOPOGRAPHY: ELEVATION PROFILES**

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**HYDROLOGIC INFORMATION**

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

**HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

***Site-Specific Hydrogeological Data*:***

**AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

**GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

**DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY**

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

---

**Soil Map ID: 1**

Soil Component Name: Capay

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

| Soil Layer Information | | | | | | | |
|---|---|---|---|---|---|---|---|
| | Boundary | | | Classification | | Saturated hydraulic conductivity micro m/sec | Soil Reaction (pH) |
| Layer | Upper | Lower | Soil Texture Class | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 20 inches | clay | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay. | Max: 1.4<br>Min: 0.42 | Max: 8.4<br>Min: 6.6 |
| 2 | 20 inches | 59 inches | clay | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay. | Max: 1.4<br>Min: 0.42 | Max: 8.4<br>Min: 6.6 |

---

**Soil Map ID: 2**

Soil Component Name: STOMAR

Soil Surface Texture: clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

## TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

## HYDROGEOLOGIC INFORMATION

AQUIFLOW$^{R}$ Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

## OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

# EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

TRACY - [illegible] PROPERTY PMK 4/11/18

## INTRODUCTION

In order to qualify for one of the *Landowner Liability Protections (LLPs)*[1] offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"),[2] the *user* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The *user* should provide the following information to the *environmental professional*. Failure to conduct these inquiries could result in a determination that "*all appropriate inquiries*" is not complete.

### (1.) Environmental liens that are filed or recorded against the *property* (40 CFR 312.25).

Did a search of *recorded land title records* (or judicial records where appropriate, see *Note 1* below) identify any environmental liens filed or recorded against the *property* under federal, tribal, state or local law? YES

*Note 1—In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.*

### (2.) Activity and use limitations that are in place on the *property* or that have been filed or recorded against the *property* (40 CFR 312.26(a)(1)(v) and vi)).

Did a search of *recorded land title records* (or judicial records where appropriate, see *Note 1* above) identify any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the *property* and/or have been filed or recorded against the *property* under federal, tribal, state or local law? NO

### (3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an *adjoining property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

NO

[1] *Landowner Liability Protections*, or *LLPs*, is the term used to describe the three types of potential defenses to Superfund liability in EPA's *Interim Guidance Regarding Criteria Landowners Must Meet in Order to Qualify for Bona Fide Prospective Purchaser, Contiguous Property Owner, or Innocent Landowner Limitations on CERCLA Liability* ("*Common Elements*" Guide) issued on March 6, 2003.
[2] P.L. 107-118.

**(4.) Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).**

Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

YES, YES

**(5.) Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).**

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? NO

*For example,*

(a.) Do you know the past uses of the *property*? Agricultural ?

(b.) Do you know of specific chemicals that are present or once were present at the *property*? NO

(c.) Do you know of spills or other chemical releases that have taken place at the *property*? NO

(d.) Do you know of any environmental cleanups that have taken place at the *property*? NO

**(6.) The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).**

Based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of releases at the *property*? NO

**In addition, certain information should be collected, if available, and provided to the *environmental professional* conducting the *Phase I Environmental Site Assessment.* This information is intended to assist the *environmental professional*, but is not necessarily required to qualify for one of the *LLPs*. The information includes:**

*(a)* the reason why the Phase I is being performed,

*(b)* the type of *property* and type of *property* transaction, for example, sale, purchase, exchange, etc.,

*(c)* the complete and correct address for the *property* (a map or other documentation showing *property* location and boundaries is helpful),

*(d)* the scope of services desired for the Phase I ESA (including whether any parties to the *property* transaction may have a required standard scope of services or whether any considerations beyond the requirements of Practice E1527 are to be considered),

*(e)* identification of all parties who will rely on the Phase I *report* ,

*(f)* identification of the site contact and how the contact can be reached,

*(g)* any special terms and conditions which must be agreed upon by the *environmental professional*, and

*(h)* any other knowledge or experience with the *property* that may be pertinent to the *environmental professional* (for example, copies of any available prior *environmental site assessment reports*, documents, correspondence, etc., concerning the *property* and its environmental condition).

# EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

***Thank you for your business.***

Subject: Data from San Joaquin County EHD Request Form.pdf

Good afternoon,

See attached for a records review request for the property located at:

16000 West Schulte Road
Tracy, California
(APN: 209-230-020-000)

Please contact me at the earliest available time if records exist. If possible, I would like to pay for records and have them emailed? Let me know if this can be arranged.

Thank you.

Sincerely,

Margaret R. Carroll
Senior Professional
707 Wilshire Boulevard, Suite 1450
Los Angeles, CA 90017
o| 213.622.3706
d| 213.596.6178
c| 562.458.0531

The attached file contains data that was entered into a form.

The recipient of this data file should save it locally with a unique name. Bluebeam Revu x64 can process this data by importing it back into the blank form.

SAN JOAQUIN COUNTY
Greatness grows here.

PUBLIC RECORDS RELEASE APPLICATION

SUBMIT BY EMAIL

**EHD LOG NUMBER:**

**APPLICANT:** Margaret Carroll **BUSINESS/AGENCY:** Kleinfelder

**ADDRESS:** 707 Wilshire Boulevard, Suite 1450 **CITY/STATE/ZIP:** Los Angeles, CA 90017

**PHONE (1):** 213-598-6178 **PHONE (2):** _____ **FAX OR E-MAIL:** mcarroll@kleinfelder.com

Please allow 10 business days from date of application submittal for the records to be available.
Staff will contact you to arrange an appointment date and time to review the requested records.

**SIGNATURE OF APPLICANT** _____ **DATE** April 16, 2018

1. **List up to ten addresses in the space below. Address ranges WILL NOT be accepted. Select the type(s) of files from the list below by checking the appropriate box(es). At least one file type MUST be selected. Fax to (209) 464-0138, mail to the address indicated below, or email to info@sjcehd.com. Applications received after 3:00 pm will be processed the next business day.**
2. **For assistance in identifying the nature and content of EHD records, please contact EHD at the number noted below.**
3. **The EHD will notify the applicant if any EHD files exist. An appointment for review will be confirmed approximately ten (10) days after receipt of application. The files will be held for a maximum of five business days for review. Appointments should be scheduled accordingly.**
4. **Any file not returned in the same condition as released will be reorganized by EHD staff at the expense of the applicant. Future file reviews by the same applicant may require a $152 deposit prior to review.**

WELL AND SEPTIC PERMIT RECORDS ARE AVAILABLE FOR REVIEW: MONDAY-FRIDAY 8:00 AM-5:00PM (EXCLUDING HOLIDAYS)

# EDR BUILDING PERMIT REPORT

## About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

## ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

## Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

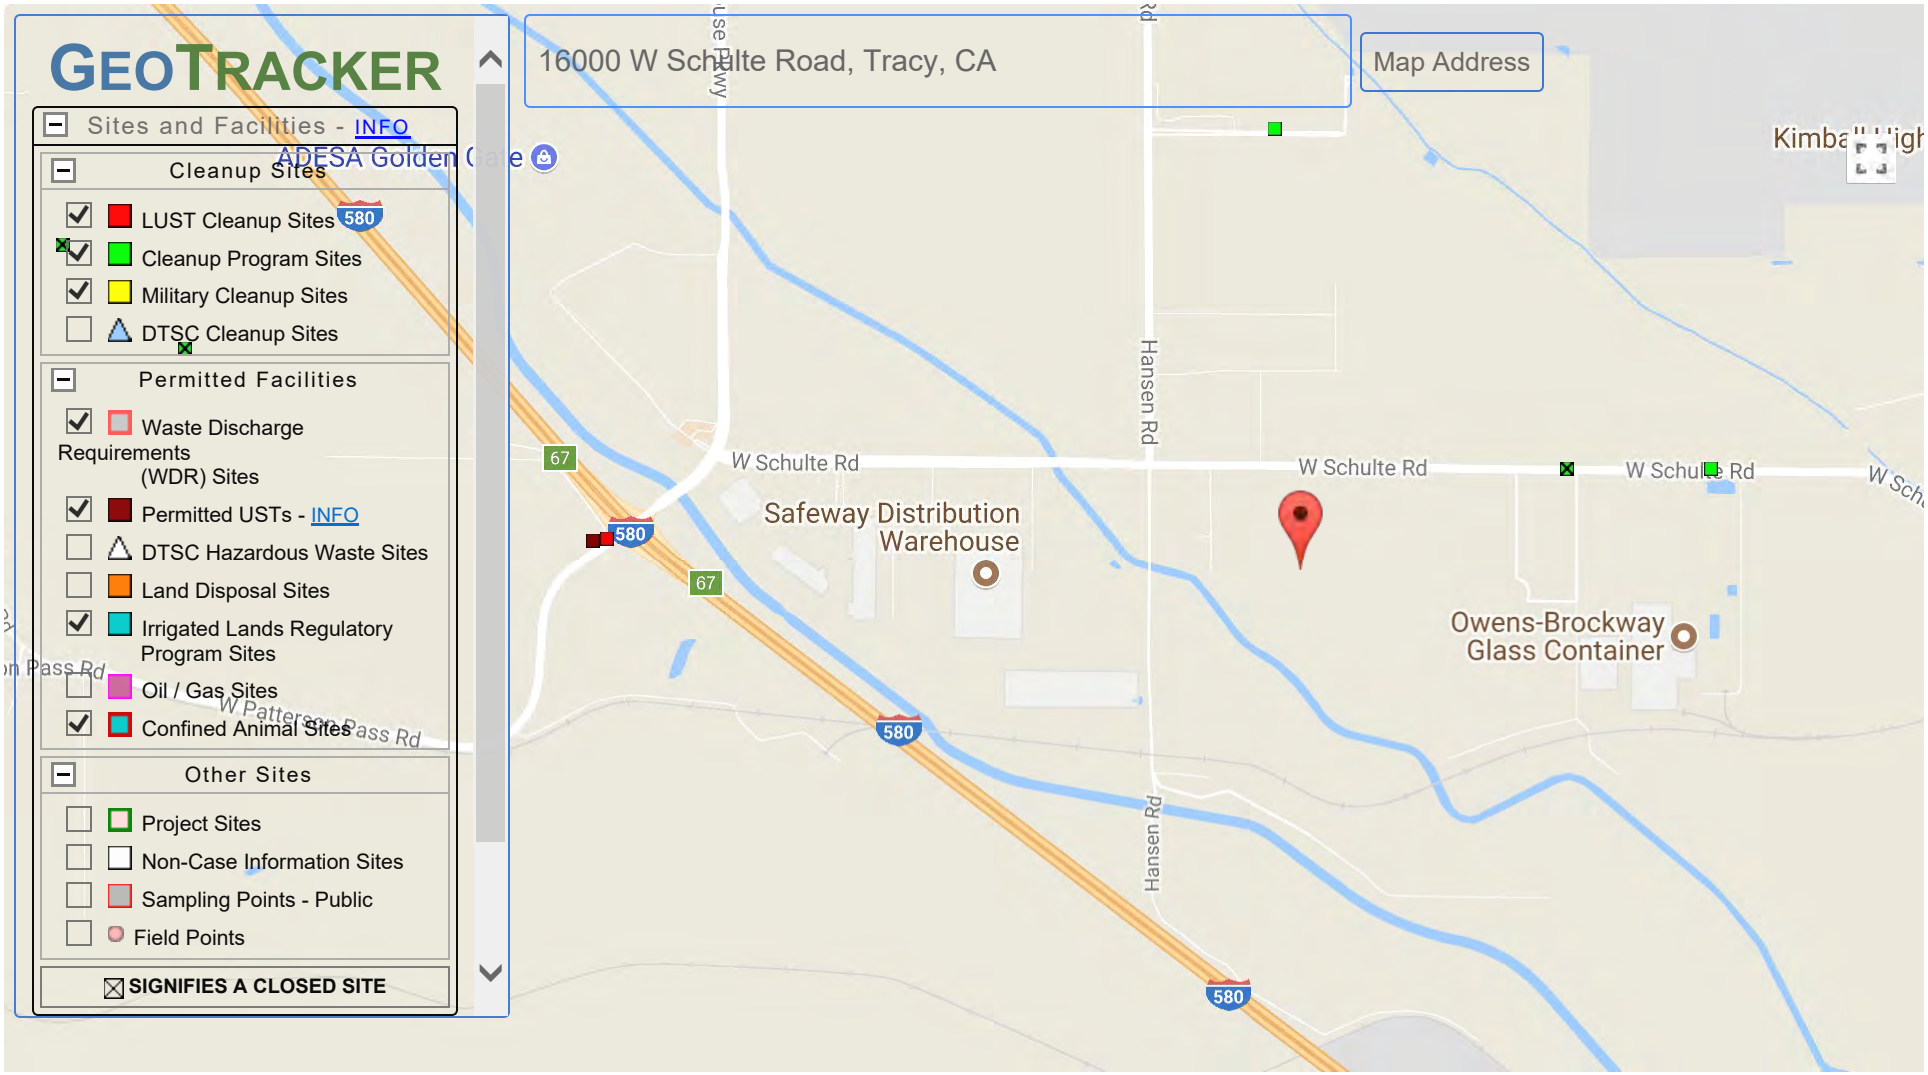
# GLOSSARY

**General Building Department concepts**

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

# GLOSSARY

**Permit Content Definitions**



- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

**Sample Building Permit Data**

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

**Central Valley Regional Water Quality Control Board**

**TO:** Case File
Joseph Mello, CHG 545

**FROM:** Kristi Shelton, P.E.
Water Resources Control Engineer
**SITE CLEANUP SECTION**

**DATE:** 24 July 2013

**SUBJECT:** ***NO FURTHER ACTION REQUIRED, TRACY YOUTH SPORTS PARK, 15178 SCHULTE ROAD, TRACY, SAN JOAQUIN COUNTY***

Central Valley Water Board staff reviewed the case file for the Tracy Youth Sports Park facility at 15178 Schulte Road in Tracy (Site). The Site is listed in GeoTracker as Global ID SL0607797298. There are no files at the Central Valley Water Board associated with this case. In addition, the San Joaquin County Environmental Health Department does not have any information on the Site. The information on the Site was obtained during an internet search of the address.

In June 2006, the City of Tracy (City) conducted an Environmental Impact Report (EIR) to evaluate the potential environmental impacts from the development of a youth sports park at the Site. The City proposed constructing four football fields, 23 baseball/softball fields, 15 soccer fields, a sports/football stadium, and a recreation area at the 200 acre Site. The EIR identified environmental impacts associated with increased traffic and regional air quality impacts from the construction of the project. In addition, the EIR noted there are two Pacific Gas & Electric (PG&E) transmission pipelines and one Chevron crude oil pipeline beneath the Site. There is no record of any soil and/or groundwater data collected during the assessment.

In December 2007, the City voted to reject all construction bids on the proposed project and decided not to pursue construction of a sports park at the Site. City Council members cited the concern over safety of placing the youth sports park above existing pipelines as the reason to cancel the project. The council went on to say that the industrial nature of the area and the potential for industrial accidents made the Site a poor choice for youth sports.

The Site was opened in GeoTracker on 1 September 2007 presumably following receipt of the EIR. Board staff will not be activating the case and consider it closed.

| REMEDIAL ACTION | BEGIN DATE | END DATE | DESCRIPTION |
|---|---|---|---|
| Excavation | 5/24/2001 | 8/1/2001 | In 2001, Shell removed a 3,000-foot section of 8-inch crude oil pipeline from 4 feet bgs, from the Cordes Ranch property in anticipation of development. During the removal, six areas referred to as Trenches 1 through 6 were observed to be impacted by petroleum hydrocarbons. Shell over excavated two trenches to depths ranging from 6 to 20 feet bgs and excavated to 4 feet at 4 additional trenches. Groundwater is 30 to 35 feet bgs. Subsequent investigations established the presence of residual hydrocarbons in soil and in deep groundwater. Our 5 November 2009 letter concurred with Shell's 15 October 2009 Monitoring Well Installation Work Plan (Work Plan) to install nine monitoring wells in the vicinity of Trench 2, Trench 3, and boring B-69. The RA Work |

Plan proposes to collect soil and groundwater data from the borings for the proposed wells. The proposed wells include two deep wells which are identified as a sentinel well about 500 feet northwest of Trench 1 and the Trench 3 well located about 20 feet southwest of Trench 3. However, Shell is claiming that TPHc observed below 171 feet bgs is naturally occurring.

## X. GENERAL COMMENTS

In 2001, Shell removed a 3,000-foot section of 8-inch crude oil pipeline from 4 feet bgs, from the Cordes Ranch property in anticipation of development. During the removal, six areas referred to as Trenches 1 through 6 were observed to be impacted by petroleum hydrocarbons. Our 5 November 2009 letter concurred with Shell's 15 October 2009 Monitoring Well Installation Work Plan to install nine monitoring wells in the vicinity of Trench 2, Trench 3, and boring B-69. The RA Work Plan proposes to collect soil and groundwater data from the borings for the proposed wells. The proposed wells include two deep wells which are identified as a sentinel well about 500 feet northwest of Trench 1 and the Trench 3 well located about 20 feet southwest of Trench 3. However, Shell is claiming that TPHc observed below 171 feet bgs is naturally occurring.

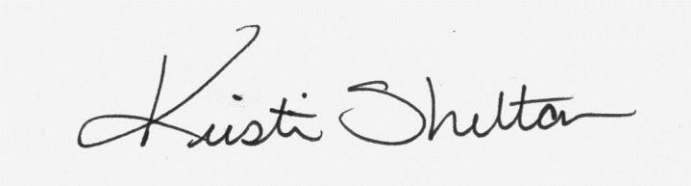
Carson, CA 90810

***GROUNDWATER MONITORING REPORT THIRD QUARTER 2017, FORMER SHELL OIL PIPELINES, CORDES RANCH, HANSEN ROAD, SAN JOAQUIN COUNTY***

Central Valley Regional Water Quality Control Board (Central Valley Water Board) staff reviewed the 6 October 2017 *Groundwater Monitoring Report Third Quarter 2017* (QMR) submitted by GHD Services, Inc. on behalf of Equilon Enterprises LLC dba Shell Oil Products US (Shell) for the Former Shell Central Valley Crude Oil Pipelines on Hansen Road in the Cordes Ranch pipeline area (Site). Shell operated two crude oil pipelines at the Site until they removed the pipelines in the 1960s. One section of pipeline remains under Hansen Road. FedEx Tracy Hub and Medline warehouse facilities now occupy the Site. Central Valley Water Board staff previously approved an *Amended Soil Management and Excavation Work Plan (Work Plan)* dated 11 September 2014, which describes procedures for managing soil impacted with total petroleum hydrocarbons as crude (TPHc) from former pipelines during the redevelopment project at Cordes Ranch in Tracy.

The QMR summarizes the July/August groundwater monitoring and sampling event. Depth to water ranged from about 35 feet below ground surface (bgs) to about 52 feet bgs. Total petroleum hydrocarbons as crude oil (TPHc) was detected in one monitoring well (MW-16) at a concentration of 400 micrograms per liter (µg/L). Other petroleum hydrocarbons were not detected above laboratory detection limits in any other monitoring wells.

Our comments are:



1. Central Valley Water Board staff concurs with the request to discontinue sampling of Site monitoring wells. Shell sampled monitoring wells MW-17 and MW-24 for one hydrologic cycle; these wells have contained sporadic detections of TPHc (maximum of 830 µg/L). MW-16 has contained a maximum concentration of 400 µg/L. Shell may stop monitoring Site groundwater wells.

2. Shell needs to continue to monitor and collect water samples annually from the nearby domestic wells.

3. Central Valley Water Board staff concurs the Site may be eligible for closure. Shell should prepare a closure report that includes a summary of the Site history, remaining mass of contamination, mass removed, remaining risks to human health and the environment, and an evaluation with respect to the California State Water Resources Control Board's Low Threat Closure Policy (LTCP). The closure request needs to be signed and stamped by a

registered professional and should include the LTCP checklist. If Shell identifies any data gaps during the closure evaluation, you should include a work plan that proposes methods to close the data gaps with the closure request.

In summary, Shell may discontinue sampling Site groundwater monitoring wells and prepare a closure request. Shell should continue to collect samples annually from nearby residential domestic wells. If you have questions please contact me by phone at (916) 464-4819 or by email at kristin.shelton@waterboards.ca.gov.

# 1. Introduction

GHD Services Inc (GHD; formerly Conestoga-Rovers & Associates [CRA]) is submitting this *Site Investigation and Third and Fourth Quarter 2016 Groundwater Monitoring Report* on behalf of Equilon Enterprises LLC dba Shell Oil Products US (Shell) to document the recent assessment conducted on the Former Shell Central Valley Crude Oil Pipelines located at Cordes Ranch in Tracy, California (Figure 1). GHD followed the scope of work presented in our August 31, 2016 *Site Investigation Work Plan*, which was conditionally approved in Central Valley – Regional Water Quality Control Board's (CV-RWQCB's) September 8, 2016 letter. The CV-RWQCB work plan approval letter is provided as Appendix A. The investigation consisted of installing groundwater monitoring wells on and around the new FedEx and Medline warehouses to replace wells which were destroyed prior to redevelopment.

## 1.1. Site Background

The site is located near the eastern slope of the Altamont Pass in the City of Tracy, California. The Former Shell Central Valley Crude Oil Pipelines carried crude oil from the Central Valley to the Bay Area. Shell operated two pipelines (8-inch and 10-inch diameter) that traverse the site, oriented in a northwest-to-southeast direction through agricultural land. The pipelines were reportedly removed from operation in the late 1960's. The current site boundaries encompass approximately 2 miles of former crude oil pipeline right-of-way located south of Highway 205 northwest of Hansen Road and north of Schulte Road (Figure 1). Based on available information, the pipelines were removed within the site boundaries except for a section that remains under Hansen Road. The former pipeline locations are shown on Figure 2. Based on historical records, these pipelines carried crude oil from the Central Valley to the Bay Area; they did not carry refined product. The pipelines were idled in the late 1960s and early 1970s and, along the length of the pipeline, certain portions were reportedly removed while others were abandoned in place. An existing Chevron-Texaco pipeline is located west of the investigation area.

The project area is now occupied by new FedEx Ground Tracy Hub and Medline warehouse facilities. There is an approved development plan and agreement between the property owner and the City of Tracy for development of the remainder of the Cordes Ranch property.

## 1.2. Previous Work Activities

***2001 Pipeline Removal:*** In 2001, Shell removed the pipelines in the Cordes Rach area, with the exception of a short section under Hansen Road and on the residential property at 24322 Hansen Road. During the removal, impacted soils were observed in six areas along the pipeline. Two of the areas were over-excavate to between 15 and 20 feet below grade (fbg) and the other four areas were over-excavated to 4 fbg, corresponding with the approximate depth of the former pipelines.

***2002 Subsurface Investigations:*** In January and February 2002, Clayton Group Services (Clayton) drilled 41 soil borings (B-1 through B-40 and B-42) along the pipeline alignment to generally define the extent of hydrocarbons in soil and groundwater. Soil samples collected from the borings contained up to 31,780 milligrams per kilogram (mg/kg) total petroleum hydrocarbons as

crude oil (TPHc) and 3.7 mg/kg benzene. Grab groundwater samples collected from the borings contained up 523,100 micrograms per liter (μg/L) TPHc and 670 μg/L benzene. Clayton's June 26, 2002 *Investigation Report* details this investigation.

In October 2002, Clayton drilled 14 additional soil borings (B-43 through B-56) to further delineate lateral extent of hydrocarbons in soil and groundwater. Soil samples collected from the borings contained up to 22 mg/kg TPHc. No benzene was detected in the soil samples. No TPHc or benzene was detected in grab groundwater samples collected from the borings. Clayton's December 26, 2002 *Investigation Report* presents investigation details.

***2003 Subsurface Investigations:*** In March 2003, Clayton drilled four soil borings (B-57 through B-60) to further define the vertical extent of soil and groundwater impacts. Soil samples collected from the borings contained up to 16,000 mg/kg TPHc and 150 mg/kg benzene. Grab groundwater samples collected from the borings contained up 16,000 μg/L TPHc and 150 μg/L benzene. Clayton's May 5, 2003 *Investigation Report* provides investigation results.

In June 2003, Clayton drilled three soil borings (B-61 through B-63) to further define the vertical extent of groundwater impacts. Grab groundwater samples collected from the borings contained up 2,400 μg/L TPHc and 15 μg/L benzene. Clayton's July 22, 2003 *Additional Delineation Report* details investigation results.

In September 2003, Clayton drilled two additional soil borings (B-64 and B-65) to further define the vertical extent of groundwater impacts. Grab groundwater samples collected from the borings contained up 2,600 μg/L TPHc and 1.2 μg/L benzene. Clayton's December 2, 2003 *Additional Groundwater Delineation Report* provides investigation details.

***2004 Subsurface Investigation:*** In February and March 2004, Clayton drilled of 2 additional soil borings (B-66 and B-67) to further define the vertical extent of groundwater impacts. No TPHc or benzene was detected in the soil sample collected from 237.5 fbg in boring B-67. Grab groundwater samples collected from the borings contained up 74,000 μg/L TPHc. No benzene was detected in the grab groundwater samples. Clayton's April 26, 2004 *Additional Groundwater Delineation Report* presents investigation results.

***2005 Forensic Analysis:*** Clayton's April 22, 2005 *Status Report* documents a forensic hydrocarbon analysis performed by Shell. Shell concluded that TPHc detected in the grab groundwater sample from boring B-66 at 171.5 feet is most likely the result of a naturally occurring erosional deposit or an oil seep not related to the pipeline.

Clayton's September 28, 2005 *Status Report* provides additional discussion on Shell's forensic analysis and concludes the hydrocarbons detected at 171.5 feet are not related to the pipeline and appear to be naturally occurring. Shell's analysis further suggests that that shallow hydrocarbons attenuate at depths of approximately 40 feet and that the hydrocarbons detected below approximately 50 feet are different in nature than the shallower hydrocarbons.

***2005 Subsurface Investigation:*** In June 2005, Clayton drilled two soil borings (B-68 and B-69) to further assess the extent of soil and groundwater impacts. Soil samples collected from the borings contained up to 11,000 mg/kg TPHc and 0.87 mg/kg benzene. Grab groundwater samples

contained up to 730,000 μg/L TPHc and 180 μg/L benzene. Clayton's September 28, 2005 *Status Report* presents investigation details.

***2007 Subsurface Investigation:*** In April 2007, Science Applications Incorporated (SAIC) drilled four borings (B-70, B-71, B-72 and B-74) to assess soil vapor conditions and two borings (B-75 and B-76) to further evaluate the lateral extent of hydrocarbon groundwater impacts in the interval between 40 and 150 fbg. Soil vapor samples collected from the borings contained up to 390,000 micrograms per cubic meter ($\mu g/m^3$) benzene. Grab groundwater samples contained up to 14,000 μg/L TPHc. No benzene was detected in the grab groundwater samples. SAIC's August 6, 2007 *Site Investigation Report* details this investigation.

***2009 Subsurface Investigation:*** In October 2008, Conestoga-Rovers & Associates (CRA) drilled two borings (B-77 and B-78) to further define the horizontal extent of groundwater impacts northeast of B-75. Grab groundwater samples contained up to 2,500 mg/kg TPHc. No benzene was detected in the grab groundwater samples. CRA's January 8, 2009 *Site Investigation Report* presents investigation and survey findings.

***2009 Site Conceptual Model (SCM):*** CRA's September 1, 2009 SCM describes the relationship between the source area, transport pathways, and potential receptors. CRA developed the SCM based on review of available geological and analytical data.

***2010 to 2016 Residential Well Monitoring:*** In June 2010, CRA sampled five domestic water wells located northwest of the site to determine if petroleum hydrocarbons are present in the wells. No petroleum hydrocarbons were detected in the samples collected from the domestic water wells. The two wells closest to the former pipelines have been sampled annually since the initial event. No petroleum hydrocarbons were detected in the wells CRA's annual **r**esidential well monitoring reports detail sampling results.

***2010 Subsurface Investigation:*** From July to September 2010, CRA installed thirteen groundwater monitoring wells (MW-1 through MW-4, MW-5A, MW-5B, MW-5C, and MW-6 through MW-11) to assess groundwater quality, gradient, and flow direction in the vicinity of the former crude oil pipeline. The wells monitored three groundwater zones; 30 to 50 fbg (Zone A), 105 to 125 fbg (Zone B), and 160 to 177 fbg (Zone C). Soil samples collected from the well borings contained up to 79,000 mg/kg TPHc and 7.4 mg/kg benzene. CRA's October 15, 2010 *Site Investigation Report* presents well installation details.

***2011 Subsurface Investigations:*** From May to July 2011, CRA drilled twenty soil borings (B-79, B-79A, B-80 through B-92, B-93, B-93A, B-93B, B-94, and B-95) to assess soil conditions beneath areas 7, 8, and 9; installed six groundwater monitoring wells (MW-12, MW-13B, MW-13C, MW-14B, MW-14C, and MW-15 were installed to assess groundwater quality, gradient, and flow direction; and installed three nested soil vapor wells (VW-1, VW-2, and VW-3) to assess soil vapor impacts. Soil samples collected from the soil and well borings contained up to 68,000 mg/kg TPHc and 5.3 mg/kg benzene. Soil vapor samples contained a limited number of volatile organic compounds and semivolatile organic compounds at varying concentrations. CRA's January 4, 2012 *Subsurface Investigation and Third Quarter 2011 Groundwater Monitoring Report* details the investigation.

In November 2011, CRA drilled 29 exploratory borings (B-96 through B-104, B-104A, B-104B, B-105 through B-109, B-109A, B-110 through B-113, B-113A, B-113B, B-114, B-115, B-115A,

B-115B, and B-116) along the pipeline alignment. Soil samples collected from the borings contained up to 57,000 mg/kg TPHc and 2.2 mg/kg benzene. CRA's May 13, 2013 *Subsurface Investigation Report and Updated Site Conceptual Model* provides investigation details. This report also presents a human health risk assessment (HHRA) and ecological risk assessment (ERA).

***2014 Subsurface Investigations and Well Destructions:*** In May 2014, ENGEO, Inc. (ENGEO) drilled 48 soil borings for a geotechnical investigation prior to site redevelopment. CRA collected various soil samples from 14 borings (1-B05 through 1-B07, 1-B09, 1-B10, 1-B12, 1-B13, 1-B27 through 1-B29, and 1-B35 through 1-B38) located in the area of the former pipeline alignment at depths from 5 to 15 fbg. TPHc was detected in a single soil sample from boring 1-B07 at 15 fbg at a concentration of 28 mg/kg. Benzene was not detected in these soil samples.

In May and June 2014, CRA drilled three soil borings (B-117 through B-119) and installed one groundwater monitoring well (MW-16) to delineate soil and groundwater impacts in the area of well MW-15. Soil samples collected from the soil borings and well boring contained up to 42,000 mg/kg TPHc and 8.3 mg/kg benzene.

In July 2014, CRA properly destroyed all site wells and vapor probes, with the exception of well MW-16. CRA's September 30, 2014 *Subsurface Investigation and Well Destruction Report* presents details for both investigations and the well destructions.

***2014 and 2015 Soil Management Plans and Reports:***

- May 23, 2014: CRA, *Soil Management Plan and Excavation Work Plan*
- September 11, 2014: CRA, *Amended Soil Management Plan and Excavation Work Plan*
- December 5, 2014: CRA, *Amended Soil Management Plan*
- February 26, 2015: CRA, *Amended Soil Management Plan*
- October 19, 2015: GHD, *Soil Management Report FedEx Site*
- November 6, 2015: GHD, *Soil Management Report Medline Site*

***2014 Excavation:*** In September and October 2014, CRA excavated the areas around boring locations B-9 and B-93 to 5 fbg, dug and two exploratory trenches between former well MW-15 and boring location B-80, and dug a trench along the removed pipeline. CRA collected 49 confirmation soil samples from the excavations that contained up to 47,000 mg/kg TPHc. Benzene was not detected in the soil samples. GHD's April 15, 2015 *Remedial Action Report* provides excavation details.

***Groundwater Monitoring:*** 20 groundwater monitoring wells were installed and sampled periodically prior to site redevelopment. 19 of these wells were destroyed in 2014. Groundwater samples are analyzed for TPHc and benzene, toluene, ethylbenzene, and total xylenes (BTEX). The remaining well (MW-16) is currently sampled semiannually. The historical data indicate the following:

- Zone A – The average depth to groundwater was 34.5 fbg and the groundwater flow direction ranges from southwest to northeast at gradients ranging from 0.001 to 0.05. Dissolved phase

petroleum detections were limited well MW-2. Well MW-5A and well MW-15 contain minimal LNAPL. The remaining wells generally did not contain petroleum constituents.

- Zone B - The average depth to groundwater was 33.8 fbg and the groundwater flow direction is northwesterly at an approximately hydraulic gradient of 0.01.
- Zone C - The average depth to groundwater was 54.5 fbg and the groundwater flow direction is easterly at an approximately hydraulic gradient of 0.004. Dissolved phase petroleum detections were infrequent and no benzene was detected.
- TPHc detections in Zones B and C were infrequent and random, ranging from non-detect to 2,800 µg/L. Furthermore, the random detections of TPHc are relatively low concentration and are typically flagged by the laboratory as "hydrocarbon result partly due to individual peak(s) in quantitation range." Particularly random were the TPHc detections at well MW-14B, which was located over 320 feet laterally (northwest) from the pipeline, and cross-gradient to the groundwater flow direction. TPHc concentrations at this depth (125 fbg) and lateral distance (320 feet) from the pipeline is not consistent with the behavior of weathered crude oil particularly in the low permeability soils encountered at the Site.

# 2. Investigation Results

## 2.1. Permits

GHD obtained drilling permits for the wells from the San Joaquin County Environmental Health Department. Copies of the permits are presented in Appendix B.

## 2.2. Drilling Dates

October 10 through 14, 21 and 22, 2016.

## 2.3. Drilling Company

Cascade Drilling, L.P. of Sacramento, California

## 2.4. GHD Personnel

Geologist Jessica Hudnall directed the drilling activities under the supervision of California Professional Geologist Peter Schaefer.

## 2.5. Drilling Method

The soil borings were advanced using hollow stem augers.

## 2.6. Number of Borings

GHD drilled eight soil borings (MW-17 though MW-24), which were completed as groundwater monitoring wells. The well locations are shown on Figure 2 and 3. The borings and soil types encountered are described on the boring logs, presented in Appendix C.

## 2.7. Boring Depths

Soil borings were drilled to 45.5 to 65.5 fbg.

## 2.8. Soil Sampling

GHD collected soil samples at 5 foot intervals in the borings for soil description, screening in the field for organic vapors using a flame ionization detector (FID), and laboratory analyses. GHD shipped the soil samples to CalScience Environmental Laboratories, Inc. (CalScience) in Garden Grove, CA for analysis. The samples were analyzed for TPHc (C6–C44) with and without silica gel cleanup by EPA Method 8015B (M) and BTEX by EPA Method 8260B.

## 2.9. Soil Boring/Well Location Survey

Mid Coast Engineers (MCE) of Watsonville, California conducted a survey on October 31, 2016 to obtain latitude, longitude, and elevation data. MCE's survey report is included as Appendix D.

## 2.10. Monitoring Well Installation

Wells MW-17. MW-19 through MW-22 were completed to approximately 50 fbg and screened from 30 to 50 fbg. Well MW-18 was completed to approximately 45 fbg and screened from 25 to 45 fbg. Well MW-23 was completed to approximately 65 fbg and screened from 45 to 65 fbg. The wells were constructed using 2-inch-diameter Schedule 40 PVC casing. The filter pack was placed from the bottom of the well screen up to 2 ft above the top of the well screen, followed by a 2-foot-thick bentonite seal, and cement grout to grade. The wells are secured with a locking cap and a traffic-rated cristy box.

## 2.11. Well Development and Sampling

Blaine Tech Services, Inc. (Blaine) developed wells MW-17 through MW-24 on October 25 and 26, 2016 and collected initial groundwater samples from the wells on October 31, 2016. Blaine's field notes, presenting the well development and sampling data, are included in Appendix E.

## 2.12. Waste Disposal

Residual soil and equipment decontamination (decon) water from the well borings were stored on site in a 10-cubic-yard soil bin and 55-gallon drums. On October 14, 2016, the soil bin was transported by American Integrated Services, Inc. (AIS) of Wilmington, California to Keller Canyon Landfill in Pittsburg, California. On November 8, 2016, the soil drums were transported by AIS to Keller Canyon Landfill in Pittsburg, California and AIS transported the decon water drums to Crosby & Overton, Inc. in Long Beach, California for recycling. Appendix F presents the disposal manifests.

# 3. Findings

## 3.1. Soil

The soil chemical analytical data are summarized in Table 1. Figure 3 presents soil chemical concentration data for each soil boring. The laboratory analytical report is presented in Appendix G. GHD's independent data validation of the laboratory analytical results is provided as Appendix H.

BTEX was not detected in soil samples collected from the well borings. TPHc was not detected in the soil samples with the following exceptions:

- MW-18 at 5, 10, and 25 fbg contained 7,000, 600, and 45 mg/kg TPHc, respectively.
- MW-19 at 35 and 45 fbg contained 92, and 260 mg/kg TPHc, respectively.
- MW-21 at 15 fbg contained 58 mg/kg TPHc.

The chromatograms from the samples the detections in MW-18 and MW-21 did not match the chromatogram for the TPHc standard.

## 3.2. Groundwater

The groundwater data are presented in Table 2. The laboratory analytical report is presented in Appendix G. GHD's independent data validation of the laboratory analytical results is provided as Appendix H. A groundwater contour and chemical concentration map showing TPHc and benzene analytical results is presented on Figure 4. Note that groundwater analytical data for well MW-16 is from third quarter 2016 (July 29, 2016).

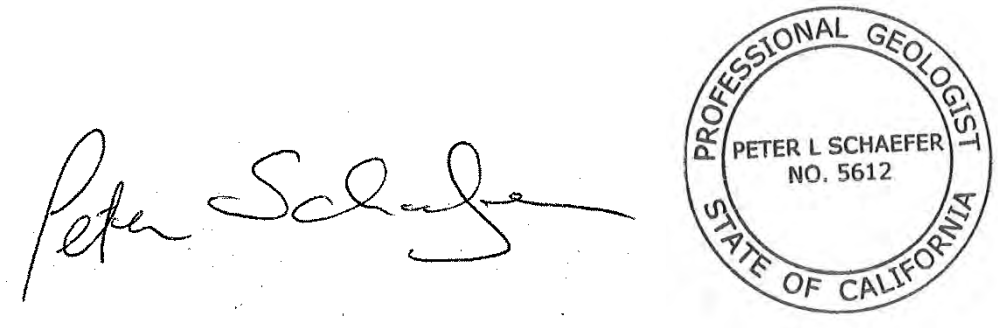
No TPHc or BTEX was detected in groundwater samples collected during the third and fourth quarter 2016 groundwater monitoring events.

The depth to groundwater ranged from 34.75 (MW-19) to 49.78 (MW-23) fbg. Groundwater elevation ranged from 81.82 (MW-20) to 82.56 (MW-23) feet above mean sea level.

# 4. Conclusions

Crude oil impacts to soil detected during this investigation are limited in extent. The highest concentrations (MW-18) are beneath the Medline parking lot and are below the on-site soil reuse concentrations approved by CV-RWQCB[1].

The groundwater analytical data demonstrate that the dissolved-phase TPHc in groundwater is now delineated down-gradient from the residual impacts along the pipeline alignment. Historically, BTEX in groundwater has not been detected or detected at low concentrations as a result of degradation over the years since the pipelines were taken out of service.

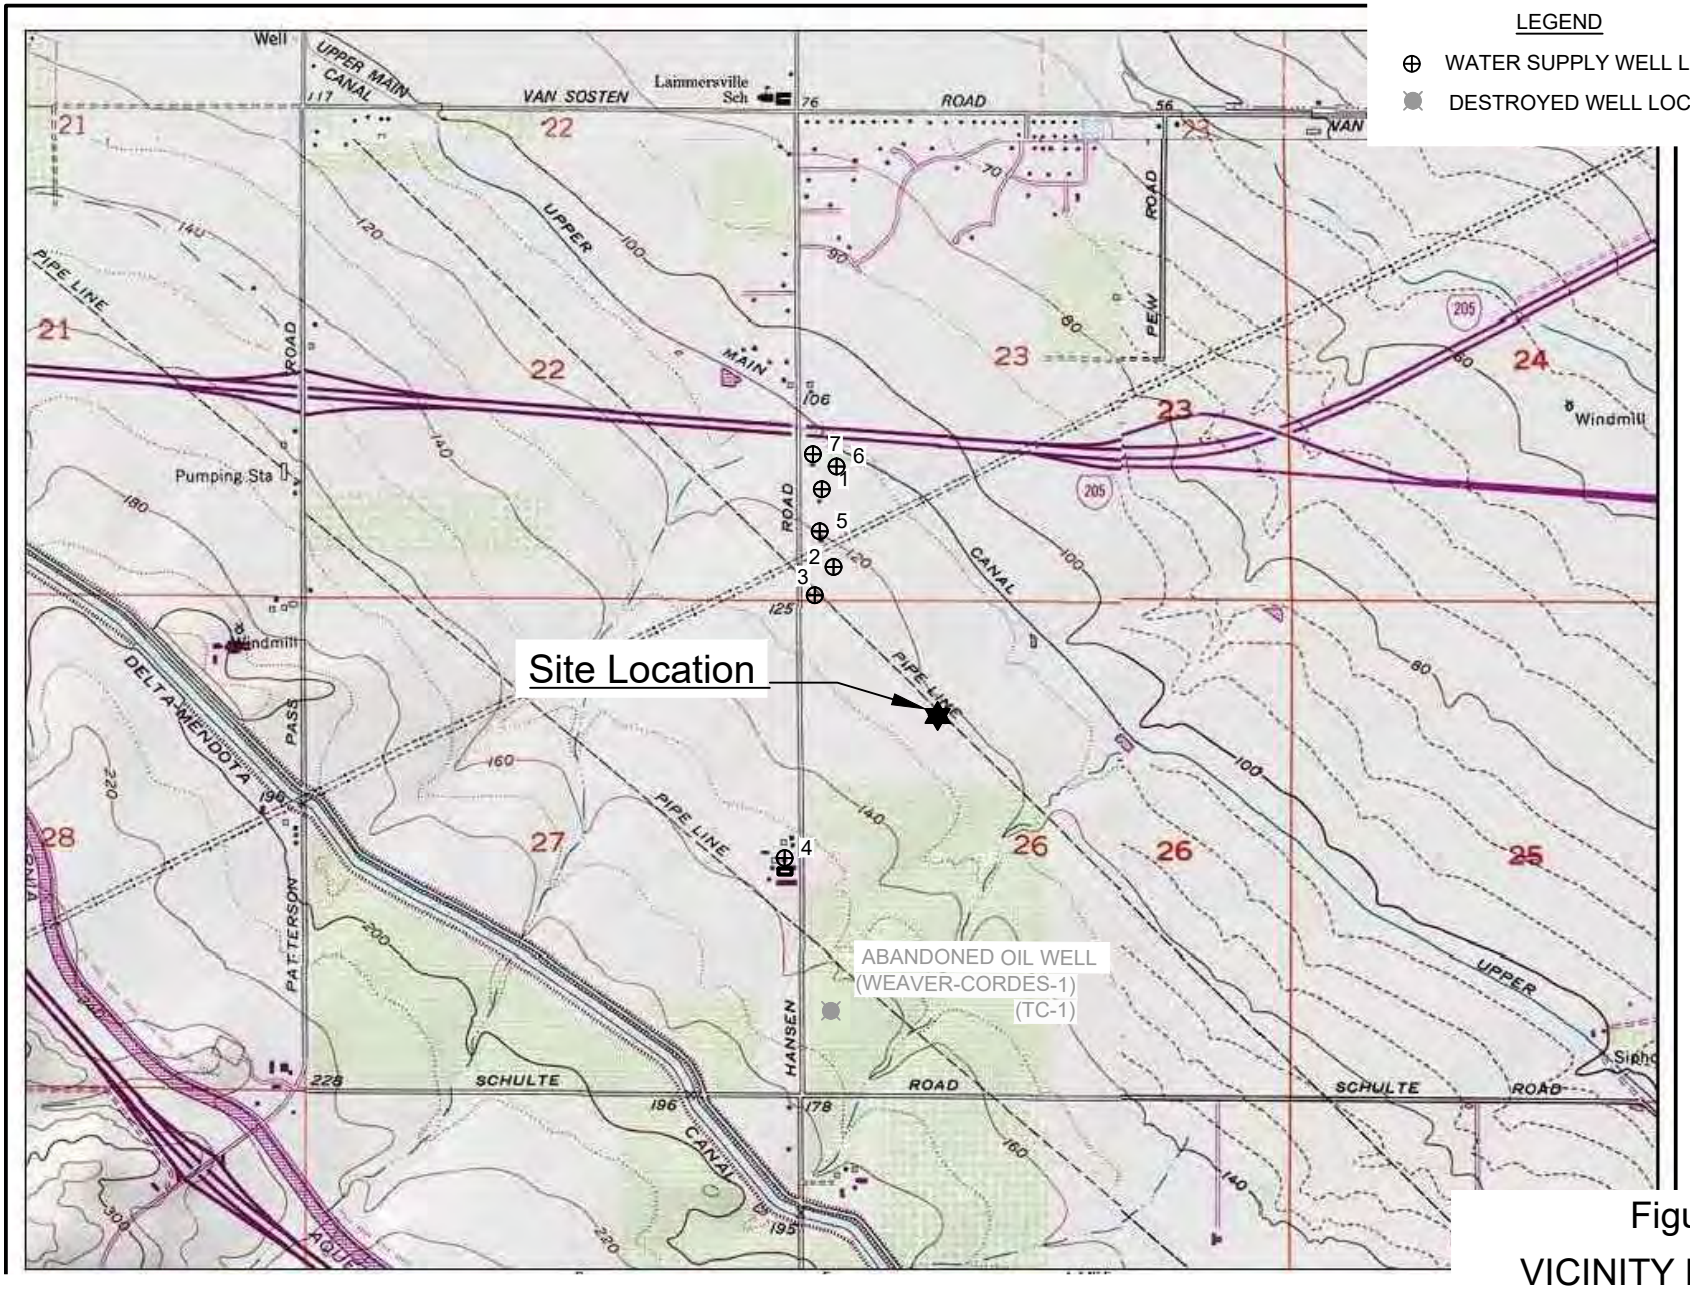


[1] CRA, *Amended Soil Management Plan*, December 5, 2014 approved in CV-RWQCB's January 6, 2015 letter.

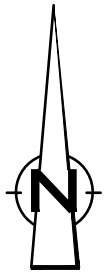
# 5. Recommendations

GHD recommends monitoring groundwater in the new wells (MW-17 through MW-24) on a quarterly basis for one hydrologic cycle to confirm the TPHc plume extent and behavior, and determine the appropriate path forward.

GHD's *Groundwater Monitoring Report – First Quarter 2016* requested that the semi-annual monitoring of well MW-16 be discontinued. Petroleum hydrocarbons have not been detected in MW-16 during all six sampling events starting in June 2014. If approved by the CV-RWQCB, GHD will properly destroy MW-16 following the procedures detailed in our August 31, 2016 *Site Investigation Work Plan*. GHD will continue monitoring the residential wells on an annual basis.



All of Which is Respectfully Submitted,
GHD



Peter Schaefer, CEG, CHG

SUBJECT: Public Records Request
LOCATION: 16000 W Schulte Rd, Tracy

Dear Margaret Carroll:

The District has processed your request for information regarding the above mentioned site address/location. A search of the District's databases has returned no records on file for this location.

If you have any questions, or need additional information, please contact me at the number below.

Respectfully,

Theresa Haywood
Senior Office Assistant
San Joaquin Valley
Air Pollution Control District
4800 Enterprise Way
Modesto, CA 95356.8718
Phone: (209) 557.6406
Fax: (209) 557.6475
Theresa.Haywood@valleyair.org
Service * Teamwork * Attitude * Respect

Thank you for using our Online Public Records Request System. We will be working to process your request as quickly as possible.

The Control Number for this request is C-2018-4-74

Please use this number when referencing your request. You will also be receiving a comfirmation email with the Control Number included.

To contact the Air District, call a regional office in Fresno (559-230-6000), Modesto (209-557-6400) or Bakersfield (661-392-5500).

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Kleinfelder, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

## *Certified Sanborn Results:*

### UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 196A-4F49-A00E

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

*The Sanborn Library LLC Since 1866™*

### Limited Permission To Make Copies

Kleinfelder, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

# EXECUTIVE SUMMARY

## DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

## RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Contact: Paolo Dizon

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Kleinfelder, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

## SAMPLE RECEIVING EXCEPTION REPORTS

**CLS Labs Job #** 18D1101

**Problem discovered by:** CP **Date:** 4/19/18

**Nature of problem**

- PAGE 8 OF 10 SHOWS SAMPLES WITHOUT ANALYSES
- PAGE 10 OF 10 DOES NOT HAVE A SAMPLING DATE FOR ALL SAMPLES.

**Client contacted?** Yes / **No** ____ **Spoke With:** PAOLO DIZON

**By whom:** CHELLIE F **Date:** 4/20/18 **Time:** 1220 HRS

**Client instructions:**

- SAMPLES ON PAGE 8 OF 10 SHOULD BE 4:1 COMPS FOR 8081
- SAMPLES ON PAGE 10 OF 10 WERE SAMPLED ON 4/18/18.

**Resolution of problem:**

- LOGGED IN PER PAOLO DIZON.

## Notes and Definitions

| | |
|---|---|
| QS-4 | The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect. |
| QM-7T | The spike recovery was outside acceptance limits for these analytes in both the MS and MSD due to toxaphene/chlordane interference from the source. The batch was accepted based on acceptable LCS/LCSD recovery. |
| QM-5 | The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data is acceptable. |
| DET | Analyte DETECTED |
| ND | Analyte NOT DETECTED at or above the reporting limit (or method detection limit when specified) |
| NR | Not Reported |
| dry | Sample results reported on a dry weight basis |
| RPD | Relative Percent Difference |

Roseville, CA 95678

This section provides a general description of the existing noise sources in the Project vicinity, a discussion of the regulatory setting, and identifies potential noise impacts associated with the proposed Project. Project impacts are evaluated relative to applicable noise level criteria and to the existing ambient noise environment. Mitigation measures have been identified for significant noise-related impacts. However, one impact remains significant and unavoidable.

There were no Notice of Preparation comments received regarding this topic. As discussed in the Initial Study (see Appendix A), the proposed Project is not located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport. The closest airport is the Tracy Municipal Airport, located approximately three and a half miles southeast of the Project site. As such, there is ***no impact*** related to these CEQA topics, and these topics are not relevant to the proposed Project and will not be addressed further in this EIR beyond the discussion and analysis in the Initial Study.

## 3.11.1 ENVIRONMENTAL SETTING

### KEY TERMS

| | |
|---|---|
| **Acoustics** | The science of sound. |
| **Ambient Noise** | The distinctive acoustical characteristics of a given area consisting of all noise sources audible at that location. In many cases, the term ambient is used to describe an existing or pre-project condition such as the setting in an environmental noise study. |
| **Attenuation** | The reduction of noise. |
| **A-Weighting** | A frequency-response adjustment of a sound level meter that conditions the output signal to approximate human response. |
| **Decibel or dB** | Fundamental unit of sound, defined as ten times the logarithm of the ratio of the sound pressure squared over the reference pressure squared. |
| **CNEL** | Community noise equivalent level. Defined as the 24-hour average noise level with noise occurring during evening hours (7 - 10 p.m.) weighted by a factor of three and nighttime hours weighted by a factor of 10 prior to averaging. |
| **Frequency** | The measure of the rapidity of alterations of a periodic acoustic signal, expressed in cycles per second or Hertz. |
| **Impulsive** | Sound of short duration, usually less than one second, with an abrupt onset and rapid decay. |
| **$L_{dn}$** | Day/Night Average Sound Level. Similar to CNEL but with no evening weighting. |
| **$L_{eq}$** | Equivalent or energy-averaged sound level. |
| **$L_{max}$** | The highest root-mean-square (RMS) sound level measured over a given period of time. |
| **$L_{(n)}$** | The sound level exceeded a described percentile over a measurement period. For instance, an hourly $L_{50}$ is the sound level exceeded 50 percent of the time during the one-hour period. |
| **Loudness** | A subjective term for the sensation of the magnitude of sound. |

**Noise** Unwanted sound.

**SEL** Sound exposure levels. A rating, in decibels, of a discrete event, such as an aircraft flyover or train passby, that compresses the total sound energy into a one-second event.

## FUNDAMENTALS OF ACOUSTICS

Acoustics is the science of sound. Sound may be thought of as mechanical energy of a vibrating object transmitted by pressure waves through a medium to human (or animal) ears. If the pressure variations occur frequently enough (at least 20 times per second), then they can be heard and are called sound. The number of pressure variations per second is called the frequency of sound, and is expressed as cycles per second or Hertz (Hz).

Noise is a subjective reaction to different types of sounds. Noise is typically defined as (airborne) sound that is loud, unpleasant, unexpected or undesired, and may therefore be classified as a more specific group of sounds. Perceptions of sound and noise are highly subjective from person to person.

Measuring sound directly in terms of pressure would require a very large and awkward range of numbers. To avoid this, the decibel scale was devised. The decibel scale uses the hearing threshold (20 micropascals), as a point of reference, defined as 0 dB. Other sound pressures are then compared to this reference pressure, and the logarithm is taken to keep the numbers in a practical range. The decibel scale allows a million-fold increase in pressure to be expressed as 120 dB, and changes in levels (dB) correspond closely to human perception of relative loudness.

The perceived loudness of sounds is dependent upon many factors, including sound pressure level and frequency content. However, within the usual range of environmental noise levels, perception of loudness is relatively predictable, and can be approximated by A-weighted sound levels. There is a strong correlation between A-weighted sound levels (expressed as dBA) and the way the human ear perceives sound. For this reason, the A-weighted sound level has become the standard tool of environmental noise assessment. All noise levels reported in this section are in terms of A-weighted levels, but are expressed as dB, unless otherwise noted.

The decibel scale is logarithmic, not linear. In other words, two sound levels 10 dB apart differ in acoustic energy by a factor of 10. When the standard logarithmic decibel is A-weighted, an increase of 10 dBA is generally perceived as a doubling in loudness. For example, a 70 dBA sound is half as loud as an 80 dBA sound, and twice as loud as a 60 dBA sound.

Community noise is commonly described in terms of the ambient noise level, which is defined as the all-encompassing noise level associated with a given environment. A common statistical tool to measure the ambient noise level is the average, or equivalent, sound level ($L_{eq}$), which corresponds to a steady-state A weighted sound level containing the same total energy as a time varying signal over a given time period (usually one hour). The $L_{eq}$ is the foundation of the composite noise descriptor, $L_{dn}$, and shows very good correlation with community response to noise.

The day/night average level ($L_{dn}$) is based upon the average noise level over a 24-hour day, with a +10 decibel weighing applied to noise occurring during nighttime (10:00 p.m. to 7:00 a.m.) hours. The nighttime penalty is based upon the assumption that people react to nighttime noise exposures as though they were twice as loud as daytime exposures. Because $L_{dn}$ represents a 24-hour average, it tends to disguise short-term variations in the noise environment. CNEL is similar to $L_{dn}$, but includes a +5 dB penalty for evening noise. Table 3.11-1 lists several examples of the noise levels associated with common situations.

***TABLE 3.11-1: TYPICAL NOISE LEVELS***

| *COMMON OUTDOOR ACTIVITIES* | *NOISE LEVEL (DBA)* | *COMMON INDOOR ACTIVITIES* |

## EFFECTS OF NOISE ON PEOPLE

The effects of noise on people can be placed in three categories:

- Subjective effects of annoyance, nuisance, and dissatisfaction;
- Interference with activities such as speech, sleep, and learning; and
- Physiological effects such as hearing loss or sudden startling.

Environmental noise typically produces effects in the first two categories. Workers in industrial plants can experience noise in the last category. There is no completely satisfactory way to measure the subjective effects of noise or the corresponding reactions of annoyance and dissatisfaction. A wide variation in individual thresholds of annoyance exists and different tolerances to noise tend to develop based on an individual's past experiences with noise.

Thus, an important way of predicting a human reaction to a new noise environment is the way it compares to the existing environment to which one has adapted: the so-called ambient noise level. In general, the more a new noise exceeds the previously existing ambient noise level, the less

acceptable the new noise will be judged by those hearing it. With regard to increases in A-weighted noise level, the following relationships occur:

- Except in carefully controlled laboratory experiments, a 1 dBA change cannot be perceived;
- Outside of the laboratory, a 3 dBA change is considered a just-perceivable difference;
- A change in level of at least 5 dBA is required before any noticeable change in human response would be expected; and
- A 10 dBA change is subjectively heard as approximately a doubling in loudness, and can cause an adverse response.

Stationary point sources of noise – including stationary mobile sources such as idling vehicles – attenuate (lessen) at a rate of approximately 6 dB per doubling of distance from the source, depending on environmental conditions (i.e., atmospheric conditions and either vegetative or manufactured noise barriers, etc.). Widely distributed noises, such as a large industrial facility spread over many acres, or a street with moving vehicles, would typically attenuate at a lower rate.

## EXISTING NOISE LEVELS

### Existing and Surrounding Land Uses

The Project site is located at 16000 West Schulte Road in unincorporated San Joaquin County, California (Figures 2.0-1 and 2.0-2). The Project site is within the Tracy Sphere of Influence (SOI) 10-Year Planning Horizon and is immediately adjacent to the Tracy city limits to the north of the site. The site contains undeveloped land previously used for agricultural purposes.

The Project site is immediately south of the intersection of Bud Lyons Way and West Schulte Road. The Project site is bounded on the north by West Schulte Road, on the west by an unnamed driveway serving the adjacent rural residence, on the south by the Delta Mendota Canal, and on the east by vacant agricultural land.

In the vicinity of the Project site, surrounding land uses include mostly vacant and agricultural lands, as well as some existing rural residential and industrial uses. Rural residential uses are located directly west of the Project site. Under the proposed Project, these rural residential land uses will remain outside the boundaries of the City of Tracy, within the boundaries of San Joaquin County.

### Existing Ambient Noise Levels

To quantify the existing ambient noise environment in the Project vicinity, three continuous (24-hour) noise level measurements were conducted near receptors adjacent to the Project site from November 7$^{th}$ to November 8$^{th}$, 2019. A short-term noise level measurement was conducted at one location on the northwestern Project boundary on November 7$^{th}$, 2019. The noise measurement locations are shown on Figure 3.11-1. The noise level measurement survey results are provided in Table 3.11-2. Appendix B of Appendix E shows the complete results of the continuous noise monitoring at sites LT-1, LT-2, LT-3, and ST-1.

***TABLE 3.11-2: SUMMARY OF EXISTING BACKGROUND NOISE MEASUREMENT DATA***

| SITE | LOCATION | $L_{DN}$ | AVERAGE MEASURED HOURLY NOISE LEVELS, dB | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | | DAYTIME (7AM-10PM) | | | NIGHTTIME (10PM-7AM) | | |
| | | | $L_{EQ}$ | $L_{50}$ | $L_{MAX}$ | $L_{EQ}$ | $L_{50}$ | $L_{MAX}$ |
| CONTINUOUS (24-HOUR) NOISE LEVEL MEASUREMENTS | | | | | | | | |
| LT-1 | Western Project Boundary | 63 | 56 | 52 | 74 | 57 | 54 | 72 |
| LT-2 | Southwestern Project Boundary | 56 | 48 | 44 | 61 | 49 | 48 | 60 |
| LT-3 | Southeastern Project Boundary | 55 | 47 | 42 | 61 | 49 | 47 | 56 |
| SHORT-TERM NOISE LEVEL MEASUREMENTS | | | | | | | | |
| ST-1 | Northwestern Project Boundary | N/A | 72 | 58 | 88 | N/A | N/A | N/A |

*SOURCE: SAXELBY ACOUSTICS, 2019.*

The sound level meters were programmed to record the maximum, median, and average noise levels at each site during the survey. The maximum value ($L_{max}$) represents the highest noise level measured during an interval. The average value ($L_{eq}$) represents the energy average of all of the noise measured during an interval. The median value ($L_{50}$) represents the sound level exceeded 50 percent of the time during an interval.

Larson Davis Laboratories (LDL) Model 812, 820, and 831 precision integrating sound level meters were used for the ambient noise level measurement survey. The meters were calibrated before and after use with an LDL Model CAL200 acoustical calibrator to ensure the accuracy of the measurements. The equipment used meets all pertinent specifications of the American National Standards Institute for Type 1 sound level meters (ANSI S1.4).

## EXISTING ROADWAY NOISE LEVELS

To predict existing noise levels due to traffic, the Federal Highway Administration (FHWA) Highway Traffic Noise Prediction Model (FHWA RD-77-108) was used. The model is based upon the Calveno reference noise emission factors for automobiles, medium trucks, and heavy trucks, with consideration given to vehicle volume, speed, roadway configuration, distance to the receiver, and the acoustical characteristics of the site. The FHWA model was developed to predict hourly $L_{eq}$ values for free-flowing traffic conditions. While the newer FHWA traffic noise model (TNM 3.0) is required for use on federally funded highway projects, the FHWA RD-77-108 model is still widely used in the industry and recognized as an accurate screening tool, typically resulting in slight over-predictions in traffic noise levels at typical receptor setback distances.

Traffic volumes for existing conditions were obtained from the traffic data prepared for the proposed Project (Kimley Horn, 2021). Vehicle speeds on the local area roadways were estimated from field observations.

Traffic noise levels are predicted at the sensitive receptors located at the closest typical setback distance along each Project-area roadway segment. Table 3.11-3 shows the existing traffic noise levels in terms of $L_{dn}$ at closest sensitive receptors along each roadway segment. A complete listing of the FHWA Model input data is contained in Appendix C of Appendix E.

## 3.11.2 REGULATORY SETTING

### FEDERAL

There are no federal regulations related to noise that apply to the proposed Project.

### STATE

#### California Environmental Quality Act

The California Environmental Quality Act (CEQA) Guidelines, Appendix G, indicate that a significant noise impact may occur if a project exposes persons to noise or vibration levels in excess of local general plans or noise ordinance standards, or cause a substantial permanent or temporary increase in ambient noise levels. CEQA standards are discussed more below under the Thresholds of Significance section.

# LOCAL

The Project site is located within an unincorporated area of San Joaquin County and requires annexation into the City of Tracy. The City of Tracy addresses noise in the Noise Element of the General Plan and in the Tracy Municipal Code.

## City of Tracy General Plan

The Noise Element establishes standards to provide compatible noise environments for new development or redevelopment projects and to control excessive noise exposure of existing developments. Goals, policies, actions, and standards provided in the Noise Element provide the basis for decision-making on determining land use compatibility with noise sources associated with the proposed Project, as well as mitigation requirements. The following objectives and policies are specfically relavaent to the prposed project:

**Objective N-1.2 Control sources of excessive noise.**

**Policies**

P2. Mitigation measures shall be required for new development projects that exceed the following criteria:

- Cause the Ldn at noise-sensitive uses to increase by 3 dB or more and exceed the "normally acceptable" level.
- Cause the Ldn at noise-sensitive uses to increase 5 dB or more and remain "normally acceptable."
- Cause new noise levels to exceed the City of Tracy Noise Ordinance Limits.

P4. All construction in the vicinity of noise sensitive land uses, such as residences, hospitals, or convalescent homes, shall be limited to daylight hours or 7:00 a.m. to 7:00 p.m. In addition, the following construction noise control measures shall be included as requirements at construction sites to minimize construction noise impacts:

- Equip all internal combustion engine-driven equipment with intake and exhaust mufflers that are in good condition and appropriate for the equipment.
- Locate stationary noise-generating equipment as far as possible from sensitive receptors when sensitive receptors adjoin or are near a construction area.
- Utilize "quiet" air compressors and other stationary noise sources where technology exists.

Figure 9-3 of the Noise Element shows a summary of different land uses in the City and their associated acceptable and unacceptable noise levels. These guidelines state that environments with noise levels ranging up to 60 dBA Ldn are considered "normally acceptable" for new residential land use development; environments with ambient noise levels greater than 60 dBA and up to 75 dBA Ldn are considered "conditionally acceptable" for new residential development.

## City of Tracy Municipal Code

Title 4, Chapter 12, Article 9 of the Tracy Municipal Code also contains guidance with the intent to control noise and vibration to promote and maintain the health, safety, and welfare of its residents. Section 4.12.720 of the Municipal Code generally prohibits certain activities that have the potential to result in loud, excessive, or unreasonable noise levels. According to the general sound level limits for residential districts, no person shall cause or allow the creation of any noise to the extent that the one-hour average sound level, at any point on or beyond the boundaries of the property on which the sound is produced to exceed 55 dBA for any one-hour average period. Specific activities enumerated in the municipal code that could potentially pertain to the proposed project include minor maintenance to or improvement of real property. This limitation prohibits the generation of construction noise, other than between the hours of 7:00 a.m. and 10:00 p.m. on weekdays or between the hours of 7:00 a.m. and 10:00 p.m. on weekends and federal holidays. The noise ordinance also specifically prohibits the operation of any pneumatic or air hammer, pile driver, steam shovel, derrick, steam or electric hoist, parking lot cleaning equipment, or other appliance, the use of which is attended by loud or unusual noise, between the hours of 10:00 p.m. and 7:00 a.m on weekends and federal holidays.

## San Joaquin County General Plan

Table PHS-2 of the San Joaquin County 2035 General Plan establishes an acceptable exterior noise level standard of 65 dBA $L_{dn}$ and an interior noise level standard of 45 dBA $L_{dn}$ for residential uses exposed to transportation noise sources.

For non-transportation noise sources, the General Plan establishes the standards for sensitive uses. See Table 3.11-4.

***TABLE 3.11-4: SAN JOAQUIN COUNTY GENERAL PLAN NON-TRANSPORTATION NOISE STANDARDS[1,2]***

| *NOISE LEVEL DESCRIPTOR* | *OUTDOOR ACTIVITY AREA[3] DAYTIME (7 A.M. TO 10 P.M.)* | *OUTDOOR ACTIVITY AREAS[3] NIGHTTIME (10 P.M. TO 7 A.M.)* |
|---|---|---|
| Hourly equivalent sound level ($L_{eq}$), dB | 50 | 45 |
| Maximum sound level ($L_{max}$), dB | 70 | 65 |

*[1] WHERE THE LOCATION OF OUTDOOR ACTIVITY AREAS IS UNKNOWN OR IS NOT APPLICABLE, THE NOISE STANDARD SHALL BE APPLIED AT THE PROPERTY LINE OF THE RECEIVING LAND USE. WHEN DETERMINING THE EFFECTIVENESS OF NOISE MITIGATION MEASURES, THE STANDARDS SHALL BE APPLIED ON THE RECEIVING SIDE OF NOISE BARRIERS OR OTHER PROPERTY LINE NOISE MITIGATION MEASURES.*

*[2] REFER TO MOUNTAIN HOUSE MASTER PLAN, TABLE 11.2, EXTERIOR NOISE STANDARDS FOR NOISE-SENSITIVE USES AFFECTED BY NON- TRANSPORTATION NOISE SOURCES, PAGE 11.12, FOR MOUNTAIN HOUSE NOISE STANDARDS.*

*[3] EACH OF THE NOISE LEVEL STANDARDS SPECIFIED SHALL BE REDUCED BY 5 DB FOR IMPULSIVE NOISE, SINGLE TONE NOISE, OR NOISE CONSISTING PRIMARILY OF SPEECH OR MUSIC.*

*SOURCE: SAN JOAQUIN COUNTY GENERAL PLAN, TABLE PHS-1.*

## San Joaquin County Development Regulations

The San Joaquin County Development Regulations, Section 9-1025.9(b), establish land use noise level standards for new non-transportation or "stationary" noise sources, as outlined below that would be applicable to the proposed Project.

9-1025.9(B) – STATIONARY NOISE SOURCES.

Proposed projects that will create new stationary noise sources shall be required to mitigate the noise levels from these stationary noise sources so as not to exceed the noise level standards specified in Table 9-1025.9(b), Part II (Table 3.11-5).

***TABLE 3.11-5: STATIONARY NOISE SOURCES***

| *NOISE LEVEL DESCRIPTOR* | *OUTDOOR ACTIVITY AREAS[1] DAYTIME[2] (7 A.M. TO 10 P.M.)* | *OUTDOOR ACTIVITY AREAS[1] NIGHTTIME[2] (10 P.M. TO 7 A.M.)* |
|---|---|---|
| Hourly equivalent sound level ($L_{eq}$), dB | 50 | 45 |
| Maximum sound level ($L_{max}$), dB | 70 | 65 |

*NOTES: [1]WHERE THE LOCATION OF OUTDOOR ACTIVITY AREAS IS UNKNOWN OR IS NOT APPLICABLE, THE NOISE STANDARD SHALL BE APPLIED AT THE PROPERTY LINE OF THE RECEIVING LAND USE. # VIBRATION STANDARDS

Vibration is like noise in that it involves a source, a transmission path, and a receiver. While vibration is related to noise, it differs in that in that noise is generally considered to be pressure waves transmitted through air, whereas vibration usually consists of the excitation of a structure or surface. As with noise, vibration consists of an amplitude and frequency. A person's perception to the vibration will depend on their individual sensitivity to vibration, as well as the amplitude and frequency of the source and the response of the system which is vibrating.

Vibration can be measured in terms of acceleration, velocity, or displacement. A common practice is to monitor vibration measures in terms of peak particle velocities in inches per second. Standards pertaining to perception as well as damage to structures have been developed for vibration levels defined in terms of peak particle velocities.

The City of Tracy does not have specific policies pertaining to vibration levels. Human and structural response to different vibration levels is influenced by a number of factors, including ground type, distance between source and receptor, duration, and the number of perceived vibration events. Table 3.11-6 indicates that the threshold for damage to structures ranges from 0.2 to 0.6 peak particle velocity in inches per second (in/sec p.p.v). A threshold of 0.20 in/sec p.p.v. is considered to be a reasonable threshold for short-term construction projects.

***TABLE 3.11-6: EFFECTS OF VIBRATION ON PEOPLE AND BUILDINGS***

| P.P.V. | | HUMAN REACTION | EFFECT ON BUILDINGS |
|---|---|---|---|
| MM/SEC. | IN./SEC. | | |
| 0.15-0.30 | 0.006-0.019 | Threshold of perception; possibility of intrusion | Vibrations unlikely to cause damage of any type |
| 2.0 | 0.08 | Vibrations readily perceptible | Recommended upper level of the vibration to which ruins and ancient monuments should be subjected |
| 2.5 | 0.10 | Level at which continuous vibrations begin to annoy people | Virtually no risk of "architectural" damage to normal buildings |
| 5.0 | 0.20 | Vibrations annoying to people in buildings (this agrees with the levels established for people standing on bridges and subjected to relative short periods of vibrations) | Threshold at which there is a risk of "architectural" damage to normal dwelling - houses with plastered walls and ceilings. Special types of finish such as lining of walls, flexible ceiling treatment, etc., would minimize "architectural" damage |
| 10-15 | 0.4-0.6 | Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges | Vibrations at a greater level than normally expected from traffic, but would cause "architectural" damage and possibly minor structural damage. |

## 3.11.3 IMPACTS AND MITIGATION MEASURES

### THRESHOLDS OF SIGNIFICANCE

Consistent with Appendix G of the CEQA Guidelines, the Project will have a significant impact related to noise if it will result in:

- Generation of a temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies; and/or
- Generation of excessive groundborne vibration or groundborne noise levels.

### Determination of a Significant Increase in Noise Levels

#### TEMPORARY CONSTRUCTION NOISE IMPACTS

With temporary noise impacts (construction), identification of "substantial increases" depends upon the duration of the impact, the temporal daily nature of the impact, and the absolute change in decibel levels. Per the City of Tract General Plan noise Policy P4, "All construction in the vicinity of noise sensitive land uses, such as residences, hospitals, or convalescent homes, shall be limited to daylight hours or 7:00 a.m. to 7:00 p.m. Per the City of Tracy noise ordinance, construction activities operating between 10 p.m. and 7 a.m. that create a noise disturbance at the property boundary of a residence are prohibited.

For short-term noise associated with project construction, Saxelby Acoustics recommends use of the Caltrans increase criteria of 12 dBA (Caltrans Traffic Noise Protocol, 2020) to determine whether the construction noise constitutes a significant increase under CEQA.

### OPERATIONAL IMPACTS

The noise standards applicable to the proposed Project include the relevant portions of the City of Tracy and County of San Joaquin General Plan and Municipal Code described in the Regulatory Setting section above (Section 3.11.2), and the following standards. Generally, a project may have a significant effect on the environment if it will substantially increase the ambient noise levels for adjoining areas or expose people to severe noise levels. In practice, more specific professional standards have been developed. These standards state that a noise impact may be considered significant if it would generate noise that would conflict with local project criteria or ordinances, or substantially increase noise levels at noise sensitive land uses. The potential increase in traffic noise from the proposed Project is a factor in determining significance.

Per noise Policy P2, the following test of significance would be applied to operational noise increases:

- Cause the Ldn at noise-sensitive uses to increase by 3 dB or more and exceed the "normally acceptable" level.
- Cause the Ldn at noise-sensitive uses to increase 5 dB or more and remain "normally acceptable."
- Cause new noise levels to exceed the City of Tracy Noise Ordinance Limits.

It should be noted that 60 dBA Ldn is the City's "normally acceptable" noise standard.

## IMPACTS AND MITIGATION MEASURES

### Impact 3.11-1: The proposed Project has the potential to generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the Project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. (Significant and Unavoidable)

### Traffic Noise Environment at Off-Site Receptors With and Without the Project

Implementation of the proposed Project would result in an increase in daily traffic volumes on the local roadway network, and consequently, an increase in noise levels from traffic sources along affected segments. Tables 3.11-8 and 3.11-9 show the predicted traffic noise level increases on the local roadway network for Background, Background Plus Project, Cumulative No Project, and Cumulative Plus Project conditions. Appendix C of Appendix E provides the complete inputs and results of the FHWA traffic noise modeling.

***TABLE 3.11-8: BACKGROUND AND BACKGROUND PLUS PROJECT TRAFFIC NOISE LEVELS***

## Project-Generated Non-Transportation Noise Environment at Off-Site Receptors

The primary non-transportation noise sources associated with the proposed Project are on-site parking lot circulation and the proposed loading docks. In order to evaluate these noise sources at the nearest sensitive receptors, Saxelby Acoustics used the SoundPLAN noise prediction model to generate noise level predictions according to the assumptions outlined below.

The SoundPLAN noise prediction model was used to plot noise contours and to calculate noise levels at the sensitive receptors located around the Project site. Inputs to the SoundPLAN model included ground topography and ground type, noise source locations and heights, receiver locations, and sound power level data. These predictions are made in accordance with International Organization for Standardization (ISO) standard 9613-2:1996 (Acoustics – Attenuation of sound during propagation outdoors).

It should be noted that sound power is a measure of the total acoustic energy emitted by a noise source and is irrespective of distance from the source. Sound power is input into the SoundPLAN model as a representation of the total acoustic energy emitted by a specific noise source. Sound power levels in this report are A-weighted decibel levels, noted as "dBA, PWL" per industry standards. The model then corrects for the many factors (i.e., distance, terrain shielding, atmospheric absorption, etc.) which affect sound propagation from the noise source to the receiver location.

### LOADING DOCK NOISE GENERATION

To determine typical noise levels associated with the proposed loading docks, noise level measurement data from a United Natural Foods, Inc. (UNFI) warehouse was used. The UNFI facility is an approximately 400,000 s.f. facility located in Rocklin, California and includes a large cold storage facility for distribution of groceries. The noise level measurements were conducted at a distance of 200 feet from the center of the loading dock and circulation area. Activities during the peak hour of loading dock activities included truck arrival/departures, truck idling, truck backing, air brake release, and operation of truck-mounted refrigeration units.

The results of the UNFI noise measurements indicate that a busy hour generated an average noise level of 61 dBA $L_{eq}$ at a distance of 200 feet from the center of the loading dock truck maneuvering lanes. This analysis assumes that the proposed loading docks would operate at this level of activity in a busy hour during either daytime (7:00 a.m. to 10:00 p.m.) or nighttime (10:00 p.m. to 7:00 a.m.). The data from the UNFI facility was scaled up to represent the larger proposed project. It should be

noted that the collected noise measurement data occurred during the week of Thanksgiving which is one of the busiest times of year for the business and included refrigeration trucks.

### PARKING LOT CIRCULATION

Based upon the Project traffic study, the peak hour trips for the proposed Project would be 276 autos and 125 tractor-trailers. Based upon noise measurements conducted of vehicle movements in parking lots, the sound exposure level (SEL) for a single passenger vehicle is 71 dBA at a distance of 50 feet while the SEL of a tractor-trailer is 85 dBA at the same distance.

Saxelby Acoustics used the SoundPLAN noise model to calculate noise levels at the nearest sensitive receptors. Input data included the loading dock and parking lot noise generation, as discussed above. Figure 3.11-2 shows the results of this analysis for the site layout in terms of the nighttime (10:00 p.m. to 7:00 a.m.) peak hour average ($L_{eq}$). Daytime (7:00 a.m. to 10:00 p.m.) noise levels are expected to be similar to the nighttime scenario. Figure 3.11-3 shows the results of this analysis in terms of the peak hour maximum noise levels ($L_{max}$). Due to the nature of loading dock operation and parking lot circulation, the maximum noise levels are the same for both daytime and nighttime.

## Construction Noise Environment

During the construction of the proposed Project, noise from construction activities would temporarily add to the noise environment in the Project vicinity. As shown in Table 3.11-10, activities involved in construction would generate maximum noise levels ranging from 76 to 90 dB at a distance of 50 feet.

***TABLE 3.11-10: CONSTRUCTION EQUIPMENT NOISE***

| *TYPE OF EQUIPMENT* | *MAXIMUM LEVEL, DB AT 50 FEET* |
|---|---|
| Auger Drill Rig | 84 |
| Backhoe | 78 |
| Compactor | 83 |
| Compressor (air) | 78 |
| Concrete Saw | 90 |
| Dozer | 82 |
| Dump Truck | 76 |

## Conclusions

### INCREASED TRAFFIC NOISE LEVELS AT EXISTING RECEPTORS

The City of Tracy guidelines specify criteria to determine the significance of traffic noise impacts. Where existing traffic noise levels are less than 60 dB $L_{dn}$, at the outdoor activity areas of noise-sensitive uses, a +5.0 dB $L_{dn}$ increase in roadway noise levels will be considered significant. According to Table 3.11-8 and Table 3.11-9, the maximum increase is traffic noise at the nearest sensitive receptor is predicted to be 3.6 dBA. At this location, the existing ambient noise level is predicted to be approximately 51.6 dBA $L_{dn}$. All other project increases are expected to be less than 1.5 dBA.

Therefore, impacts resulting at existing receptors from increased traffic noise would be considered ***less-than-significant***.

### OPERATIONAL NOISE LEVELS AT EXISTING RECEPTORS

Operational noise levels at the existing residential receptors to the west of the site resulting from the proposed Project are quantified and shown in Figures 3.11-2 and 3.11-3. Figure 3.11-2 shows the average ($L_{eq}$) Project noise contours and Figure 3.11-3 shows the maximum ($L_{max}$) Project noise contours.

Based upon Figure 3.11-2, the proposed Project would generate peak hour noise levels of up to 54 dBA $L_{eq}$ at the outdoor activity areas of adjacent residential uses. The adjacent residential uses would remain outside of the City of Tracy limits, so noise generated by the proposed Project at these locations would be subject to the San Joaquin County noise criteria. The predicted noise levels of up to 54 dBA $L_{eq}$ would exceed the San Joaquin County non-transportation noise limits of 50 dBA $L_{eq}$ during daytime (7:00 a.m. to 10:00 p.m.) hours and 45 dBA $L_{eq}$ during nighttime (10:00 p.m. to 7:00 a.m.) hours.

Based upon Figure 3.11-3, the proposed Project is predicted to generate maximum noise levels of approximately 68 dBA $L_{max}$ at the residential uses to the west of the Project site. This would comply with the San Joaquin County maximum noise level limits of 70 dBA $L_{max}$ during daytime hours but would exceed the County's 65 dBA $L_{max}$ standard during nighttime hours.

In order to reduce project-related noise levels, Saxelby Acoustics used the Sound PLAN noise model to evaluate the use of noise barriers for reducing project-related noise levels at the adjacent residential uses. Figure 3.11-4 shows the exterior noise levels in terms of the peak hour average ($L_{eq}$) noise level, with a 20-foot-tall acoustically absorbent screen wall located along the western boundary of the Project site. The resulting noise levels of up to 50 dBA $L_{eq}$ would comply with the County's 50 dBA $L_{eq}$ daytime standard but would still exceed the County's 45 dBA $L_{eq}$ nighttime noise standard. As such, a sound wall would not result in noise levels at or below the County's nighttime noise standard. Therefore, the County's exterior noise standards would still be exceeded and this would be a ***significant and unavoidable*** impact.

### CONSTRUCTION NOISE

During the construction phases of the proposed Project, noise from construction activities would add to the noise environment in the immediate Project vicinity. Based upon the Table 3.11-10 data, the proposed Project is predicted to generate construction noise levels of up to 90 dBA Lmax at a distance of 50 feet. The closest sensitive receptor to the Project site is approximately 1,300 feet from the center of the Project construction area. At this distance, construction noise would attenuate to approximately 62 dBA Lmax . Existing ambient noise levels as measured at Site LT-2 were measured to average 61 dBA Lmax in the vicinity of the nearest noise sensitive receptors. This increase of 1 dBA would be less than the 12 dBA test of significance for temporary construction noise impacts.

Compliance with the City's permissible hours of construction, as well as implementing the best management noise reduction techniques and practices (both outlined in Mitigation Measure 3.11-1), would ensure that construction noise would not result in a substantial temporary increase in ambient noise levels that would result in annoyance or sleep disturbance of nearby sensitive receptors. Therefore, with implementation of Mitigation Measure 3.11-1, temporary construction noise impacts would be ***less than significant***.

MITIGATION MEASURE(S)

***Mitigation Measure 3.11-1:*** *To reduce potential construction noise impacts during Project construction, the following multi-part mitigation measure shall be implemented for the Project:*

- *All construction equipment powered by internal combustion engines shall be muffled and maintained.*
- *Quiet construction equipment, particularly air compressors, shall be selected whenever possible.*
- *All stationary noise-generating construction equipment such as generators or air compressors shall be located as far as is practical from existing residences. In addition, the Project contractor shall place such stationary construction equipment so that emitted noise is directed away from sensitive receptors nearest the Project site.*
- *Unnecessary idling of internal combustion engines shall be prohibited.*
- *The construction contractor shall, to the maximum extent practical, locate on-site equipment staging areas so as to maximize the distance between construction-related noise sources and noise-sensitive receptors nearest the Project site during all Project construction.*
- *Construction shall be limited to 7:00 a.m. to 7:00 p.m. per General Plan Policy P4.*

*These requirements shall be noted on the Project improvement plans.*

## Impact 3.11-2: The proposed Project would not generate excessive groundborne vibration or groundborne noise levels. (Less than Significant)

Construction vibration impacts include human annoyance and building structural damage. Human annoyance occurs when construction vibration rises significantly above the threshold of perception. Building damage can take the form of cosmetic or structural damage.

The primary vibration-generating activities would be grading, utilities placement, and parking lot construction. Table 3.11-11 shows the typical vibration levels produced by construction equipment.

With the exception of vibratory compactors, the Table 3.11-11 data indicate that construction vibration levels anticipated for the proposed Project are less than the 0.2 in/sec threshold at a distance of 25 feet. Use of vibratory compactors within 26 feet of the adjacent buildings could cause vibrations in excess of 0.2 in/sec. Structures that could be impacted by construction-related vibrations, especially vibratory compactors/rollers, are located approximately 60 feet, or further, from the Project site. Therefore, this is a ***less-than-significant*** impact and no mitigation is required.

***TABLE 3.11-11: VIBRATION LEVELS FOR VARIOUS CONSTRUCTION EQUIPMENT***

| *TYPE OF EQUIPMENT* | *P.P.V. AT 25 FEET (INCHES/SECOND)* | *P.P.V. AT 50 FEET (INCHES/SECOND)* | *P.P.V. AT 100 FEET (INCHES/SECOND)* |

## Appendix A: Acoustical Terminology

| | |
|---|---|
| **Acoustics** | The science of sound. |
| **Ambient Noise** | The distinctive acoustical characteristics of a given space consisting of all noise sources audible at that location. In many cases, the term ambient is used to describe an existing or pre-project condition such as the setting in an environmental noise study. |
| **ASTC** | Apparent Sound Transmission Class. Similar to STC but includes sound from flanking paths and correct for room reverberation. A larger number means more attenuation. The scale, like the decibel scale for sound, is logarithmic. |
| **Attenuation** | The reduction of an acoustic signal. |
| **A-Weighting** | A frequency-response adjustment of a sound level meter that conditions the output signal to approximate human response. |
| **Decibel or dB** | Fundamental unit of sound, A Bell is defined as the logarithm of the ratio of the sound pressure squared over the reference pressure squared. A Decibel is one-tenth of a Bell. |
| **CNEL** | Community Noise Equivalent Level. Defined as the 24-hour average noise level with noise occurring during evening hours (7 - 10 p.m.) weighted by +5 dBA and nighttime hours weighted by +10 dBA. |
| **DNL** | See definition of Ldn. |
| **IIC** | Impact Insulation Class. An integer-number rating of how well a building floor attenuates impact sounds, such as footsteps. A larger number means more attenuation. The scale, like the decibel scale for sound, is logarithmic. |
| **Frequency** | The measure of the rapidity of alterations of a periodic signal, expressed in cycles per second or hertz (Hz). |
| **Ldn** | Day/Night Average Sound Level. Similar to CNEL but with no evening weighting. |
| **Leq** | Equivalent or energy-averaged sound level. |
| **Lmax** | The highest root-mean-square (RMS) sound level measured over a given period of time. |
| **L(n)** | The sound level exceeded a described percentile over a measurement period. For instance, an hourly L50 is the sound level exceeded 50% of the time during the one-hour period. |
| **Loudness** | A subjective term for the sensation of the magnitude of sound. |
| **NIC** | Noise Isolation Class. A rating of the noise reduction between two spaces. Similar to STC but includes sound from flanking paths and no correction for room reverberation. |
| **NNIC** | Normalized Noise Isolation Class. Similar to NIC but includes a correction for room reverberation. |
| **Noise** | Unwanted sound. |
| **NRC** | Noise Reduction Coefficient. NRC is a single-number rating of the sound-absorption of a material equal to the arithmetic mean of the sound-absorption coefficients in the 250, 500, 1000, and 2,000 Hz octave frequency bands rounded to the nearest multiple of 0.05. It is a representation of the amount of sound energy absorbed upon striking a particular surface. An NRC of 0 indicates perfect reflection; an NRC of 1 indicates perfect absorption. |
| **RT60** | The time it takes reverberant sound to decay by 60 dB once the source has been removed. |
| **Sabin** | The unit of sound absorption. One square foot of material absorbing 100% of incident sound has an absorption of 1 Sabin. |
| **SEL** | Sound Exposure Level. SEL is a rating, in decibels, of a discrete event, such as an aircraft flyover or train pass by, that compresses the total sound energy into a one-second event. |
| **SPC** | Speech Privacy Class. SPC is a method of rating speech privacy in buildings. It is designed to measure the degree of speech privacy provided by a closed room, indicating the degree to which conversations occurring within are kept private from listeners outside the room. |
| **STC** | Sound Transmission Class. STC is an integer rating of how well a building partition attenuates airborne sound. It is widely used to rate interior partitions, ceilings/floors, doors, windows and exterior wall configurations. The STC rating is typically used to rate the sound transmission of a specific building element when tested in laboratory conditions where flanking paths around the assembly don't exist. A larger number means more attenuation. The scale, like the decibel scale for sound, is logarithmic. |
| **Threshold of Hearing** | The lowest sound that can be perceived by the human auditory system, generally considered to be 0 dB for persons with perfect hearing. |
| **Threshold of Pain** | Approximately 120 dB above the threshold of hearing. |
| **Impulsive** | Sound of short duration, usually less than one second, with an abrupt onset and rapid decay. |
| **Simple Tone** | Any sound which can be judged as audible as a single pitch or set of single pitches. |

# APPENDIX F

## Traffic Analysis

# MEMORANDUM

**From:** Frederik Venter, PE and Colin Ogilvie | Kimley-Horn and Associates

**To:** Robert Armijo, PE | City of Tracy

**Date:** September 12, 2022

**Re:** **Costco Direct Delivery Center Traffic Analysis**

---

## 1. Executive Summary

The proposed Costco Direct Delivery Center (Project) consists of two buildings totaling 1,782,317 square feet of warehouse space located south of Old Schulte Road.

The Project proposes three driveways along Old Schulte Road (two signals and one right-in, right-out).

The project will generate 401 AM and 87 PM peak hour trips. In the AM 30.8% and in the PM 21.7% will be trucks, respectively.

The following sections summarize the findings of this report:

*Traffic Review*

**VMT Analysis**

The proposed Costco distribution warehouse project was evaluated using the City of Tracy VMT Calculator. For the surrounding industrial land use area, the City's threshold is 9.4 VMT per Employee. The evaluation tool estimates that the Project would generate 24.8 VMT per Employee, and the Project exceeds the threshold by 164%.

**TDM Program**

This program recommends TDM measures that would individually reduce the Project's VMT and trips with the goal of obtaining a feasible maximum of 15% VMT reduction. **Table 1** lists the toolbox of potential TDM measures that could partially mitigate the Project's VMT impact. Maximum TDM reductions are provided for each TDM element. The applicant will select specific TDM measures in consultation with the City to mitigate the VMT impact.

This TDM program aims to achieve a feasible maximum of 15% VMT reduction, with the opportunity for 13% VMT reduction coming from the VMT Banking Fee Program as discussed after this section.

For the TDM program, the following TDM measures are being proposed:

1. Commuting Strategies– 1%
    a. Emergency Ride Home (ERH) Program: The Project will provide an occansional subsidized ride to commuters who use alternative modes. Guaranteed ride home for people if they need to go home in the middle of the day due to an emergency or stay late and need a ride at a time when transit service is not available.
2. Shared Mobility Strategies – 1%
    a. Designated Parking for Car Share Vehicles: The Project will provide preferential parking in convient locations in terms of free or reduced parking fees, priority parking, or reserved parking for commuters who carpool, vanpool, ride-share, or use alternatively fueled vehicles.

**VMT Banking Fees**

The City of Tracy VMT Banking Fee Program is a programmatic approach to respond to the need for feasible VMT mitigation programs. Programmatic approaches that rely on collectively funding larger projects allow a project to obtain an amount of mitigation commensurate with their impact, include only a single payment without the complexity of ongoing management, and do not require on-going mitigation monitoring. Programmatic approaches can also provide a public benefit in terms of funding transportation improvements that would not otherwise be constructed, resulting in improvements to congestion, GHG emissions, increased transportation choices, and additional opportunities for active transportation.

The VMT Banking Fee Program calculates the cost per VMT reduction as $633.11. Therefore, to achieve a the 13% reduction needed after implementation of the TDM program, the project would be responsible to pay $510,286.66. This is calculated as 13% being equivalent to a 3.224 VMT per employee reduction. Since there are 250 employees and each employee needs to reduce by 3.224 VMT at a cost of $633.11 per VMT the calculation is as follows:

*VMT Banking Fee = 250 employees x 3.224 VMT per employee x $633.11 per VMT = $510,286.66*

The VMT banking fee calculation has been provided in **Table 2**. In case that the VMT Banking Fee Program is not in place, the TDM program will need to achieve the full 15% reduction.

## Table 1 – TDM Measures

| Transportation Demand Management Measure | Description | Max VMT Reduction | Applicant Preferred Measure | VMT Reduction Applied |
|---|---|---|---|---|
| **Parking Strategies** | | | | |
| Reduce Parking Supply | Reduce the number of available parking spots provided to employees. | 1% | | 0% |
| Unbundle Parking | Remove free parking at the site, and charge employees for parking. The higher the cost of parking, the higher the reduction. | 1% | | 0% |
| Parking Cash-out | Provide employees a choice of forgoing current parking for a cash payment to be determined by the employer. The higher the cash payment and eligible employees, the higher the reduction. | 2% | | 0% |
| **Transit Strategies** | | | | |
| Transit Stops | Coordinate with local transit agency to provide bus stop near the site. Real time transportation information displays support on-the-go decision making to support sustainable trip making. | 1% | | 0% |
| Implement Neighborhood Shuttle | Implement project-operated or project-sponsored neighborhood shuttle serving residents, employees, and visitors of the project site | 2% | | 0% |
| Transit Subsidies | Involves the subsidization of transit fare for residents and employees of the project site. This strategy assumes transit service is already present in the project area.<br>Pays for employees to use local transit. This could either be a discounted ticket or a full-reimbursed transit ticket. | 2% | | 0% |
| **Communication & Information Strategies** | | | | |
| Travel Behavior Change Program | Involves the development of a travel behavior change program that targets individuals' attitudes, goals, and travel behaviors, educating participants on the impacts of their travel choices and the opportunities to alter their habits. Provide a web site that allows employees to research other modes of transportation for commuting. Employee-focused travel behavior change program that targets individuals' attitudes, goals, and travel behaviors, educating participants on the impacts of their travel choices and the opportunities to alter their habits. DIBS | 1% | | 0% |
| Promotions & Marketing | Involves the use of marketing and promotional tools to educate and inform travelers about site-specific transportation options and the effects of their travel choices with passive educational and promotional materials. Marketing and public information campaign to promote awareness of TDM program with an on-site coordinator to monitor program. DIBS | 1% | | 0% |
| **Commuting Strategies** | | | | |
| Employer Sponsored Vanpool or Shuttle | Implementation of employer-sponsored employee vanpool or shuttle providing new opportunities for access to connect employees to the project site. | 2% | | 0% |
| Emergency Ride Home (ERH) Program | Provide an occasional subsidized ride to commuters who use alternative modes. Guaranteed ride home for people if they need to go home in the middle of the day due to an emergency or stay late and need a ride at a time when transit service is not available. DIBS | 1% | x | 1% |
| Telecommuting Alternative work schedule | Four-Ten work schedule results in 20% weekly VMT reduction, 10% trip reduction equals 15% VMT reduction | 7% | | 0% |
| On-site Childcare | Provide on-site childcare to remove the need to drive a child to daycare at a separate location. | 1% | | 0% |
| **Shared Mobility Strategies** | | | | |
| Ride Share Program | Increase vehicle occupancy by providing ride-share matching services, designating preferred parking for ride-share participants, designing adequate passenger loading/unloading | 2% | | 0% |

## Table 1 – TDM Measures

| Transportation Demand Management Measure | Description | Max VMT Reduction | Applicant Preferred Measure | VMT Reduction Applied |
|---|---|---|---|---|
| | and waiting areas for ride-share vehicles, and providing a website or message board to connect riders and coordinate rides. Need a point person for the business on-site | | | |
| Employee/Employer Car Share | Implement car sharing to allow people to have on-demand access to a vehicle, as-needed. This may include providing membership to an existing program located within 1/4 mile, contracting with a third-party vendor to extend membership-based service to an area, or implementing a project-specific fleet that supports the residents and employees on -site. | 1% | | 0% |
| | Provide an on-site car vehicle for employees to use for short trips. This allows for employees to run errands or travel for lunch. | 1% | | 0% |
| Designated Parking Spaces for Car Share Vehicles | Reserved car share spaces closer to the building entrance. | 1% | x | 1% |
| **Bicycle Infrastructure Strategies** | | | | |
| Bike Share Program | Participate in a bike share program/On site bike share program | 1% | | 0% |
| Implement/Improve On-street Bicycle Facility | Implement or provides funding for improvements to corridors and crossings for bike networks identified within a one-half mile buffer area of the project boundary, to support safe and comfortable bicycle travel. | 1% | | 0% |
| Include Bike Parking Per City Code | Implement short and long-term bicycle parking to support safe and comfortable bicycle travel by providing parking facilities at destinations | 1% | | 0% |
| Include Secure Bike Parking and Showers | Implement additional end-of-trip bicycle facilities to support safe and comfortable bicycle travel. | 1% | | 0% |
| Bicycle Repair Station / Services | On-site bicycle repair tools and space to use them supports on-going use of bicycles for transportation. | 1% | | 0% |
| **Neighborhood Enhancement Strategies** | | | | |
| Traffic Calming Improvements | Implement traffic calming improvements on streets and intersections throughout and around the project site. | 1% | | 0% |
| Pedestrian Network Improvements | Implement pedestrian network improvements throughout and around the project site that encourages people to walk. | 2% | | 0% |
| **Miscellaneous Strategies** | | | | |
| Virtual Care Strategies for Hospitals | Implement options for virtual care for health services for hospitals. | 2% | | 0% |
| On-Site Affordable Housing | Provide a percentage of on-site affordable housing for employees that is less than 100%. | 1% | | 0% |
| Job Creation Land Use (e.g. Office) | Provide offices or other job creation land use. Applies to housing projects. | 3% | | 0% |

| **Banking Fee $** | **$ 510,286.66** |

**Background Plus Project**

Deficiencies in LOS operations, exacerbated or caused by the project, will either be fully or partially eliminated by implementing the following improvements for Background conditions. Background conditions include Existing plus approved project traffic on the study road network. All improvements listed were also identified in the Cordes Phase 2nd Consistency Analysis (June 2020) except for Intersection #11 which is triggered by the Costco project.

- Intersection #1 - International Parkway & I-205 Westbound Ramps (AM Peak Hour)
  - Restripe westbound off-ramp to provide two left-turn lanes and one shared through/right lane and optimize signal timings per Cordes Ranch Specific Plan Final EIR TRANS-1 mitigation measure.
  - AM intersection operations improve from an LOS F to a LOS A.
- Intersection #3 - International Parkway & Old Schulte Road (AM and PM Peak Hours)
  - Per the *Final Traffic Operations Analysis Report (FTOAR) For the Interstate 580/International Parkway/Patterson Pass Road Interchange in Tracy, CA*, a diverging diamond interchange should be constructed at Intersections #4 & #5. The FTOAR recommended an additional northbound right turn at Intersection #3 and to restripe the existing eastbound outside shared through/right lane to be a dedicated eastbound right turn.
  - Refer to the FTOAR for more information regarding LOS improvements.
- Intersection #4 - International Parkway & I-580 Westbound Ramps (AM and PM Peak Hours)
  - A diverging diamond interchange is in the PSE design phase. The City of Tracy and Caltrans are going through design approvals to have the new interchange constructed in the near term.
  - Refer to the FTOAR for more information regarding LOS improvements.
- Intersection #5 - International Parkway & I-580 Eastbound Ramps (AM and PM Peak Hours)

  - A diverging diamond interchange is in the PSE design phase. The City of Tracy and Caltrans are going through design approvals to have the new interchange constructed in the near term.
  - Refer to the FTOAR for more information regarding LOS improvements.
- Intersection #6 - Hansen Road & Old Schulte Road (AM Peak Hour)
  - Add one additional westbound and eastbound through lane at the intersection to establish a 4-lane facility. Old Schulte Road will remain a 2-lane facility over the Delta-Mendota Canal Bridge.
  - AM intersection operations improve from LOS E to LOS C.
- Intersection #11 – Lammers Road & Old Schulte Road (AM Peak Hour)
  - Provide an overlap phase for the eastbound right turn.
  - AM intersection operations improve from LOS E to LOS D.
- Intersection #12 - Lammers Road & Western Pacific Way (AM Peak Hour)
  - Signalize and construct a northbound right-turn and southbound left-turn lanes plus the median of the future widening.
  - AM intersection operations improve from LOS F to LOS C.
- Intersection #13 - Lammers Road & Valpico Road (AM Peak Hour)
  - Signalize intersection and construct a southbound left-turn lane. It is anticipated that widening to a four-lane roadway will occur from Old Schulte Road to Valpico Road with subsequent intersection improvements.
  - AM intersection operations improve from LOS F to LOS C
- The project shall, at a minimum, provide emergency access to the future Hansen Road. It is anticipated that the property immediately west of the Project site (APN 209-23-025) may develop in the near future and that Hansen Road will be extended to Old Schulte Road.

Table 3 provides a summary of improvements as well as the Costco Obligations for the Background Plus Project Conditions.

**Cumulative Plus Project**

No additional improvements have been identified for Cumulative Conditions, The Project will, however, pay the City TIF fees.

## Table 3 – Costco Obligations (Background Plus Project Conditions)

| Costco Intersection # | Intersection /Location | Peak Hour | Background Plus Project Conditions | | |
|---|---|---|---|---|---|
| | | | Improvement | Recommended Costco Improvement? | Costco Project Obligation |
| 1 | International Pkwy & I-205 WB Ramps | AM | Restripe westbound off-ramp to provide two left-turn lanes and one shared through/right lane and optimize signal timings per Cordes Ranch Specific Plan Final EIR TRANS-1 mitigation measure. | Y | Costco will construct improvements if not already implemented by another development and may collect contributions from future benefitting developments. If improvement is already constructed, Costco shall pay a fair share contribution towards improvements. |
| 3 | International Pkwy & Old Schulte Rd | AM & PM | Per the *Final Traffic Operations Analysis Report (FTOAR) For the Interstate 580/International Parkway/Patterson Pass Road Interchange in Tracy, CA*, a diverging diamond interchange should be constructed at Intersections #4 & #5. The FTOAR recommended an additional northbound right turn at Intersection #3 and to restripe the existing eastbound outside shared through/right lane to be a dedicated eastbound right turn. | Y | Costco will construct improvements if not already implemented by another development and may collect contributions from future benefitting developments. If improvement is already constructed, Costco shall pay a fair share contribution towards improvements. |
| 4 | International Pkwy & I-580 WB | AM & PM | A diverging diamond interchange is in the PSE design phase. The City of Tracy and Caltrans are going through design approvals to have the new interchange constructed in the near term. | Impact Fees | Pay TIF |
| 5 | International Pkwy & I-580 EB | AM & PM | A diverging diamond interchange is in the PSE design phase. The City of Tracy and Caltrans are going through design approvals to have the new interchange constructed in the near term. | Impact Fees | Pay TIF |
| 6[1] | Hansen Road & Old Schulte Rd | AM | Add one additional westbound and eastbound through lane at the intersection to establish a 4-lane facility. Old Schulte Road will remain a 2-lane facility over the Delta-Mendota Canal Bridge. | Y | Costco to implement |
| 11 | Lammers Rd & Old Schulte Rd | AM | Provide an overlap phase for the eastbound right turn. | Y | Costco to implement |
| 12[1] | Lammers Rd & Western Pacific Way | AM | Signalize and construct a northbound right-turn and southbound left-turn lanes plus the median of the future widening. | Y | Costco will construct improvements if not already implemented by another development and may collect contributions from future benefitting developments. If improvement is already constructed, Costco may pay a fair share contribution towards improvements. |
| 13 | Lammers Rd & Valpico Rd | AM | Signalize intersection and construct a southbound left-turn lane. It is anticipated that widening to a four-lane roadway will occur from Old Schulte Road to Valpico Road with subsequent intersection improvements. | Y | Costco will construct improvements if not already implemented by another development and may collect contributions from future benefitting developments. If improvement is already constructed, Costco may pay a fair share contribution towards improvements. |

Notes:

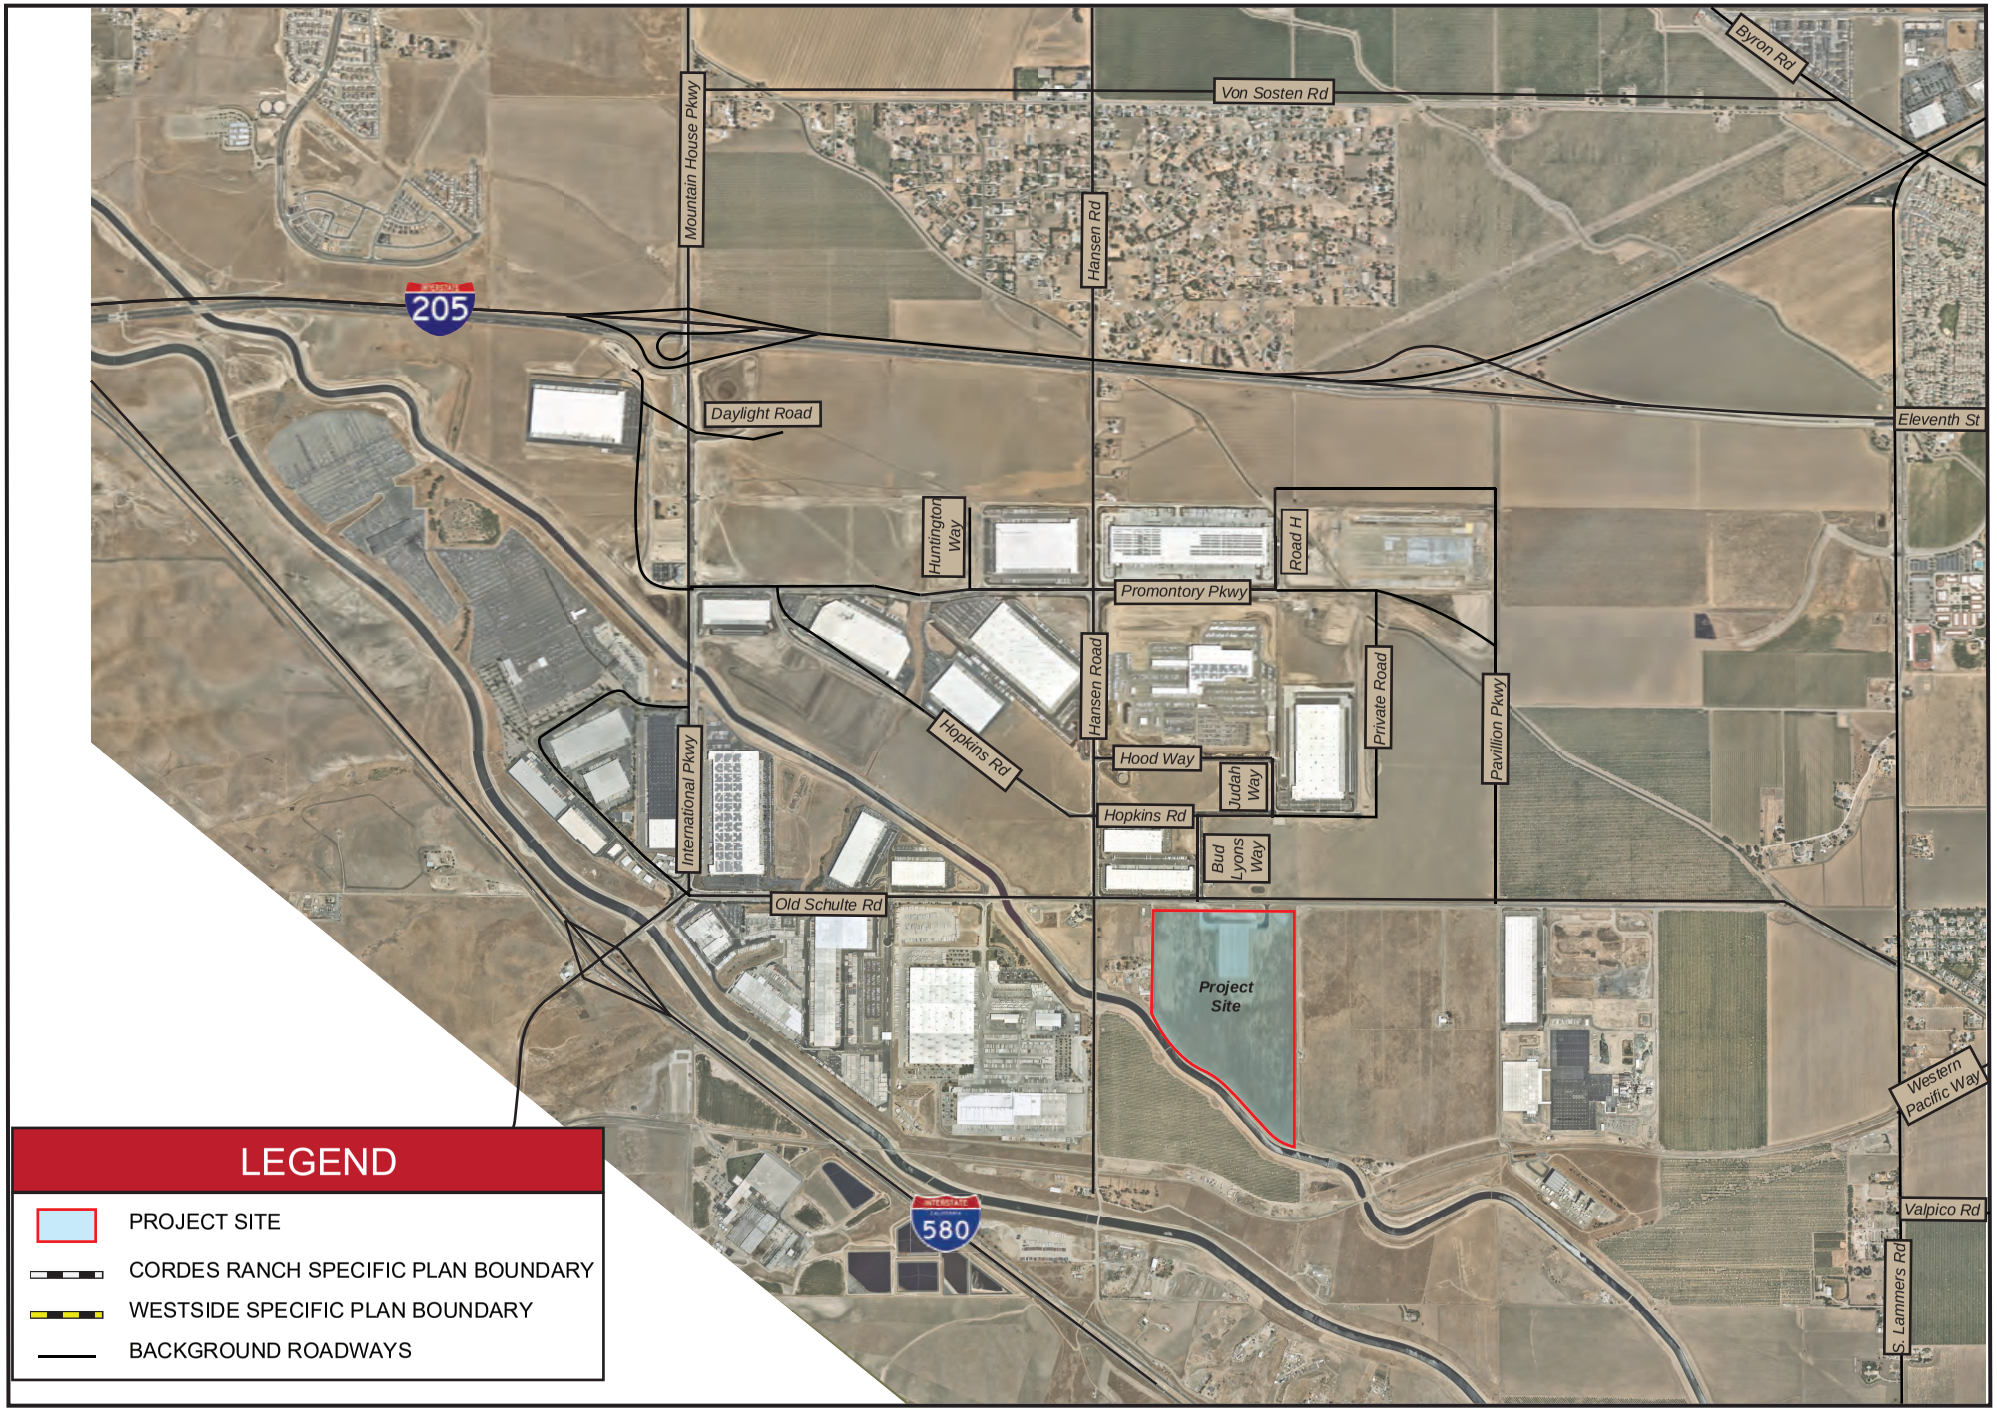
1. Costco will construct improvement if not already implemented by another development. This improvement is anticipated to be included in the City of Tracy Transportation Master Plan (TMP) Fee Program Update. If included, Costco could receive reimbursement for improvements within the fee program.
2. Kimley-Horn traffic study identified TIF, this is not reflected in the conditions.

*Engineering Review*

**Table 4** provides the summary of the engineering comments for the Project.

**Table 4 – Engineering Review Summary**

| Section | Recommendations/Comments |
|---|---|
| Driveway Access Review | • Driveway #1 - Revise striping to the following: 1 left turn and 1 through/right turn lane.<br>• Driveway #2 - Provide Stop (R1-1), Right Turn Only (R3-5R), and One Way (R6-1) signage.<br>• Driveway #3 - A left turn lane and a right turn pocket are needed for the signal.<br>• Emergency vehicle access(es) may be required off Hansen Road. |
| Internal Circulation Review | • Approximately 100 feet is provided between Old Schulte Road and the internal drive aisle. This is only enough space for 4 passenger car vehicles or 1 STAA and 1 passenger car vehicle per lane. Since this is the only location where a passenger car can perform a left turn out of the site, this is not adequate during the shift change peaks. To alleviate congestion at this point, it is recommended to provide an eastbound U-turn lane (that could potentially convert to a future left turn lane) at the Old Schulte Road and Project Driveway #3 signalized intersection.<br>• At Project Driveway #1, the northern internal crosswalk should be removed as this will conflict with vehicles entering and exiting the Project. This crossing should occur at the signal instead or at the southern internal crosswalk.<br>• Provide a three way stop at the Project Driveway #1 internal intersection with the inbound movement as the free movement.<br>• No project detail is known for the eastern adjacent parcel that will share Project Driveway #3. The cross access shown will be reviewed in the future, once a development application is submitted for the adjacent parcel.<br>• Provide clear signage and/or pavement markings for trucks entering Project Driveway #3 that designates security versus bypass lanes.<br>• Provide truck turning templates at reverse curve within Project Driveway #3. |
| Vehicle Turning Templates | • STAA trucks are unable to perform northbound right turn at Driveways #1. Design modifications to the proposed curb are required to allow STAA trucks to perform necessary movements to access the site.<br>• STAA trucks are unable to perform eastbound and northbound right turns at Driveways #3. Design modifications to the proposed curb are required to allow STAA trucks to perform necessary movements to access the site.<br>• A westbound left turn must be provided at Driveway #3 and it must accommodate a STAA truck turning template. |
| External Network Review | • Provide more detail on the transitions between existing conditions on both the east and west end of the Project limits.<br>• Provide the striping at the intersection of Old Schulte Road and Project Driveway #3. This approach must include a westbound left turn pocket that can accommodate a CA-STAA truck.<br>• Revise the signing and striping for the southbound movement at Old Schulte Road and Bud Lyons Way. Provide one left turn and one through/right lane.<br>• The Westbound right turn lane at the intersection of Old Schulte Road and Bud Lyons is existing and should be shown on the plan set.<br>• Provide eastbound shoulder stripe.<br>• Lengthen the westbound left turn lane at Project Driveway #1 to accommodate 375 feet of deceleration and 150 feet of storage.<br>• Emergency vehicles access(es) may be required off Hansen Road. In addition, the City typically requires all street frontage improvements to be constructed by the Project developer. |



## 2. Introduction

This memorandum presents a traffic review of the Costco Direct Delivery Center (Project) located south of Old Schulte Road (West Schulte Road) and north of the proposed Hansen Road Extension in Tracy, California. The Project consists of two warehouse buildings:

- Building 1: 543,326 Square Feet
- Building 2: 1,201,727 Square Feet
- Total: 1,745,053 Square Feet

**Figure 1** provides a Project vicinity map. The Project is located on agricultural land in the City of Tracy Sphere of Influence. Adjacent development includes industrial uses in the County of San Joaquin and Cordes Ranch. Regional access to the site is via I-205 and I-580 via the Mountain House and Patterson Pass interchanges, respectively. Additional industrial development is also occurring to the east of the Project site, and the future Westside Specific Plan area is located to the northeast of the site. The Project will be annexed into the City.

The Project site plan is shown in **Figure 2**. The Project proposes three access points along Old Schulte Road (two signals and one right-in, right-out) and none along the future Hansen Road.

## 3. VMT Analysis

*VMT Calculations*

In 2018, the California state legislature, in approving Senate Bill (SB) 743, directed the Office of Planning and Research to develop guidelines for assessing transportation impacts based on vehicle miles traveled, or VMT. In response to SB 743, CEQA and its implementing guidelines (CEQA Guidelines) were significantly amended regarding the methods by which lead agencies are to evaluate a project's transportation impacts. As described in CEQA Guidelines Section 15064.3(a):

*Generally, vehicle miles traveled is the most appropriate measure of transportation impacts. For the purposes of this section, "vehicle miles traveled" refers to the amount and distance of automobile travel attributable to a project. Other relevant considerations may include the effects of the project on transit and non-motorized travel. Except as provided in subdivision (b)(2) below (regarding roadway capacity), a project's effect on automobile delay shall not constitute a significant environmental impact.*

This section of the Guidelines continues to set forth the criteria for analyzing transportation impacts. Currently, the City is studying their own thresholds, but none have been adopted.

In 2013, SB 743 was signed into law by California Governor Jerry Brown with a goal of reducing Greenhouse Gas (GHG) emissions, promoting the development of infill land use projects and multimodal transportation networks, and to promote a diversity of land uses within developments. One significant outcome resulting from this statue is the removal of automobile delay and congestion, commonly known as Level of Service (LOS), as a basis for determining significant transportation impacts under the California Environmental Quality Act (CEQA).

The Governor's Office of Planning and Research (OPR) has documented recommended analysis guidelines for SB 743 in its *Technical Advisory on Evaluating Transportation Impacts in CEQA* (2018) which provides for Vehicle Miles Traveled (VMT) as the principal measure to replace LOS for determining significant transportation impacts. VMT is a measure of total vehicular travel that accounts for the number of vehicle trips and the length of those trips. OPR selected VMT, in part, because jurisdictions are already familiar with this metric. VMT is already used in CEQA to study other potential impacts such as Greenhouse Gases (GHG), air quality, and energy impacts and is used in planning for regional Sustainable Communities Strategies (SCS).

VMT also allows for an analysis of a project's impact throughout the City rather than only in the vicinity of the proposed project, allowing for a better understanding of the full extent of a project's transportation-related impact. It should be noted that SB 743 still allows the City of Tracy to use LOS for other planning purposes outside the scope of CEQA.

Understanding how the local roadway network functions from an engineering standpoint is still critical to local land use agencies to monitor traffic flow, identify safety issues, establish fees and manage congestion. However, for the purposes of evaluating environmental impacts under CEQA, the new regulations have removed congestion from the range of required subjects analyzed within CEQA documents.

The proposed Costco Direct Delivery Center project was evaluated using the City of Tracy VMT Calculator. For the surrounding industrial land use area, the City's threshold is 9.4 VMT per Employee. The evaluation

tool estimates that the Project would generate 24.8 VMT per Employee, and the Project exceeds the threshold by 164%.

Per the City's VMT threshold and SB 743 guidelines, the Project causes a significant transportation impact. For projects that would cause a VMT impact, VMT reduction strategies such as introducing transportation demand management (TDM), or additional multimodal infrastructure can be implemented to reasonably mitigate the VMT impact which is estimated from research literature and case studies.

*Potential Mitigations*

The Project exceeds the City threshold by 164% and this reduction is not feasible. The California Air Pollution Control Officers Association (CAPCOA) indicates that up to 15% of VMT reduction can reasonably be achieved. The Project has the option to "purchase" additional VMT from the VMT banking fee above 15%. For the purpose of this report, a maximum of 15% is assumed.

**TDM Program**

This program recommends TDM measures that would individually reduce the Project's VMT and trips with the goal of obtaining a feasible maximum of 15% VMT reduction. **Table 5** lists the toolbox of potential TDM measures that could partially mitigate the Project's VMT impact. Maximum TDM reductions are provided for each TDM element. The applicant will select specific TDM measures in consultation with the City to partially mitigate the VMT impact.

This TDM program aims to achieve a feasible maximum of 15% VMT reduction, with the opportunity for 13% VMT reduction coming from the VMT Banking Fee Program as discussed after this section. In the case that the VMT Banking Fee is not in place, the TDM program will need to achieve the full 15% reduction.

For the TDM program, the following TDM measures are being proposed:

1. Commuting Strategies– 1%
    a. Emergency Ride Home (ERH) Program: The Project will provide an occansional subsidized ride to commuters who use alternative modes. Guaranteed ride home for people if they need to go home in the middle of the day due to an emergency or stay late and need a ride at a time when transit service is not available.
2. Shared Mobility Strategies – 1%
    a. Designated Parking for Car Share Vehicles: The Project will provide preferential parking in convient locations in terms of free or reduced parking fees, priority parking, or reserved parking for commuters who carpool, vanpool, ride-share, or use alternatively fueled vehicles.

**VMT Banking Fees**

The City of Tracy VMT Banking Fee Program is a programmatic approach to respond to the need for feasible VMT mitigation programs. Programmatic approaches that rely on collectively funding larger projects allow a project to obtain an amount of mitigation commensurate with their impact, include only a single payment without the complexity of ongoing management, and do not require on-going mitigation monitoring. Programmatic approaches can also provide a public benefit in terms of funding transportation

improvements that would not otherwise be constructed, resulting in improvements to congestion, GHG emissions, increased transportation choices, and additional opportunities for active transportation.

The VMT Banking Fee Program calculates the cost per VMT reduction as $633.11. Therefore, to achieve a the 13% reduction needed after implementation of the TDM program, the project would be responsible to pay $510,286.66. This is calculated as 13% being equivalent to a 3.224 VMT per employee reduction. Since there are 250 employees and each employee pneeds to reduce by 3.224 VMT at a cost of $633.11 per VMT the calculation is as follows:

*VMT Banking Fee = 250 employees x 3.224 VMT per employee x $633.11 per VMT = $510,286.66*

The VMT banking fee calculation has been provided in **Table 6**.

**Table 5 – TDM Measures**

| Transportation Demand Management Measure | Description | Max VMT Reduction | Applicant Preferred Measure | VMT Reduction Applied |
|---|---|---|---|---|
| **Parking Strategies** | | | | |
| Reduce Parking Supply | Reduce the number of available parking spots provided to employees. | 1% | | 0% |
| Unbundle Parking | Remove free parking at the site, and charge employees for parking. The higher the cost of parking, the higher the reduction. | 1% | | 0% |
| Parking Cash-out | Provide employees a choice of forgoing current parking for a cash payment to be determined by the employer. The higher the cash payment and eligible employees, the higher the reduction. | 2% | | 0% |
| **Transit Strategies Strategies** | | | | |
| Transit Stops | Coordinate with local transit agency to provide bus stop near the site. Real time transportation information displays support on-the-go decision making to support sustainable trip making. | 1% | | 0% |
| Implement Neighborhood Shuttle | Implement project-operated or project-sponsored neighborhood shuttle serving residents, employees, and visitors of the project site | 2% | | 0% |
| Transit Subsidies | Involves the subsidization of transit fare for residents and employees of the project site. This strategy assumes transit service is already present in the project area.<br>Pays for employees to use local transit. This could either be a discounted ticket or a full-reimbursed transit ticket. | 2% | | 0% |
| **Communication & Information Strategies** | | | | |
| Travel Behavior Change Program | Involves the development of a travel behavior change program that targets individuals' attitudes, goals, and travel behaviors, educating participants on the impacts of their travel choices and the opportunities to alter their habits. Provide a web site that allows employees to research other modes of transportation for commuting. Employee-focused travel behavior change program that targets individuals' attitudes, goals, and travel behaviors, educating participants on the impacts of their travel choices and the opportunities to alter their habits. DIBS | 1% | | 0% |
| Promotions & Marketing | Involves the use of marketing and promotional tools to educate and inform travelers about site-specific transportation options and the effects of their travel choices with passive educational and promotional materials. Marketing and public information campaign to promote awareness of TDM program with an on-site coordinator to monitor program. DIBS | 1% | | 0% |
| **Commuting Strategies** | | | | |
| Employer Sponsored Vanpool or Shuttle | Implementation of employer-sponsored employee vanpool or shuttle providing new opportunities for access to connect employees to the project site. | 2% | | 0% |

## Table 5 – TDM Measures

| Transportation Demand Management Measure | Description | Max VMT Reduction | Applicant Preferred Measure | VMT Reduction Applied |
|---|---|---|---|---|
| Emergency Ride Home (ERH) Program | Provide an occasional subsidized ride to commuters who use alternative modes. Guaranteed ride home for people if they need to go home in the middle of the day due to an emergency or stay late and need a ride at a time when transit service is not available. DIBS | 1% | x | 1% |
| Telecommuting Alternative work schedule | Four-Ten work schedule results in 20% weekly VMT reduction, 10% trip reduction equals 15% VMT reduction | 7% | | 0% |
| On-site Childcare | Provide on-site childcare to remove the need to drive a child to daycare at a separate location. | 1% | | 0% |
| **Shared Mobility Strategies** | | | | |
| Ride Share Program | Increase vehicle occupancy by providing ride-share matching services, designating preferred parking for ride-share participants, designing adequate passenger loading/unloading and waiting areas for ride-share vehicles, and providing a website or message board to connect riders and coordinate rides. Need a point person for the business on-site | 2% | | 0% |
| Employee/Employer Car Share | Implement car sharing to allow people to have on-demand access to a vehicle, as-needed. This may include providing membership to an existing program located within 1/4 mile, contracting with a third-party vendor to extend membership-based service to an area, or implementing a project-specific fleet that supports the residents and employees on -site. | 1% | | 0% |
| | Provide an on-site car vehicle for employees to use for short trips. This allows for employees to run errands or travel for lunch. | 1% | | 0% |
| Designated Parking Spaces for Car Share Vehicles | Reserved car share spaces closer to the building entrance. | 1% | x | 1% |
| **Bicycle Infrastructure Strategies** | | | | |
| Bike Share Program | Participate in a bike share program/On site bike share program | 1% | | 0% |
| Implement/Improve On-street Bicycle Facility | Implement or provides funding for improvements to corridors and crossings for bike networks identified within a one-half mile buffer area of the project boundary, to support safe and comfortable bicycle travel. | 1% | | 0% |
| Include Bike Parking Per City Code | Implement short and long-term bicycle parking to support safe and comfortable bicycle travel by providing parking facilities at destinations | 1% | | 0% |
| Include Secure Bike Parking and Showers | Implement additional end-of-trip bicycle facilities to support safe and comfortable bicycle travel. | 1% | | 0% |
| Bicycle Repair Station / Services | On-site bicycle repair tools and space to use them supports on-going use of bicycles for transportation. | 1% | | 0% |
| **Neighborhood Enhancement Strategies** | | | | |
| Traffic Calming Improvements | Implement traffic calming improvements on streets and intersections throughout and around the project site. | 1% | | 0% |
| Pedestrian Network Improvements | Implement pedestrian network improvements throughout and around the project site that encourages people to walk. | 2% | | 0% |
| **Miscellaneous Strategies** | | | | |
| Virtual Care Strategies for Hospitals | Implement options for virtual care for health services for hospitals. | 2% | | 0% |
| On-Site Affordable Housing | Provide a percentage of on-site affordable housing for employees that is less than 100%. | 1% | | 0% |
| Job Creation Land Use (e.g. Office) | Provide offices or other job creation land use. Applies to housing projects. | 3% | | 0% |

**Table 6 – VMT Banking Fees Calculations**

| | |
|---|---|
| Project Building Area (ksf) | 1,745.1 |
| Employees per ksf | |
| Project Employees | 250 |
| Project VMT/EMP | 24.8 |
| Project Total Employee VMT | 6,200.0 |
| Project VMT/EMP Difference | 164% |
| TDM % | 2% |
| Banking Fee % | 13% |
| Project Total Employee VMT Reduction for Fee Calculation | 806.0 |
| Project Total Employee VMT/EMP Reduction for Fee Calculation | 3.224 |
| **Banking Fee $** | **$ 510,286.66** |

## 4. Analysis Methodology

*Study Intersections*

The following intersections were analyzed for this study:

1. International Pkwy & I-205 WB Ramps
2. International Pkwy & I-205 EB Ramps
3. International Pkwy & Old Schulte Rd
4. International Pkwy & I-580 WB Ramps
5. International Pkwy & I-580 EB Ramps
6. Hansen Rd & Old Schulte Rd
7. Bud Lyons Wy/Project Driveway #1 & Old Schulte Rd
8. Project Driveway #2 & Old Schulte Rd
9. Project Driveway #3 & Old Schulte Rd
10. Pavillion Pkwy & Old Schulte Rd
11. Lammers Rd & Old Schulte Rd
12. Lammers Rd & Western Pacific Wy
13. Lammers Rd & Valpico Rd

These intersections were selected based on the City threshold established in the City of Tracy Transportation Master Plan and the General Plan. The intersection analysis will not be used for CEQA purposes but only for conditions of approval for implementing engineering improvements.

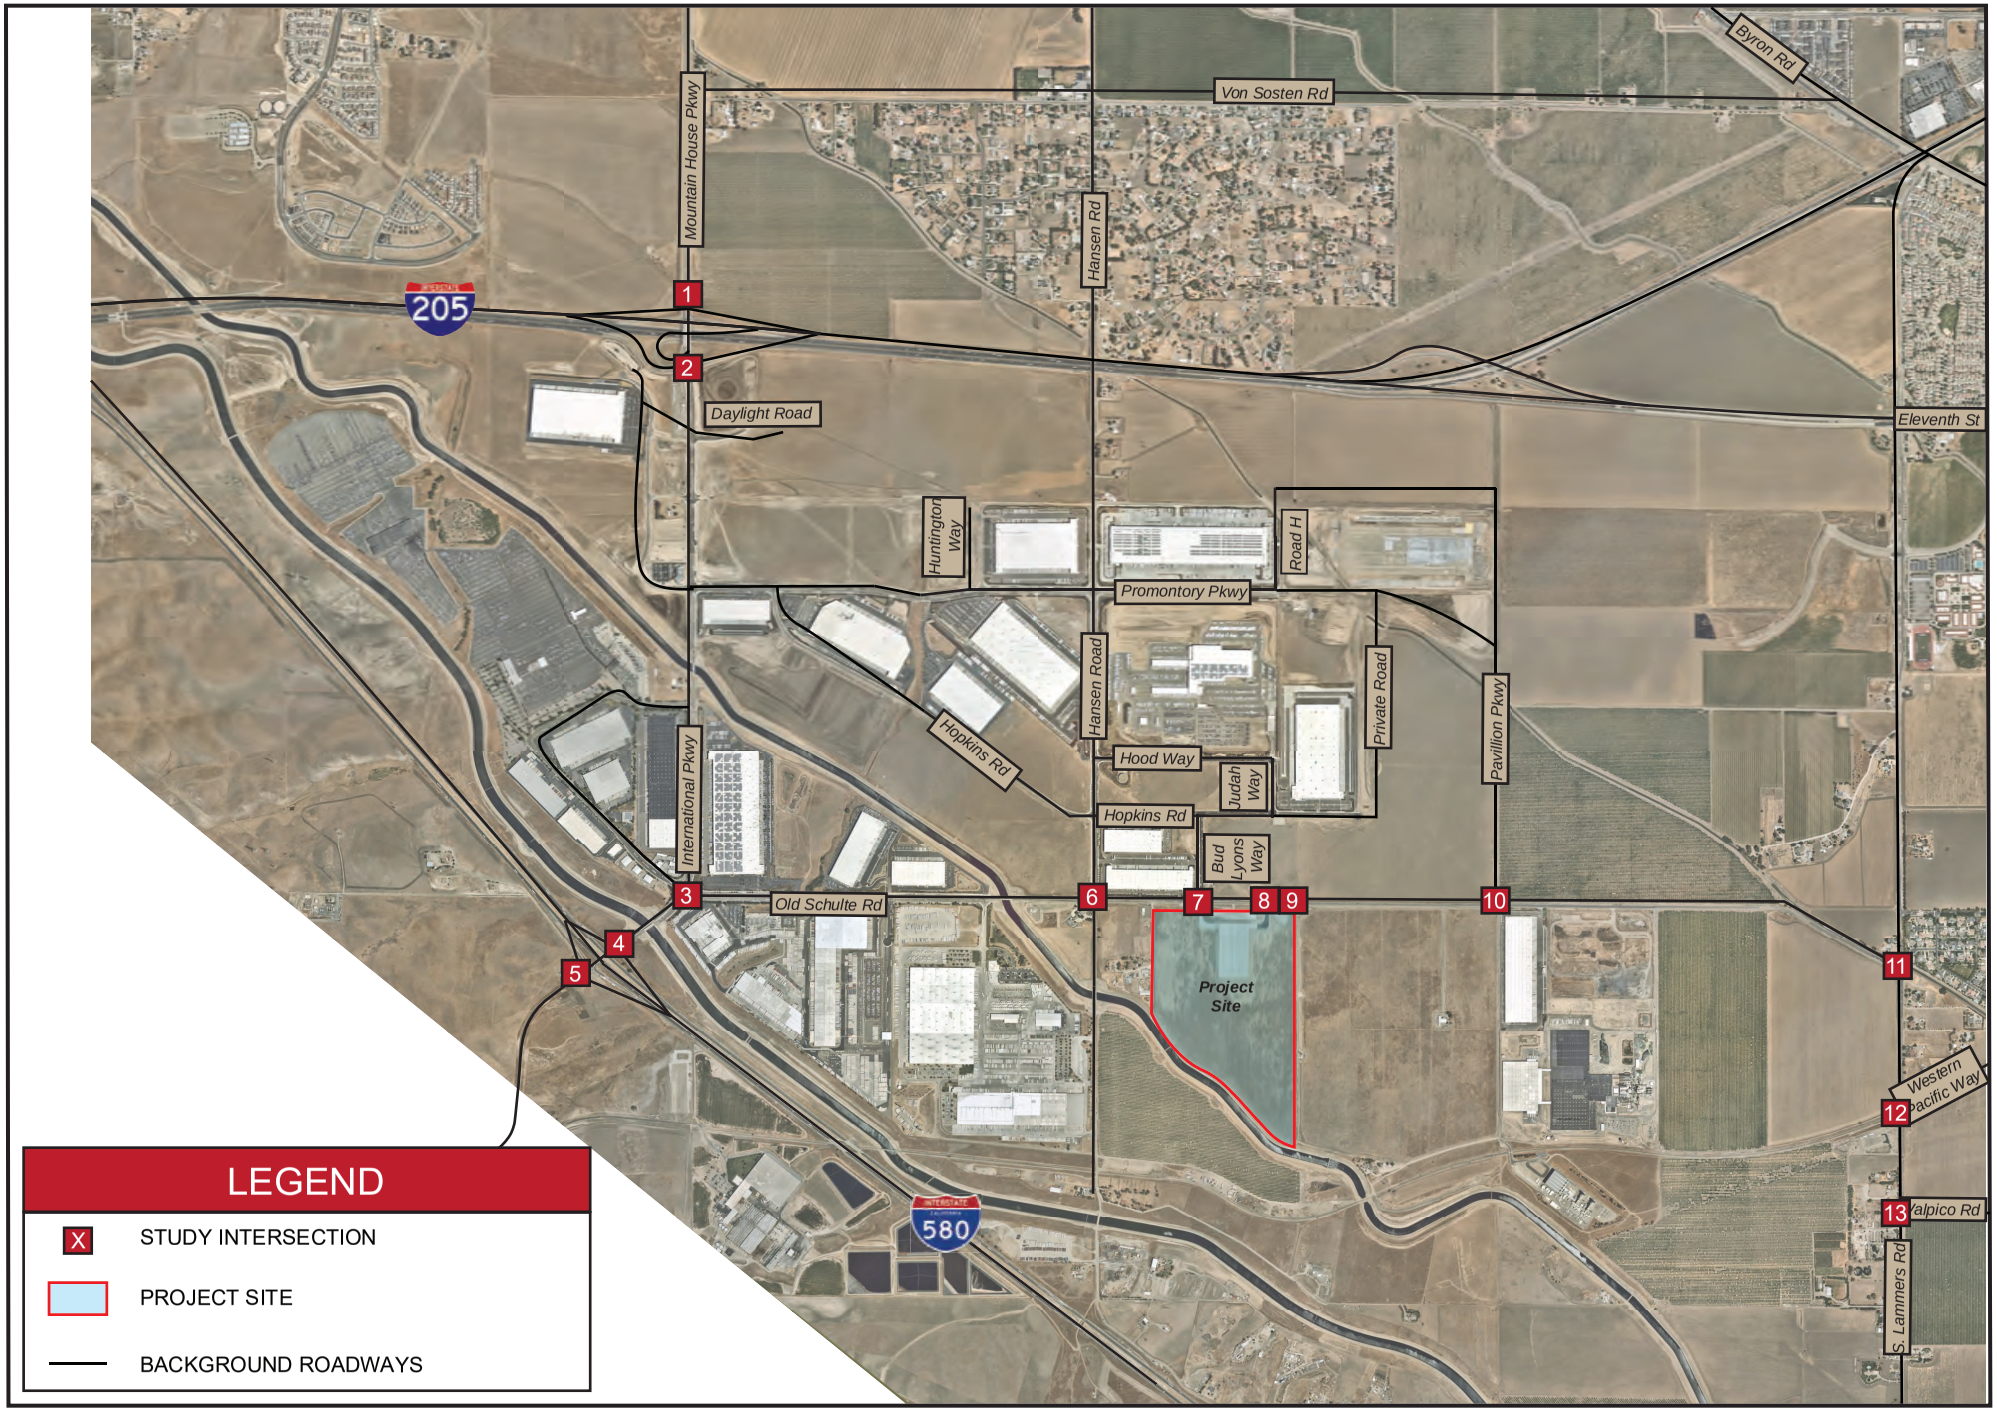
*Study Conditions*

The following scenarios were analyzed to determine if the Project causes study intersections to degrade to an unacceptable level of service (LOS):

- **Background Conditions** – represents the following:
    - Existing traffic counts
        - May 2019 traffic counts

        - One supplemental count at Old Schulte Road and Bud Lyons Way was collected on November 19, 2020 from 5:00 AM to 8:00 AM and 3:00 PM to 6:00 PM while the COVID-19 pandemic and associated shelter in place restrictions were in effect. The industrial facilities near the count location were operational and counts were reviewed against pre-pandemic volumes and deemed acceptable to use for this study.
    - Plus Approved but unconstructed projects' traffic volumes
        - Cordes Ranch Scheme 170A Transportation Impact Analysis dated November 1, 2017
        - Cordes Ranch 2nd Consistency Analysis (Phase 1K) Traffic Study Memorandum dated June 30, 2020
- **Background Plus Project Conditions** – represents Background Conditions plus traffic generated by the proposed Project
- **Cumulative Conditions** – represents the following:
    - Future 2035 volumes derived from the City of Tracy Travel Demand Model, excluding the Project site traffic
    - Plus Project trips from the Cordes Ranch 2nd Consistency Analysis (Phase 1K) Traffic Study Memorandum dated June 30th, 2020
- **Cumulative Plus Project Conditions** – represents Cumulative Conditions along with traffic generated by the proposed Project

## 5. Background Conditions



Background Conditions are based on Existing Conditions traffic volumes plus traffic generated by approved but unconstructed projects. Background Conditions also assumed an updated roadway network reflecting the Cordes Ranch Phase 1K street improvement plan.

The Background Conditions roadway network is shown in **Figure 3**. The Background Conditions lane geometry is shown in **Figure 4** and traffic volumes are shown in **Figure 5**.

Results of the Background Conditions level of service analysis are presented in **Table 7**. All intersections operated at acceptable levels of service except for the following:

- Intersection #1 - International Pkwy & I-205 WB Ramps (AM Peak Hour)
- Intersection #3 - International Pkwy & Old Schulte Rd (AM and PM Peak Hours)
- Intersection #4 - International Pkwy & I-580 WB Ramps (AM and PM Peak Hours)
- Intersection #5 - International Pkwy & I-580 EB Ramps (AM and PM Peak Hours)
- Intersection #6 - Hansen Rd & Old Schulte Rd (AM Peak Hour)
- Intersection #7 - Bud Lyons Wy/Project Driveway #1 & Old Schulte Rd (AM Peak Hour)
- Intersection #10 - Pavillion Pkwy & Old Schulte Rd (AM Peak Hour)
- Intersection #12 - Lammers Rd & Western Pacific Wy (AM Peak Hour)
- Intersection #13 - Lammers Rd & Valpico Rd (AM Peak Hour)

Analysis output sheets for Background Conditions are provided in the **Appendix**.

Note:

1 Analysis performed using HCM 6 methodologies

2 Delay indicated in seconds/vehicle

3 Caltrans level of service (LOS) standard is C/D. City of Tracy LOS standard is D except that LOS E acceptable within 1/4-mile of freeway interchanges (#3).

4 Intersections that fall below Caltrans or City standards are shaded and shown in **bold**.

5 AWSC = All-Way Stop Control, TWCS = Two-Way Stop Control, Signal = Signal Control

## 6. Trip Generation, Distribution, and Assignment

*Trip Generation*

Trip generation for the proposed Costco development was calculated using the E-Commerce trip generation rates provided by Kittleson's *Tracy Costco Depot Transportation Impact Analysis Report* (August 28, 2017). These rates were then split into passenger car and truck trips based on ITE guidance for high-cube and warehousing facilities. These rates were compared against the City trip rates and ITE trip rates. The e-commerce rates from Costco are higher than the City and ITE trip rates.

The proposed Project is anticipated to generate 401 AM peak hour (377 IN / 24 OUT) and 87 PM peak hour (19 IN / 68 OUT) gross trips.

**Table 8 - Trip Generation**

| Land Uses | Project Size | AM PEAK HOUR | | | | PM PEAK HOUR | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | Total Peak Hour | IN | / | OUT | Total Peak Hour | IN | / | OUT |
| **Trip Generation Rates** | | | | | | | | | |
| **Project Use** | | | | | | | | | |
| Costco E-commerce Warehouse[1] | - KSF | 0.23 | 94% | / | 6% | 0.05 | 21% | / | 79% |
| **Trips Generated** | | | | | | | | | |
| **Building 1** | **543.326 KSF** | **125** | **118** | **/** | **7** | **27** | **6** | **/** | **21** |

***NOTES***

1. Trip generation provided by Kittleson's *Tracy Costco Depot Transportation Impact Analysis Report* (August 28, 2017).

2. ITE's *High-Cube Warehouse Vehicle Trip Generation Analysis*, 2016. The percentage of passenger car vehicles for Short-Term Storage, Transload, & Cold Storage is the following:
Daily: 67.8%
AM: 69.2%
PM: 78.3%

*Trip Distribution and Assignment*

**Project Background Conditions**

Trips were distributed along the roadway network based on the Cordes Ranch EIR. The following provides the passenger car distribution for Project Background Conditions:

- 23% to/from the east along I-580
- 3% to/from the west along I-580
- 2% to/from the west along I-205

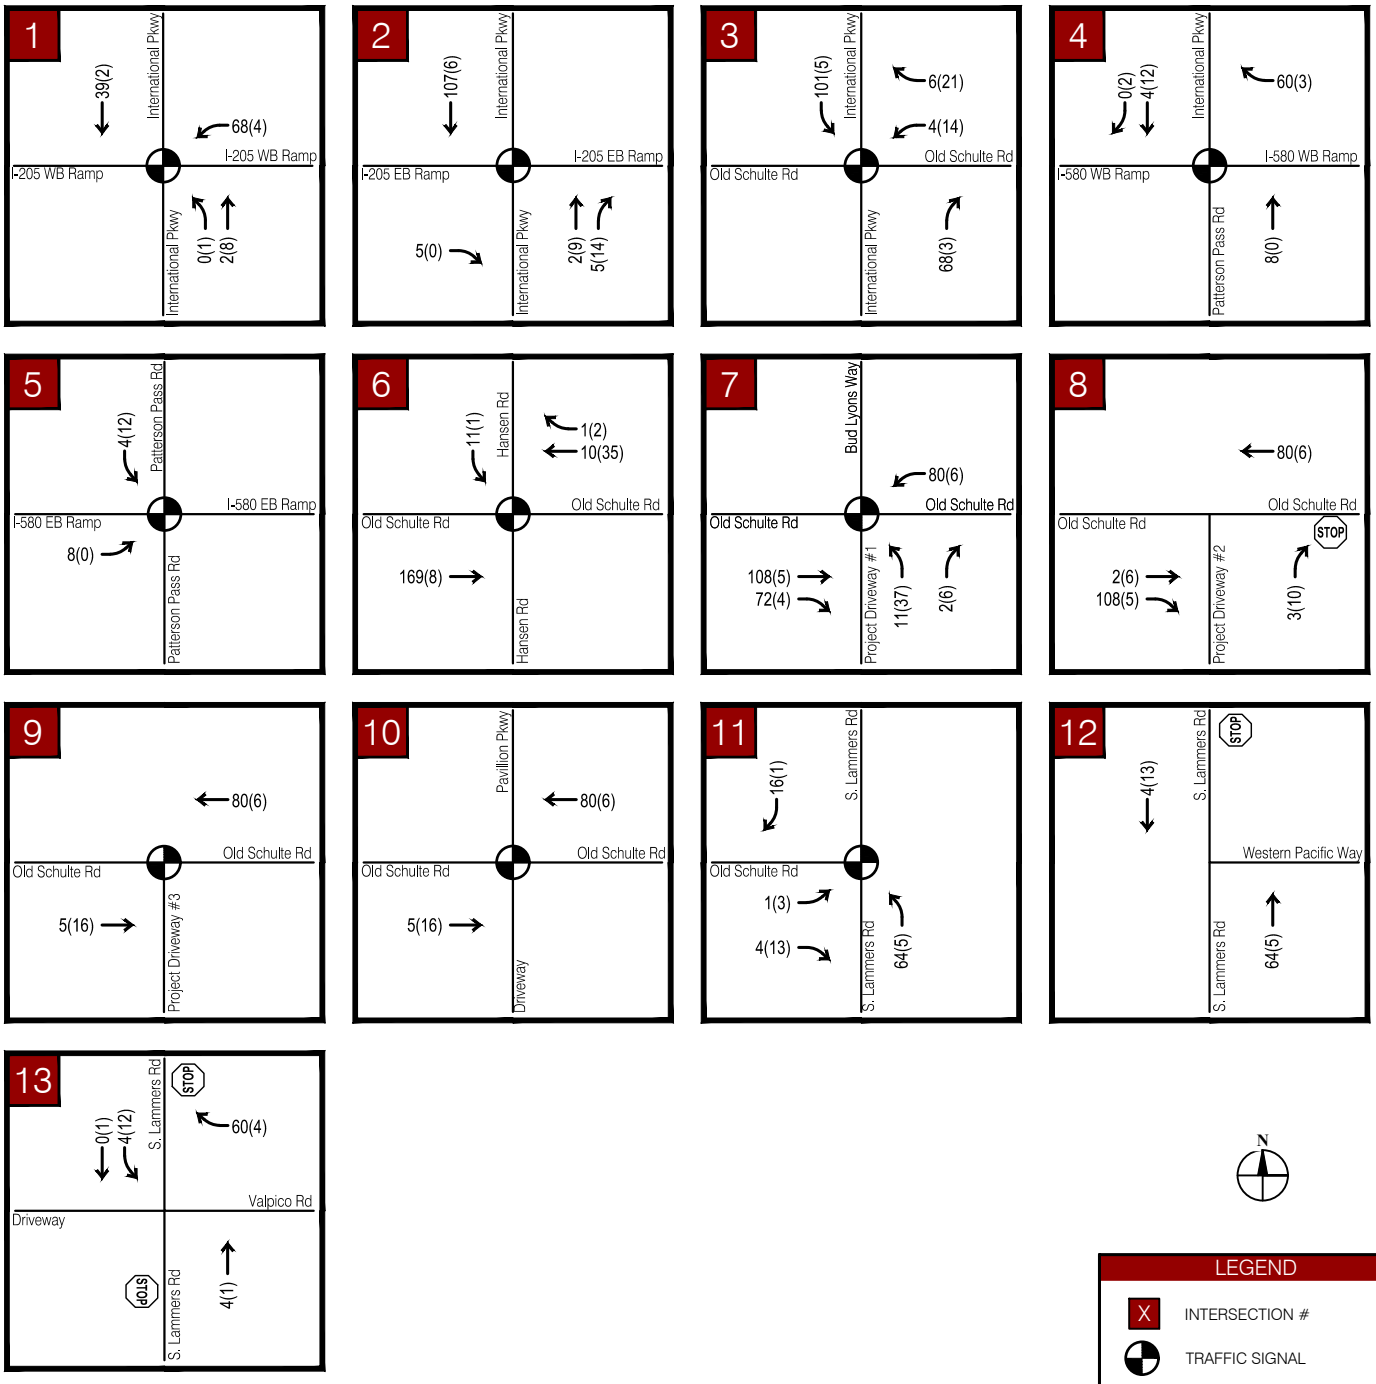
- 15% to/from the north along Mountain House Parkway
- 26% to/from the east along I-205
- 6% to/from the north along Lammers Road
- 23% to/from the east along Valpico Road
- 2% to/from the south along Lammers Road

The following provides the assumed truck distribution that was provided by Kittelson:

- 37% to/from the east along I-580
- 19% to/from the west along I-580
- 11% to/from the west along I-205
- 33% to/from the east along I-205

Refer to **Figure 6** and **Figure 7** for the Project Background Conditions passenger car trip distribution and assignment, respectively. Refer to **Figure 8** and **Figure 9** for the Project Background Conditions truck trip distribution and assignment, respectively.

**Project Cumulative Conditions**



The following provides the passenger car distribution derived from the City's 2035 travel demand model for Project Cumulative Conditions:

- 12% to/from the east along I-580
- 3% to/from the west along I-580
- 2% to/from the west along I-205
- 15% to/from the north along Mountain House Parkway
- 26% to/from the east along I-205
- 10% to/from the north along Lammers Road
- 10% to/from the east along Promontory Parkway
- 9% to/from the east along Valpico Road
- 6% to/from the south along Lammers Road
- 7% to/from the east along Hansen Road

The assumed truck distribution remained the same between Project Background and Project Cumulative Conditions. Refer to **Figure 10** and **Figure 11** for the Project Cumulative Conditions passenger car trip distribution and assignment, respectively. Refer to **Figure 12** and **Figure 13** for the Project Cumulative Conditions truck trip distribution and assignment, respectively. Trips for the Project Cumulative Conditions are based on the trip generation provided in **Table 8**.

## 7. Background Plus Project Conditions

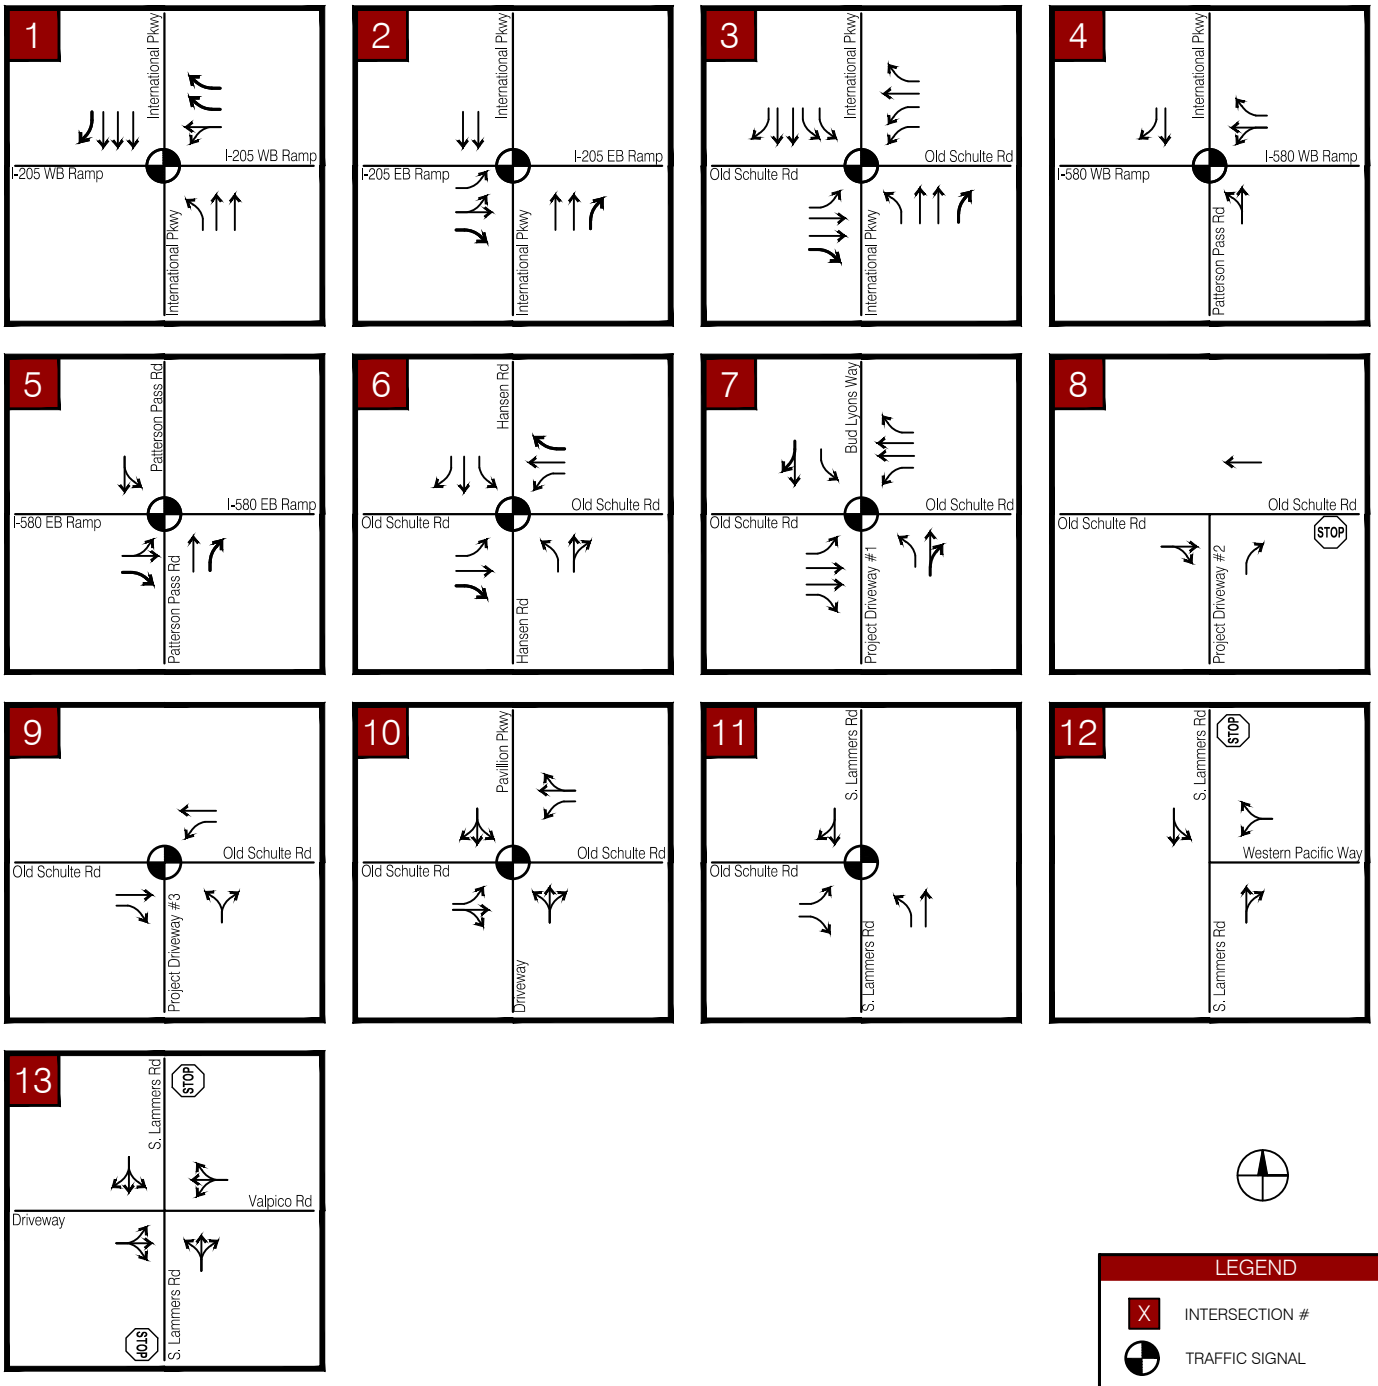
Background Plus Project Conditions are based on Background Conditions traffic volumes plus traffic generated by the proposed Project. The roadway network is based on Background Conditions plus improvements anticipated to be constructed by the Project:

- Widen Old Schulte Road to four through lanes along the Project's frontage
- Add south leg and eastbound right turn lane and westbound left turn lane at Project Driveway #1
- Add new signalized intersection, eastbound right turn lane and westbound left turn lane at Project Driveway #3

The Background Plus Project Conditions roadway network is shown in **Figure 14** and the volumes are shown in **Figure 15**.

Results of the Background Plus Project Conditions levels of service analysis are presented in **Table 9**. Travel patterns on Old Schulte Road are peak period based (i.e. westbound in the morning and eastbound in the evening). The Project primarily adds traffic in the opposing, non-peak, direction during the peak periods. The following intersections operated at unacceptable levels of service and recommended improvements have been provided:

- Intersection #1 - International Pkwy & I-205 WB Ramps (AM Peak Hour)
    - Restripe westbound off-ramp to provide two left-turn lanes and one shared through/right lane and optimize signal timings per Cordes Ranch Specific Plan Final EIR TRANS-1 mitigation measure.
- Intersection #3 - International Pkwy & Old Schulte Rd (AM and PM Peak Hours)
    - Per the *Final Traffic Operations Analysis Report (FTOAR) For the Interstate 580/International Parkway/Patterson Pass Road Interchange in Tracy, CA*, a diverging diamond interchange should be constructed at Intersections #4 & #5. The FTOAR recommended an additional northbound right turn at Intersection #3 and to restripe the existing eastbound outside shared through/right lane to be a dedicated eastbound right turn.
- Intersection #4 - International Pkwy & I-580 WB Ramps (AM and PM Peak Hours)
    - A diverging diamond interchange is in the PSE design phase. The City of Tracy and Caltrans are going through design approvals to have the new interchange constructed in the near term.
- Intersection #5 - International Pkwy & I-580 EB Ramps (AM and PM Peak Hours)
    - A diverging diamond interchange is in the PSE design phase. The City of Tracy and Caltrans are going through design approvals to have the new interchange constructed in the near term.
- Intersection #6 - Hansen Rd & Old Schulte Rd (AM Peak Hour)
    - Add one additional westbound and eastbound through lane at the intersection to establish a 4-lane facility. Old Schulte Road will remain a 2-lane facility over the Delta-Mendota Canal Bridge.
- Intersection #11 – Lammers Rd & Old Schulte Rd (AM Peak Hour)
    - Provide an overlap phase for the eastbound right turn.



- Intersection #12 - Lammers Rd & Western Pacific Wy (AM Peak Hour)
    - Signalize and construct a northbound right-turn and southbound left-turn lanes plus the median of the future widening.
- Intersection #13 - Lammers Rd & Valpico Rd (AM Peak Hour)
    - Signalize intersection and construct a southbound left-turn lane. It is anticipated that widening to a four-lane roadway will occur from Old Schulte Road to Valpico Road with subsequent intersection improvements.
- The project shall, at a minimum, provide emergency access to the future Hansen Road. It is anticipated that the properties west of the Project site may develop in the near future and that Hansen Road will be extended to Old Schulte Road.

All recommended improvements match those from the Cordes Ranch 2nd Consistency Analysis (June, 2020) except at Intersection #11. No improvements were required at Intersection #11 in the Cordes Ranch 2nd Consistency Analysis during Background Conditions; therefore, the improvements provided for Intersection #11 would be an interim solution until the cumulative intersection geometry is constructed.

It should be noted that for some intersections, the reported delay improved with the addition of the project trips. The reason for this occurrence is because the trips were predominately added to the through lane movements, which had a lower movement delay than the average intersection delay, and thereby decreases the overall average delay.

Analysis output sheets for Background Plus Project and Background Plus Project (Improvements) are provided in the **Appendix**.

**Table 11** provides Costco project obligations for the Background Plus Project Conditions.

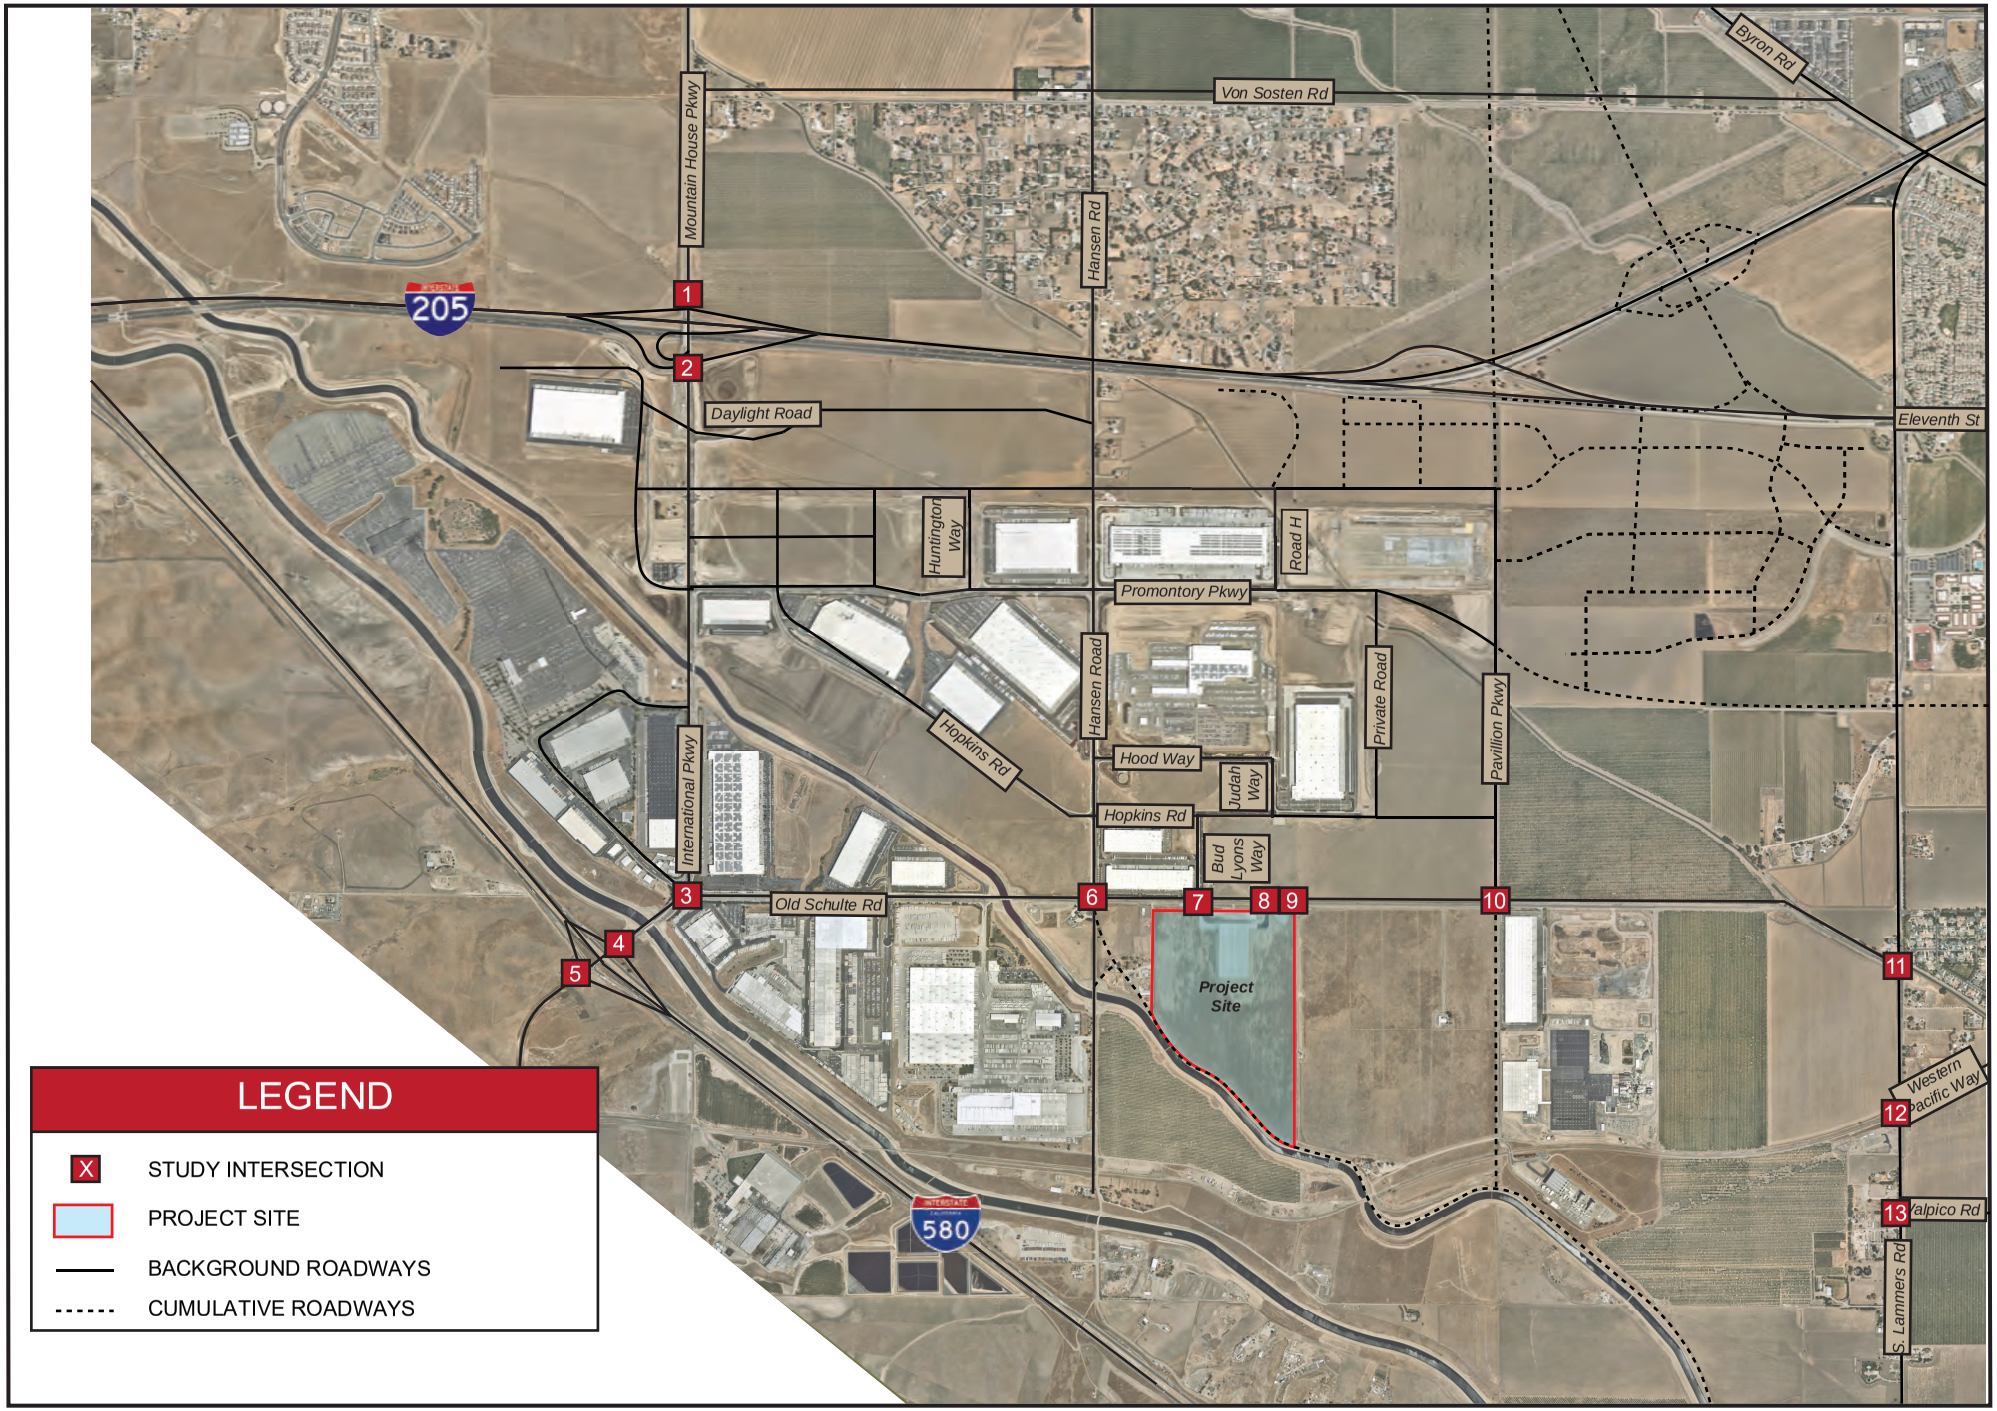
## Table 11 – Costco Obligations (Background Plus Project Conditions)

| Costco Intersection # | Intersection /Location | Peak Hour | Background Plus Project Conditions | | |
|---|---|---|---|---|---|
| | | | Improvement | Recommended Costco Improvement? | Costco Project Obligation |
| 1 | International Pkwy & I-205 WB Ramps | AM | Restripe westbound off-ramp to provide two left-turn lanes and one shared through/right lane and optimize signal timings per Cordes Ranch Specific Plan Final EIR TRANS-1 mitigation measure. | Y | Costco will construct improvements if not already implemented by another development and may collect contributions from future benefitting developments. If improvement is already constructed, Costco shall pay a fair share contribution towards improvements. |
| 3 | International Pkwy & Old Schulte Rd | AM & PM | Per the *Final Traffic Operations Analysis Report (FTOAR) For the Interstate 580/International Parkway/Patterson Pass Road Interchange in Tracy, CA*, a diverging diamond interchange should be constructed at Intersections #4 & #5. The FTOAR recommended an additional northbound right turn at Intersection #3 and to restripe the existing eastbound outside shared through/right lane to be a dedicated eastbound right turn. | Y | Costco will construct improvements if not already implemented by another development and may collect contributions from future benefitting developments. If improvement is already constructed, Costco shall pay a fair share contribution towards improvements. |
| 4 | International Pkwy & I-580 WB | AM & PM | A diverging diamond interchange is in the PSE design phase. The City of Tracy and Caltrans are going through design approvals to have the new interchange constructed in the near term. | Impact Fees | Pay TIF |
| 5 | International Pkwy & I-580 EB | AM & PM | A diverging diamond interchange is in the PSE design phase. The City of Tracy and Caltrans are going through design approvals to have the new interchange constructed in the near term. | Impact Fees | Pay TIF |
| 6[1] | Hansen Road & Old Schulte Rd | AM | Add one additional westbound and eastbound through lane at the intersection to establish a 4-lane facility. Old Schulte Road will remain a 2-lane facility over the Delta-Mendota Canal Bridge. | Y | Costco to implement |
| 11 | Lammers Rd & Old Schulte Rd | AM | Provide an overlap phase for the eastbound right turn. | Y | Costco to implement |
| 12[1] | Lammers Rd & Western Pacific Way | AM | Signalize and construct a northbound right-turn and southbound left-turn lanes plus the median of the future widening. | Y | Costco will construct improvements if not already implemented by another development and may collect contributions from future benefitting developments. If improvement is already constructed, Costco may pay a fair share contribution towards improvements. |
| 13 | Lammers Rd & Valpico Rd | AM | Signalize intersection and construct a southbound left-turn lane. It is anticipated that widening to a four-lane roadway will occur from Old Schulte Road to Valpico Road with subsequent intersection improvements. | Y | Costco will construct improvements if not already implemented by another development and may collect contributions from future benefitting developments. If improvement is already constructed, Costco may pay a fair share contribution towards improvements. |

Notes:

1. Costco will construct improvement if not already implemented by another development. This improvement is anticipated to be included in the City of Tracy Transportation Master Plan (TMP) Fee Program Update. If included, Costco could receive reimbursement for improvements within the fee program.
2. Kimley-Horn traffic study identified TIF, this is not reflected in the conditions.

## 8. Cumulative Conditions



Cumulative Conditions represent 2035 conditions, aligning with the City of Tracy Transportation Master Plan's Horizon Year. The Cumulative Conditions roadway network is shown in **Figure 16**. Cumulative traffic volumes were developed based on recently updated model plots from City of Tracy travel demand forecast model, reflecting the latest development assumptions for the Cordes Ranch and Westside Specific Plan areas, but with the Project volumes removed from the network. Cumulative 2035 link volumes were converted to turning movement volumes using a traffic modeling standard process commonly referred to as the Furness method. The Furness method uses an iterative process to derive future turning movement volumes based on future year roadway link volumes an initial estimate of turning percentage, obtained from existing intersection turning movement counts if available. Intersection lane geometry was based on the Transportation Master Plan and the latest I-205/International Pkwy and I-580/International Pkwy interchange conceptual plans. The Cumulative Conditions lane geometry is shown in **Figure 17** and the volumes are shown in **Figure 18**.

Results of the Cumulative Conditions level of service analysis are presented in **Table 12.** The following intersections operated at unacceptable levels of service:

- Intersection #6 – Hansen Rd & Old Schulte Rd (PM Peak Hour)
- Intersection #10 – Pavilion Pkwy & Old Schulte Rd (PM Peak Hour)
- Intersection #13 - Lammers Rd & Valpico Rd (PM Peak Hour)

Analysis output sheets for Cumulative Conditions are provided in the **Appendix**.

It should be noted that Intersections #3, #4 and #5 were not analyzed for Cumulative Conditions due to extensive analysis conducted and summarized in the FTOAR.

| 13 | Lammers Rd & Valpico Rd | Tracy | Signal | - | 41.1 | D | **-** | **64.1** | **E** |

Note:

1 Analysis performed using HCM 6 methodologies

2 Delay indicated in seconds/vehicle

3 Caltrans level of service (LOS) standard is C/D. City of Tracy LOS standard is D except that LOS E acceptable within 1/4-mile of freeway interchanges (#3).

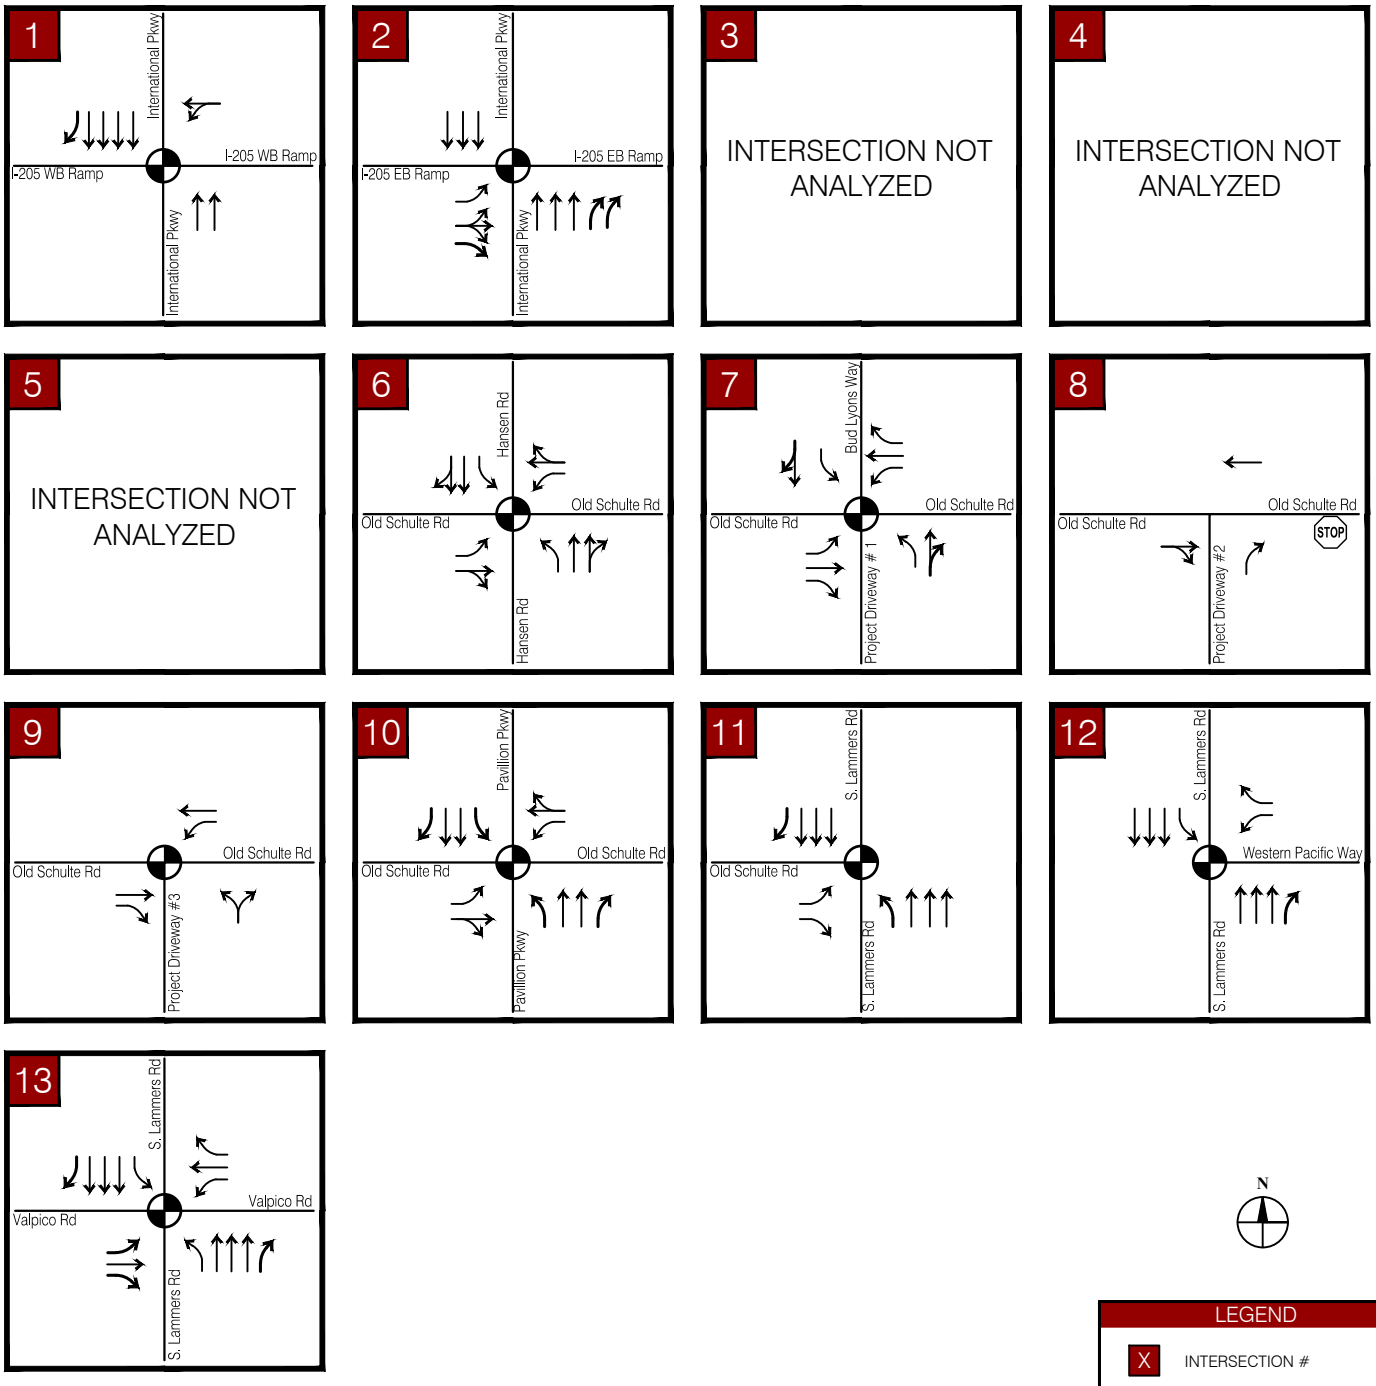
4 Intersections that fall below Caltrans or City standards are shaded and shown in **bold**.

5 AWSC = All-Way Stop Control, TWCS = Two-Way Stop Control, Signal = Signal Control

## 9. Cumulative Plus Project Conditions

Cumulative Plus Project Conditions are based on Cumulative Conditions traffic volumes plus traffic generated by the proposed Project.

Cumulative Plus Project geometries are shown in **Figure 14** and volumes are shown in **Figure 15**.



Results of the Cumulative Plus Project Conditions levels of service analysis are presented in **Table 13**. All intersections operated at acceptable levels of service except for the following intersections:

- Intersection #6 – Hansen Rd & Old Schulte Rd (PM Peak Hour)
- Intersection #10 – Pavilion Pkwy & Old Schulte Rd (PM Peak Hour)
- Intersection #13 - Lammers Rd & Valpico Rd (PM Peak Hour)

The Cumulative Conditions analysis does not indicate that the Project deteriorates the LOS or causes delay to increase by more than 5 seconds per the City threshold at any study intersection, and thus, no project improvements are required over and above those identified in Background conditions. The project shall, however, pay the City Traffic Impact Fees to offset cumulative incremental deterioration of operating conditions on the City road network.

Analysis output sheets are provided in the **Appendix**.

It should be noted that Intersections #3, #4 and #5 were not analyzed for Cumulative Conditions due to extensive analysis conducted and summarized in the FTOAR.

5 AWSC = All-Way Stop Control, TWCS = Two-Way Stop Control, Signal = Signal Control

6 An impact is determined if the intersection delay increases by more than 5 seconds

## 10. Driveway Access Review

The Project proposes three driveways along Old Schulte Road. **Table 14** provides a summary of the recommendations for each driveway.

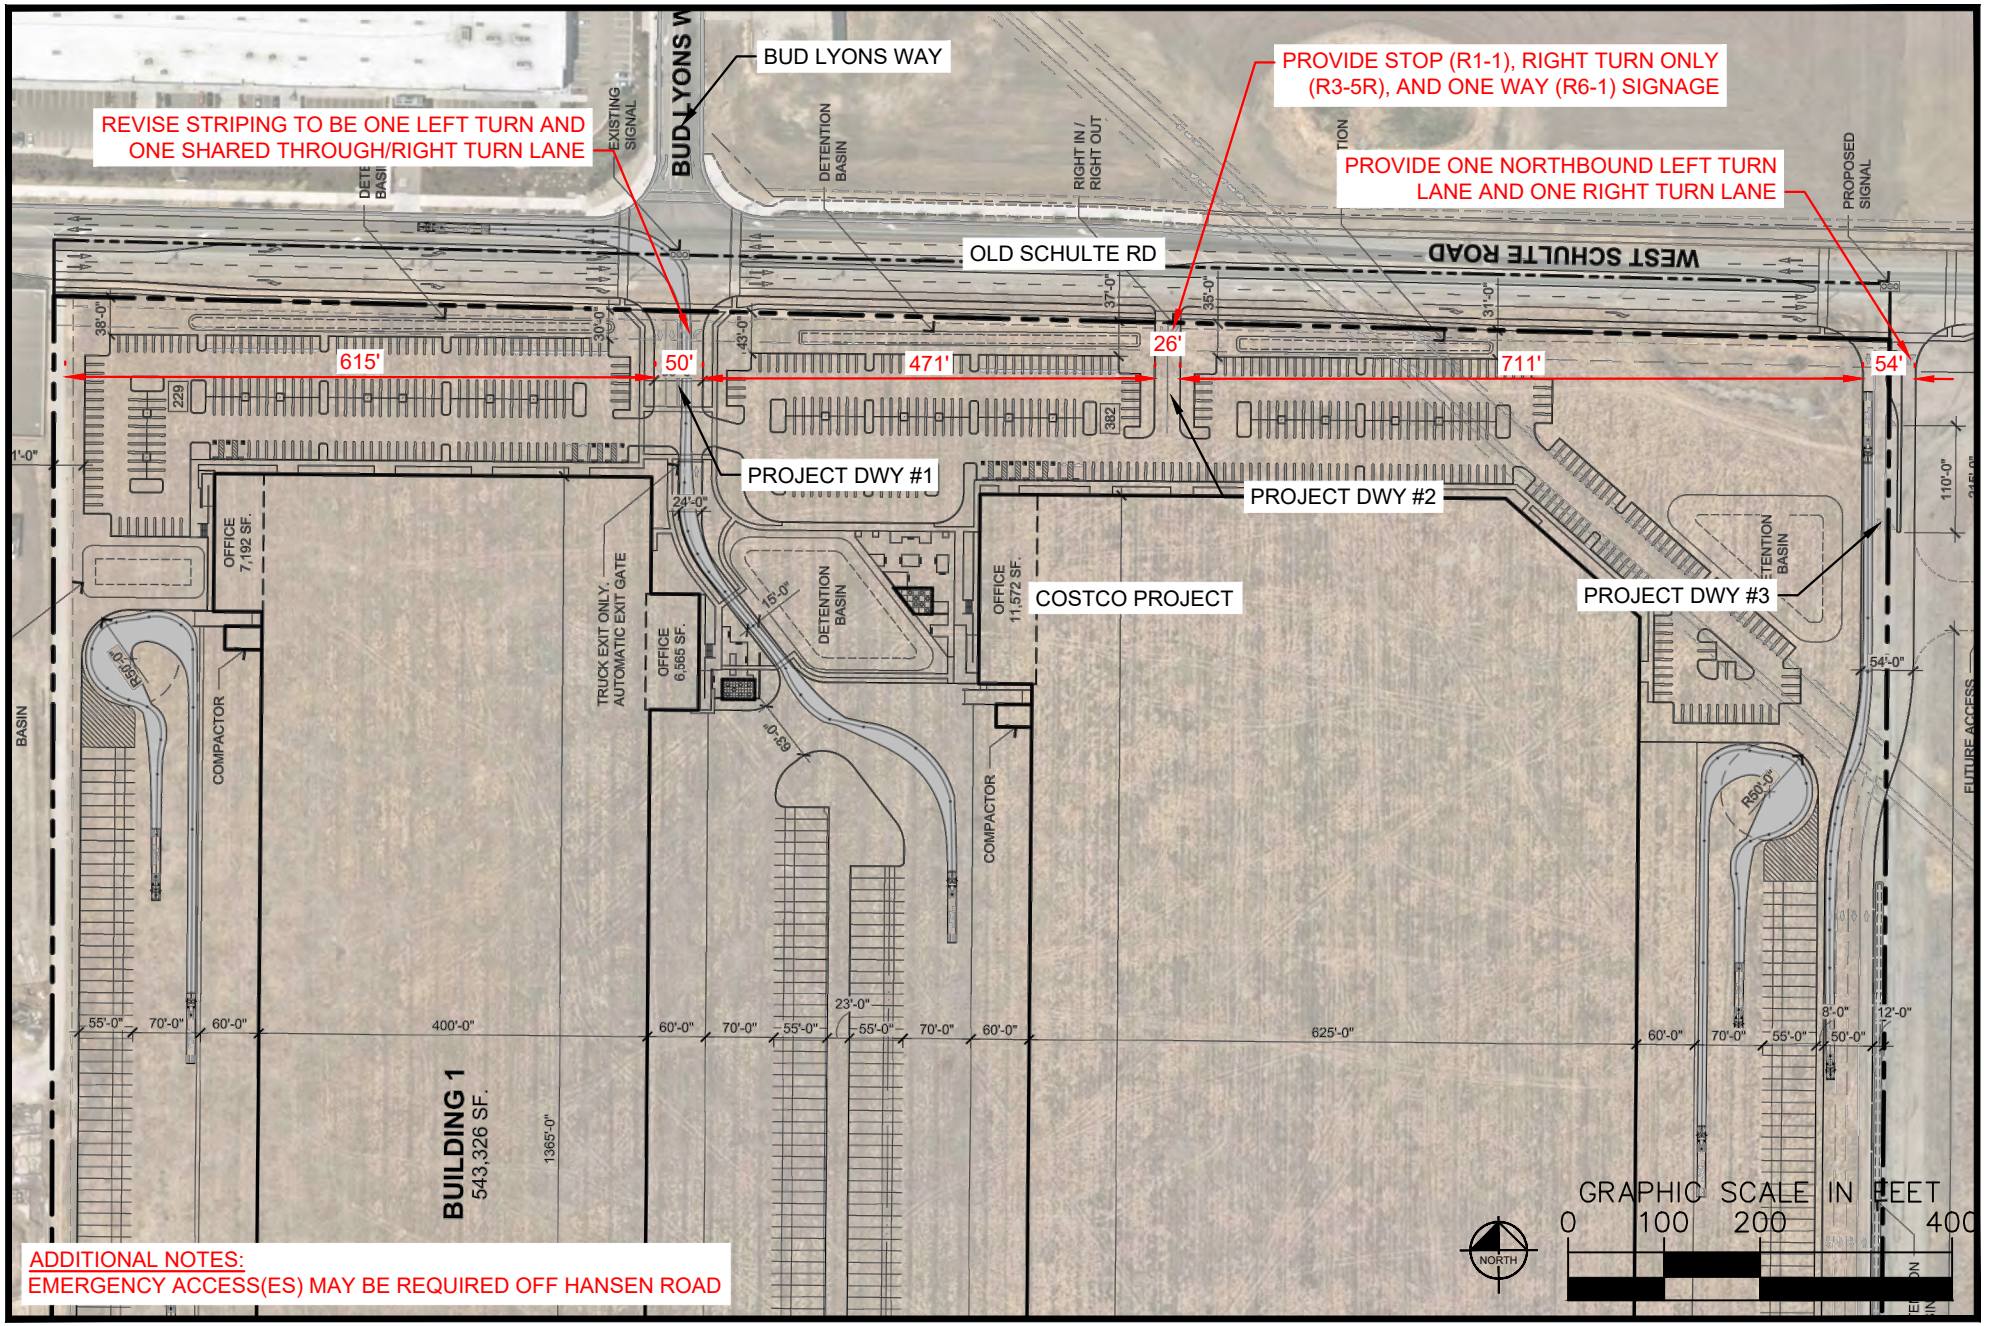

**Table 14 – Driveway Access Review**

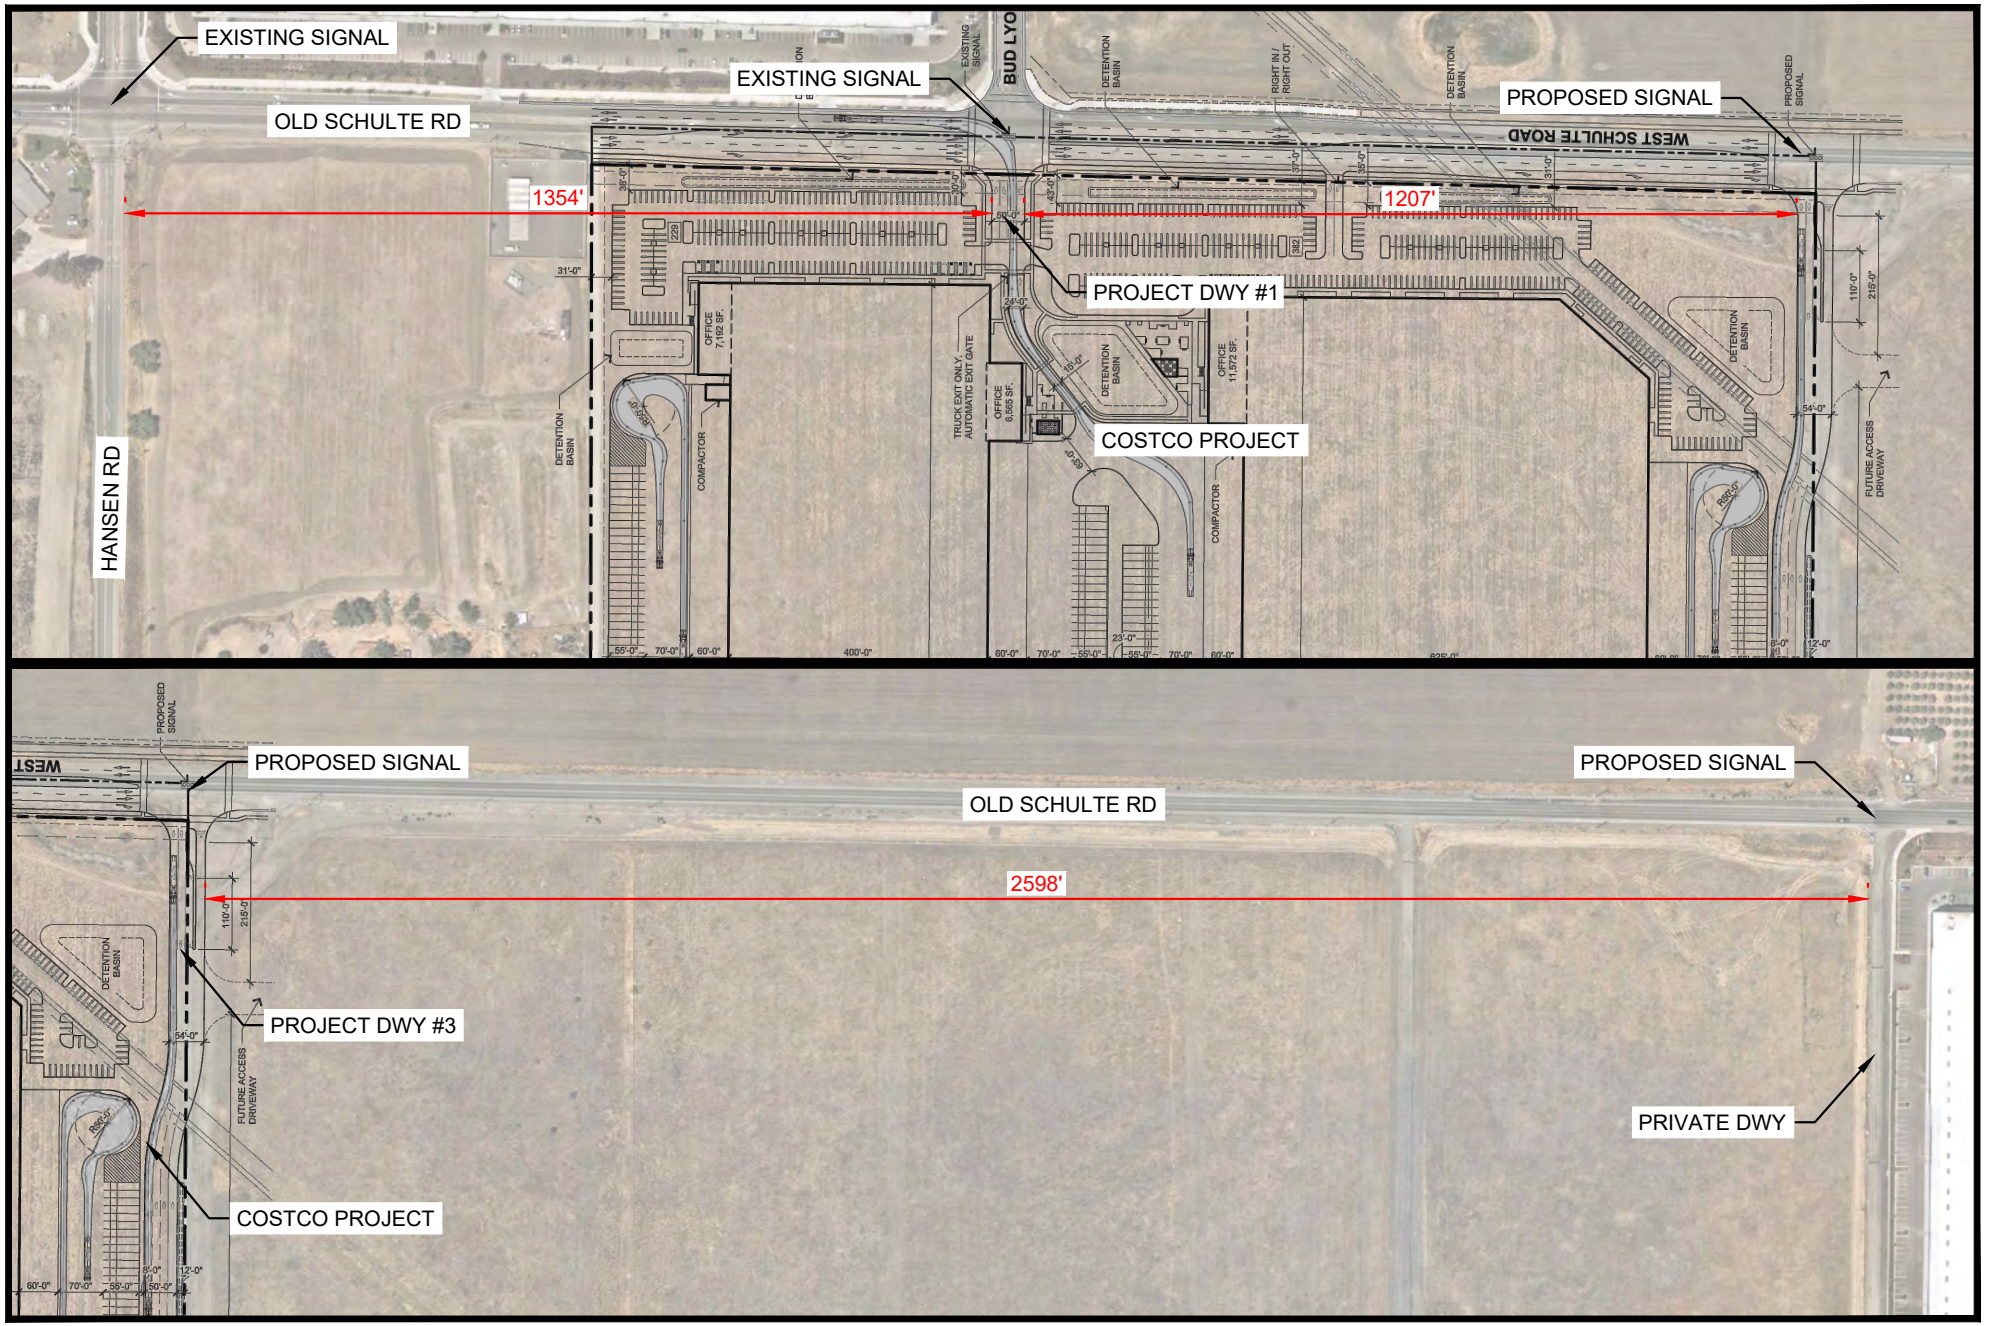
| # | Width | Proposed Control | Proposed Access | Proposed Vehicle Type | Recommendations/Comments |
|---|---|---|---|---|---|
| 1 | 50’ | Signal | Full | Cars & Trucks Out | • Revise striping to the following: 1 left turn and 1 through/right turn lane. |
| 2 | 26’ | SSSC | RIRO | Cars | • Provide Stop (R1-1), Right Turn Only (R3-5R), and One Way (R6-1) signage. |
| 3 | 54’ | Signal | Full | Trucks In & Out | • A left turn lane and a right turn pocket are needed for the signal. |
| Additional Notes | | | | | • Emergency vehicle access(es) may be required off Hansen Road. |

Notes:
1. SSSC = Side Street Stop Control
2. RIRO = Right In / Right Out Access; Full = Full Access

**Figure 21** illustrates the driveway spacing, widths, and recommendations. **Figure 22** shows the signal spacings along Old Schulte Road between existing and proposed signals. The proposed Project signals provide sufficient spacings.

See the Vehicle Turning Templates section for a review of passenger cars and trucks at the Project driveways and the External Network Review section for a review of the Project frontage and turn lanes required at Project driveways and intersections.



ADDITIONAL NOTES:
EMERGENCY ACCESS(ES) MAY BE REQUIRED OFF HANSEN ROAD

## 11. Internal Circulation Review

*Truck Gate Queuing Review*

An internal truck gate queuing analysis was performed to determine if the proposed truck entrance at Project Driveway #3 can adequately accommodate queuing on-site without spilling onto Old Schulte Road. The Project site proposes three entrance lanes and one exit lane. All trucks entering the site will enter at Project Driveway #3.

Two queueing analysis scenarios were analyzed:

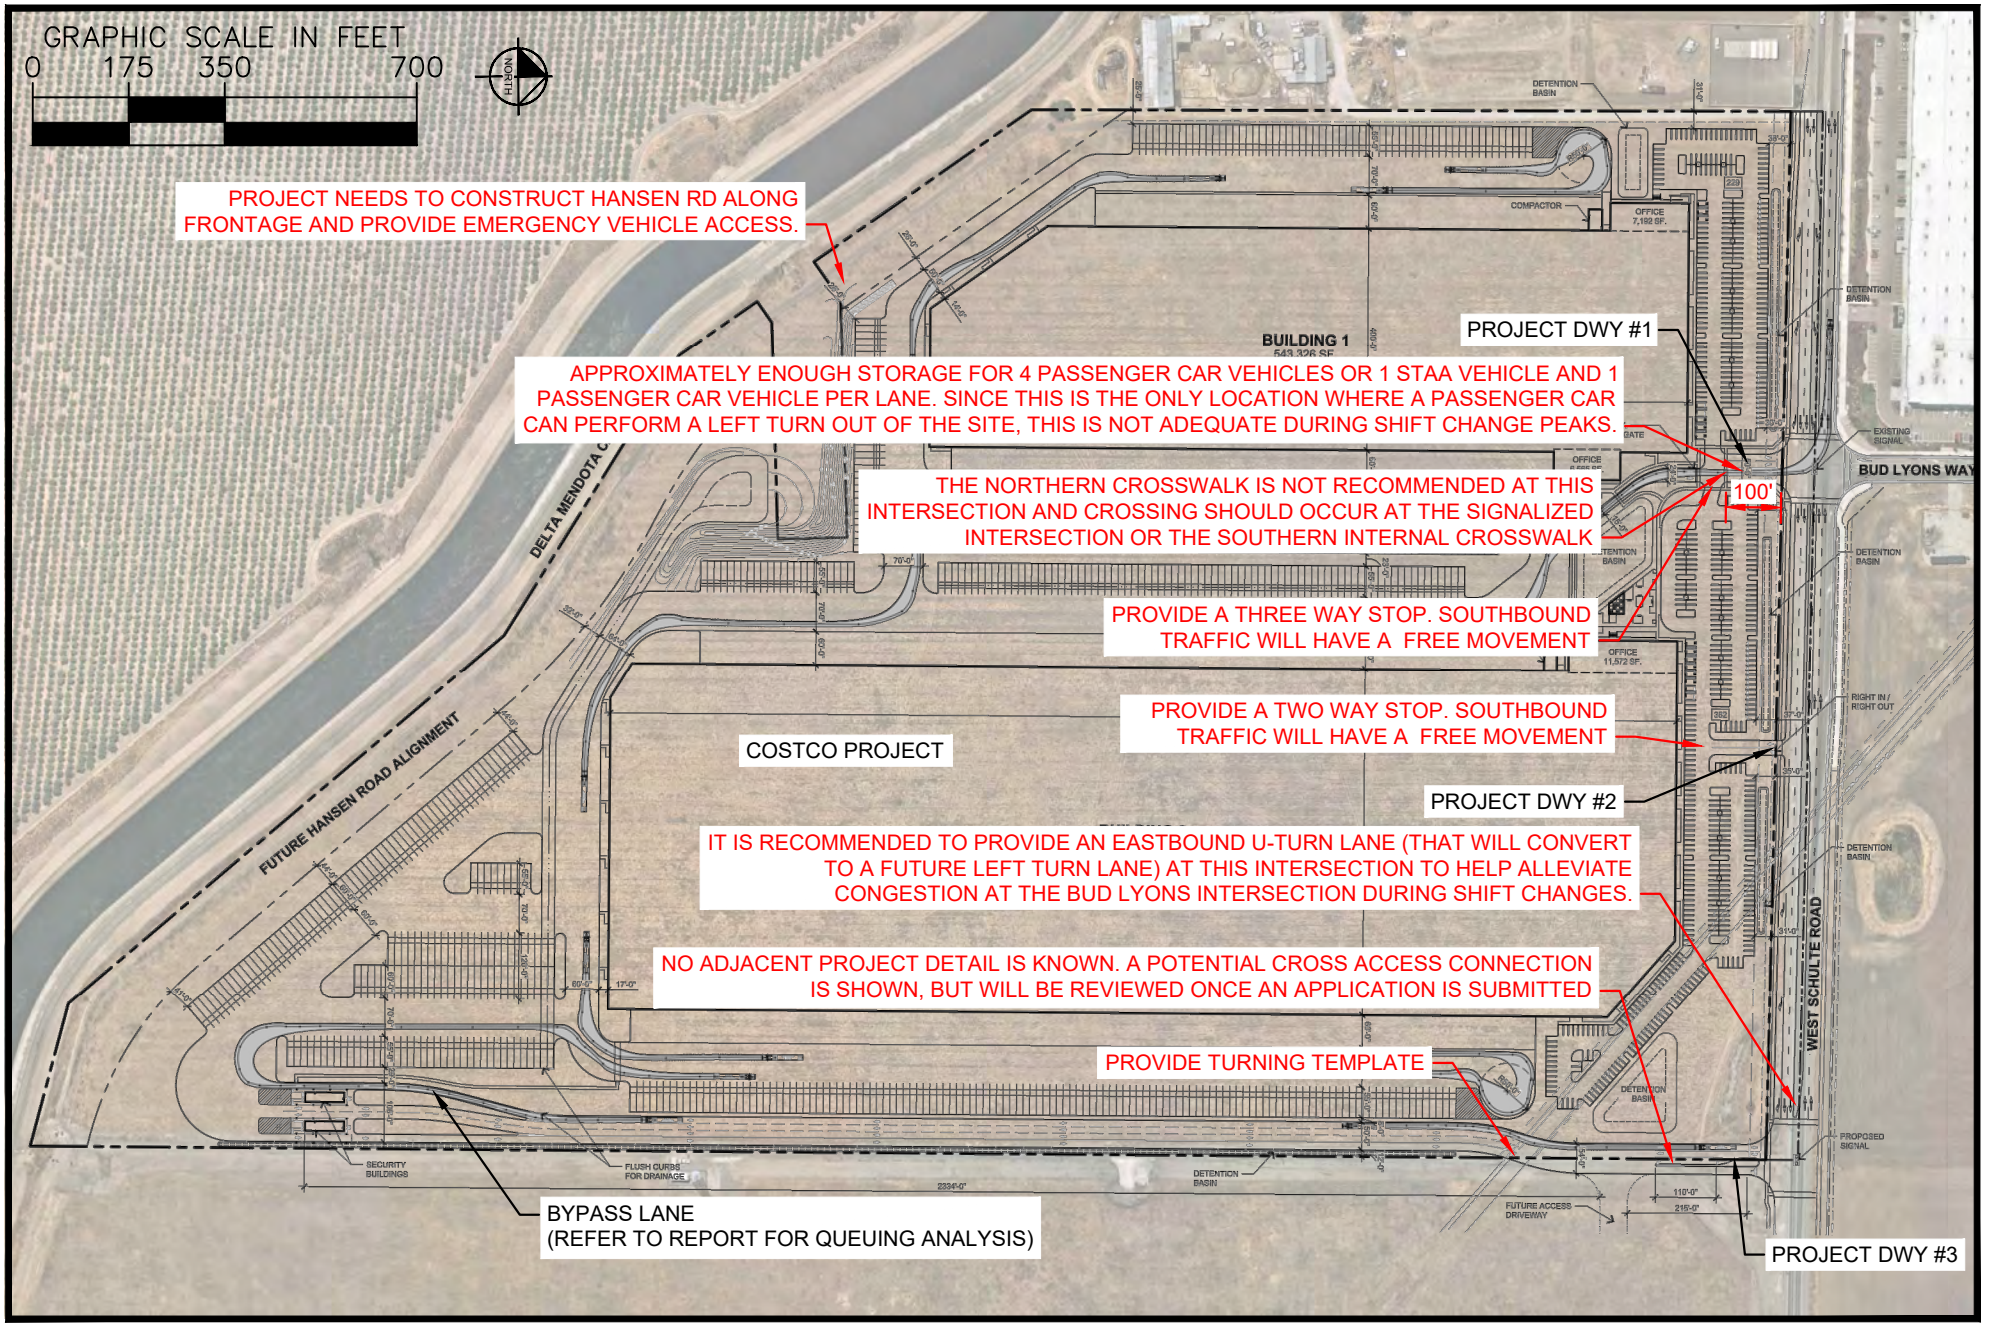
1. All three lanes stopping at the security buildings
2. Two lanes stopping at the security buildings and one lane bypassing the security buildings.
    a. The expectation is that Costco Direct Delivery Center will have means of identifying certain trucks that will allow those trucks to avoid stopping at the security buildings when entering.

Operations at the existing Costco distribution warehouse located on Old Schulte Road west of the Project site were observed in November 2020 from 10:35 AM to 11:30 AM. The existing site has one bypass lane and two service lanes. From this observation, it was recorded that each truck was processed at a rate of 170 seconds per truck (approximately 3 minutes per truck). It was also recorded that approximately 50% of entering trucks use the bypass lane.

The following assumptions were used to calculate the truck entrance queuing:

- Uniform arrival rate
- 3-minute service time per truck that stops at a security building
- 2,300 feet per lane of available storage
- To determine an initial queue and off-peak hour queuing, ITE's Time of Day Distribution was utilized to estimate what percentage of the peak hour trips would occur during the off peaks. Trucks entering the site would be distributed as follows during the three peak hours of queue analysis:
    - 30% of the peak hour trips would arrive in the hour just before the peak hour
    - 70% of the peak hour trips would arrive in the hour just after the peak hour
    - 50% of the peak hour trips would arrive in the following hour
- 50% of truck trips will utilize the bypass lane (Scenario 2 only)

See the **Appendix** for queuing calculations. The expected queue per scenario is the following:



- Scenario 1 (no bypass lane) – 2,100 ft
- Scenario 2 (with bypass lane) – 750 ft

The analysis indicates that the vehicle storage for full gate control, Scenario 1, is marginally sufficient. If one bypass lane is provided, the storage is adequate.

*Site Plan Comments*

A review of the internal circulation has been provided in **Figure 23**. The following summarizes the comments:

- Approximately 100 feet is provided between Old Schulte Road and the internal drive aisle. This is only enough space for 4 passenger car vehicles or 1 STAA and 1 passenger car vehicle per lane. Since this is the only location where a passenger car can perform a left turn out of the site, this is not adequate during the shift change peaks. To alleviate congestion at this point, it is recommended to provide an eastbound U-turn lane (that could potentially convert to a future left turn lane) at the Old Schulte Road and Project Driveway #3 signalized intersection.
- At Project Driveway #1, the northern internal crosswalk should be removed as this will conflict with vehicles entering and exiting the Project. This crossing should occur at the signal instead or at the southern internal crosswalk.
- Provide a three way stop at the Project Driveway #1 internal intersection with the inbound movement as the free movement.
- No project detail is known for the eastern adjacent parcel that will share Project Driveway #3. The cross access shown will be reviewed in the future, once a development application is submitted for the adjacent parcel.
- Provide clear signage and/or pavement markings for trucks entering Project Driveway #3 that designates security versus bypass lanes.
- Provide truck turning templates at reverse curve within Project Driveway #3.

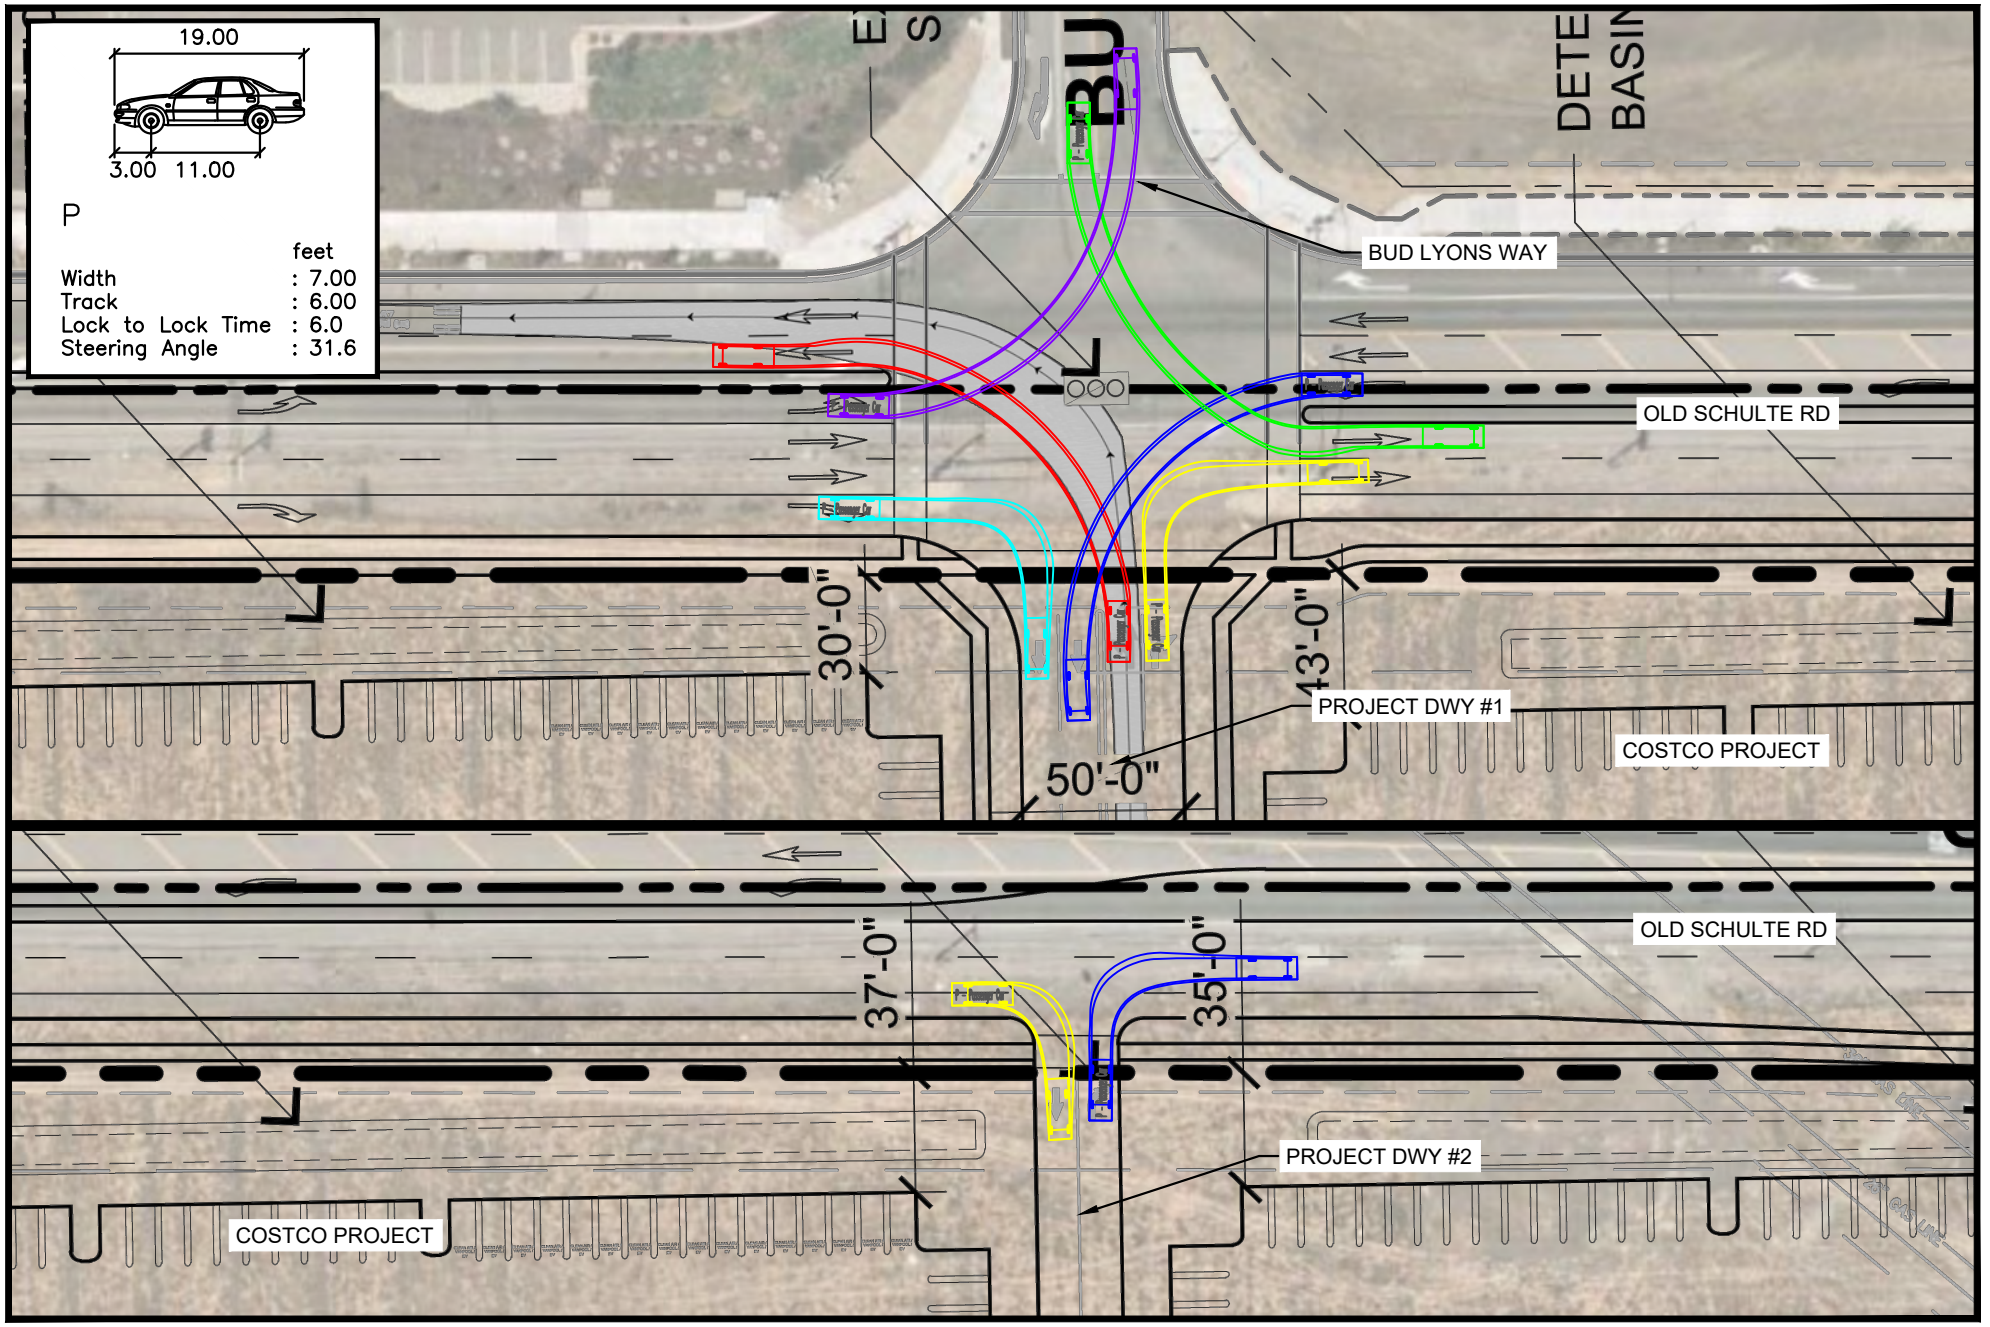
## 12. Vehicle Turning Templates

The following design vehicles were analyzed at each Project driveway:

1. Passenger Car
2. STAA Truck

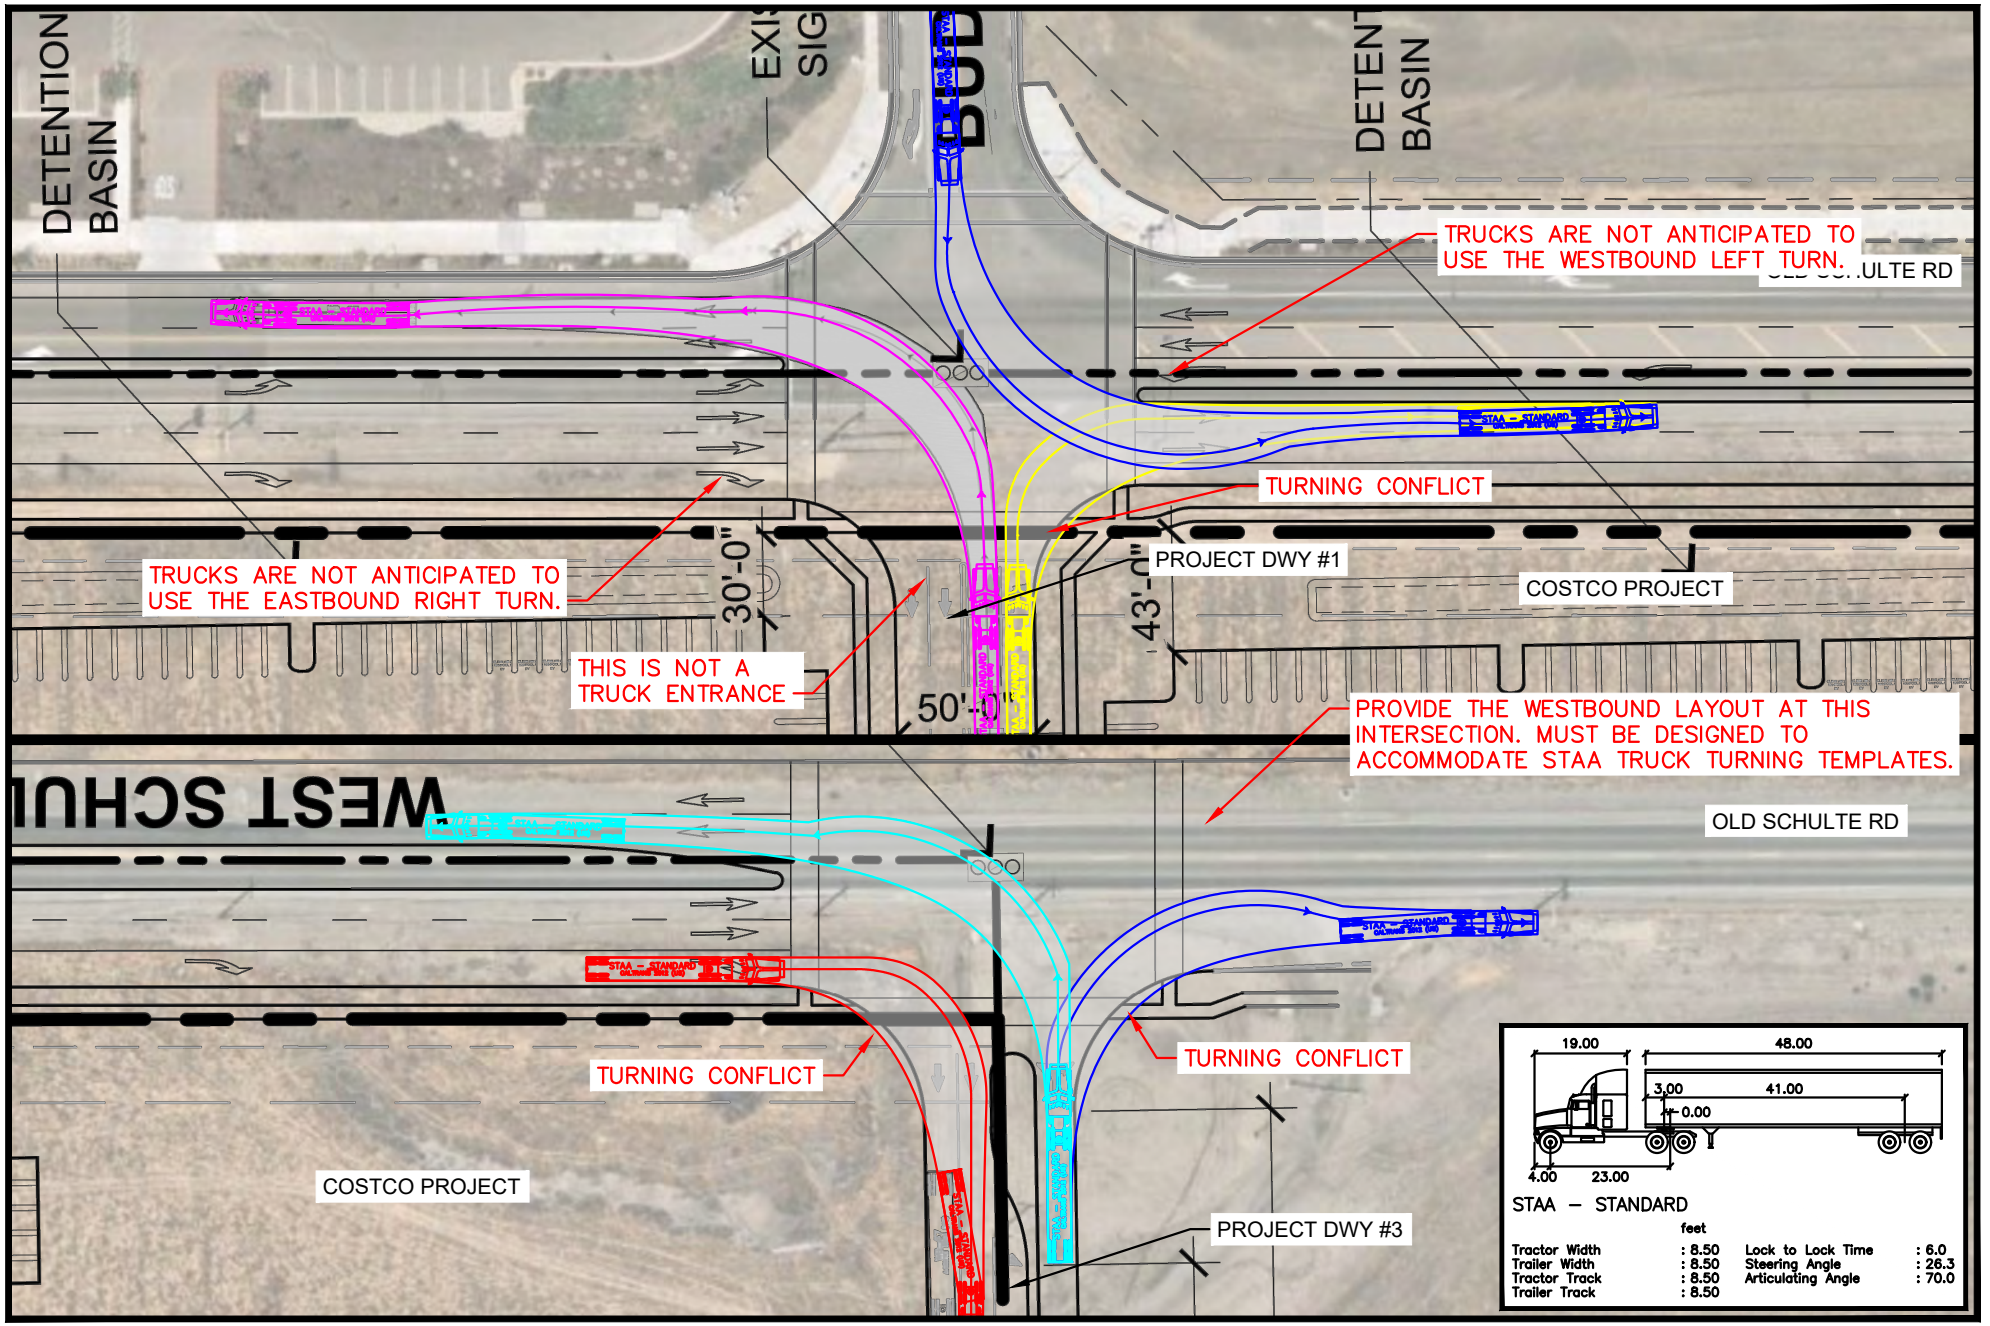


It is anticipated that passenger cars will only access the site from Driveways #1 and #2. It is anticipated that STAA trucks will only exit the site at Driveway #1 but can fully access the site at Driveway #3.

**Figure 24** illustrates the passenger car turning templates and **Figure 25** illustrates the STAA truck turning templates.

It was determined that a passenger car can access the site with no turning conflicts.

The following comments have been provided for the STAA turning templates:



- STAA trucks are unable to perform northbound right turn at Driveway #1. Design modifications to the proposed curb are required to allow STAA trucks to perform necessary movements to access the site.
- STAA trucks are unable to perform eastbound and northbound right turns at Driveway #3. Design modifications to the proposed curb are required to allow STAA trucks to perform necessary movements to access the site.
- A westbound left turn must be provided at Driveway #3 and it must accommodate a STAA truck turning template.

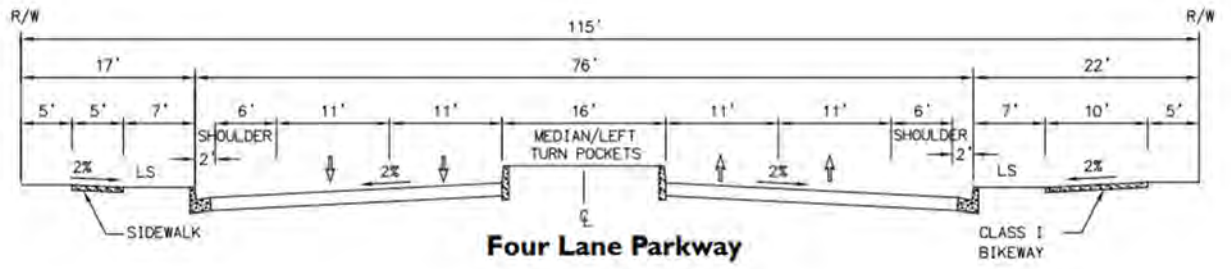
## 13. External Network Review

The Project frontage was reviewed per the City of Tracy TMP 4-Lane Parkway cross section provided in **Figure 26**.

**Figure 26 – 4-Lane Parkway TMP Cross Section**



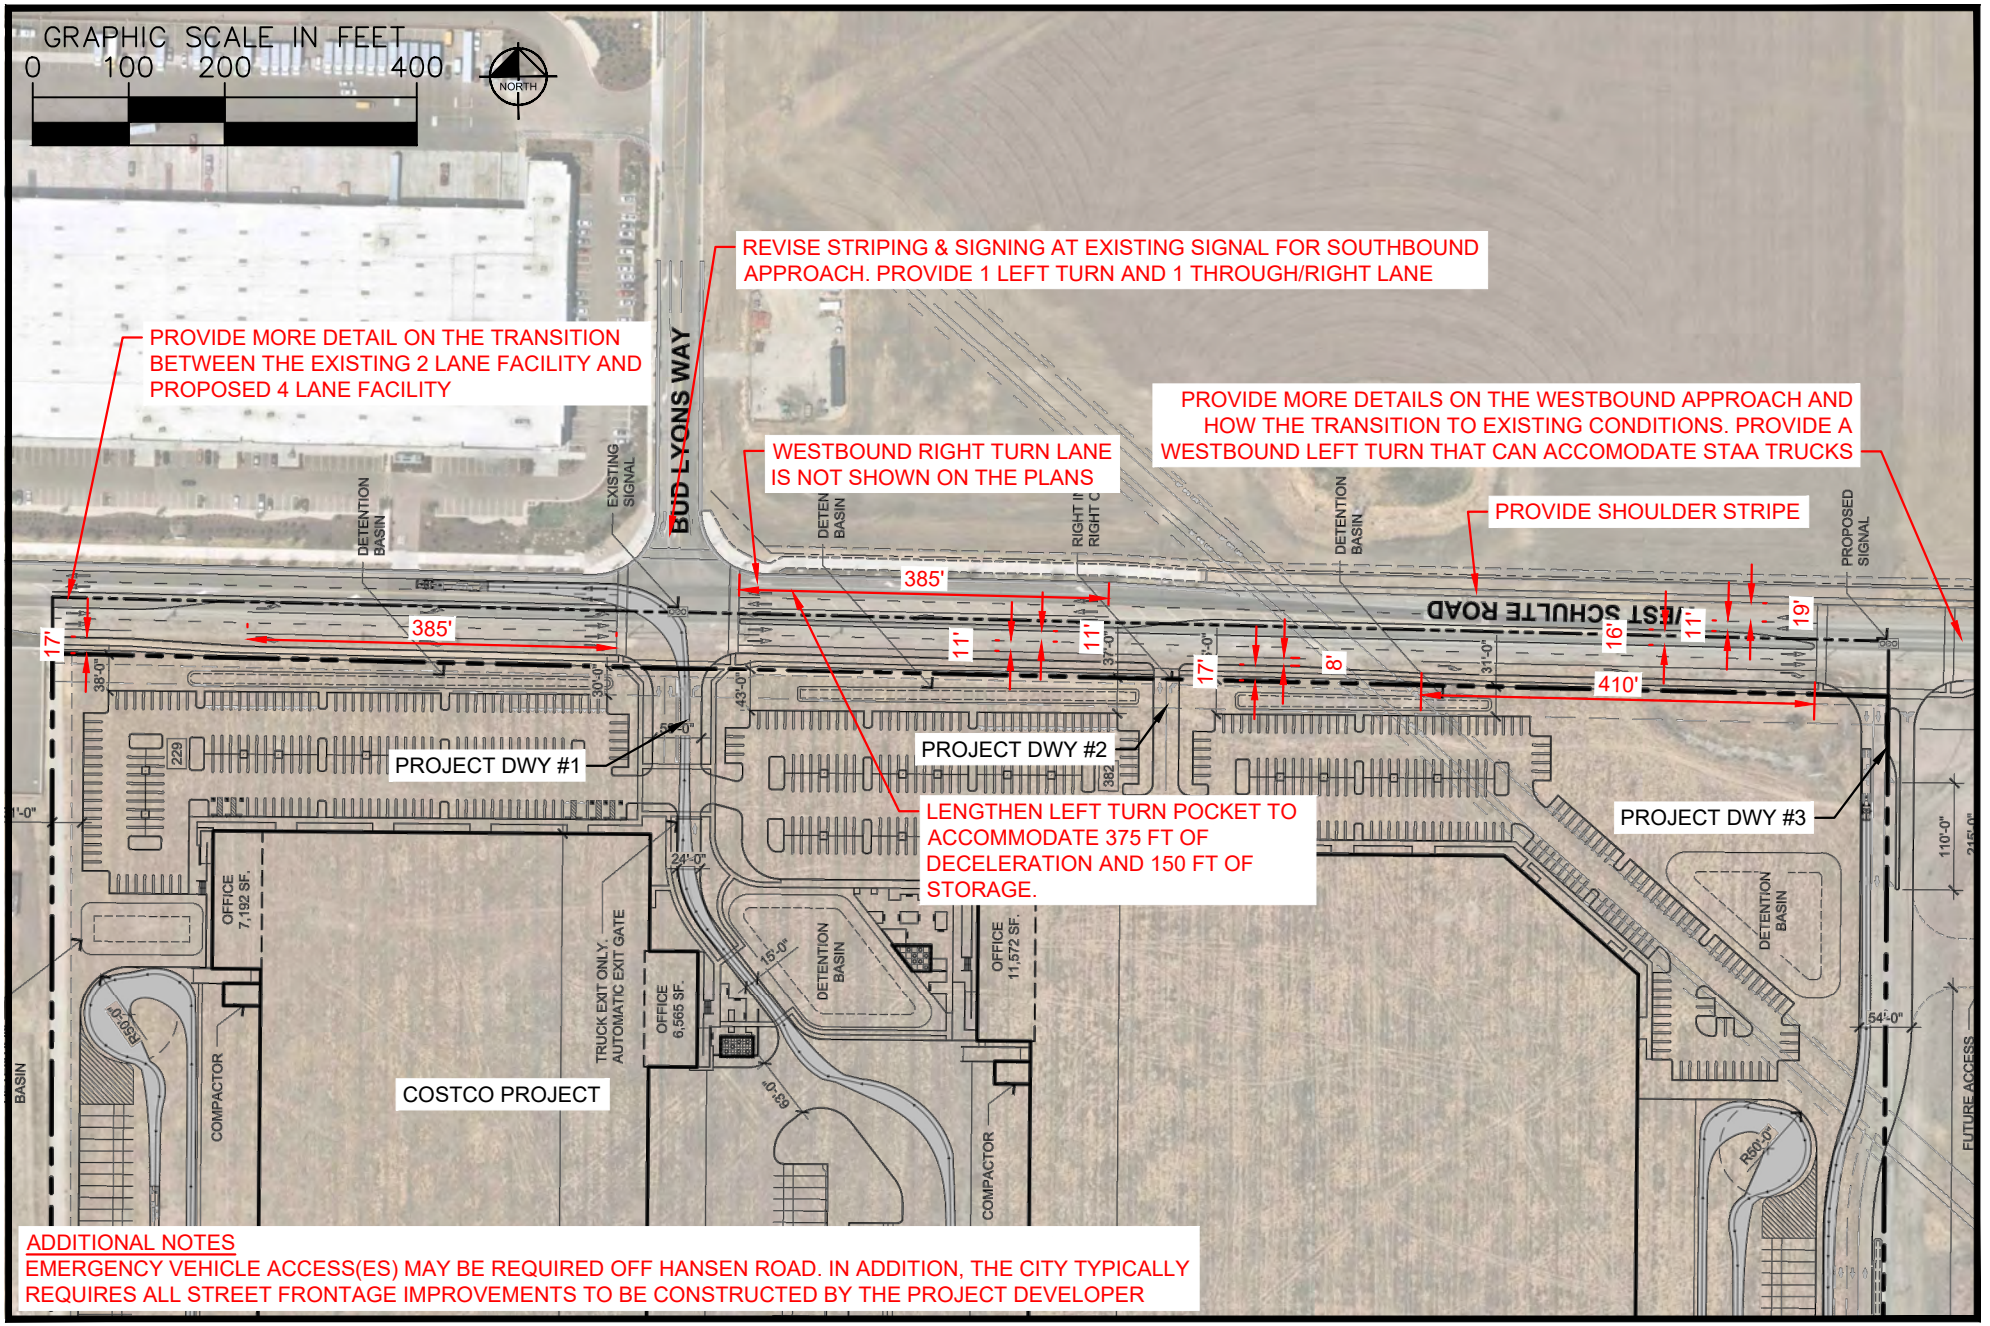


**Figure 27** illustrates the external network comments. The following summarizes the comments:

- Provide more detail on the transitions between existing conditions on both the east and west end of the Project limits.
- Provide the striping at the intersection of Old Schulte Road and Project Driveway #3. This approach must include a westbound left turn pocket that can accommodate a CA-STAA truck.
- Revise the signing and striping for the southbound movement at Old Schulte Road and Bud Lyons Way. Provide one left turn and one through/right lane.
- The Westbound right turn lane at the intersection of Old Schulte Road and Bud Lyons is existing and should be shown on the plan set.
- Provide eastbound shoulder stripe.
- Lengthen the westbound left turn lane at Project Driveway #1 to accommodate 375 feet of deceleration and 150 feet of storage.
- Emergency vehicle access(es) may be required off Hansen Road. In addition, the City typically requires all street frontage improvements to be constructed but the Project developer.

## 14. Merge Analysis on Westbound Old Schulte Road East of the Delta-Mendota Canal Bridge

A review of the Old Schulte Road roadway widening at the Delta-Mendota Canal Bridge was conducted to determine if queues from the merge would spill back into the Hansen Road and Old Schulte Road intersection.

Currently, the Delta-Mendota Canal Bridge is a two-lane facility and is located on Old Schulte Road just east of the Costco Development. The purpose of this study is to determine if the Delta-Mendota Canal Bridge widening is required by Phase 1 or the full Costco development.

*Queuing Analysis*

Queuing analysis was completed using SimTraffic 11 and the average of 5 seedings were utilized, consistent with industry practice. The following conditions were analyzed:

- Background Conditions without bridge widening
- Background Plus Phase 1 Conditions (without bridge widening)
- Background Plus Costco Buildout Conditions (without bridge widening)

For this analysis only the AM peak hour were analyzed because it was determined that the deficiency occurred in the westbound direction during the AM peak hour in the previous study.

For information on volumes utilized for this analysis refer to the Costco Direct Delivery Center Traffic Analysis (June 2022).

The following improvement has been assumed:

- Widening of Old Schulte Road
    - Widen Old Schulte Road to a four-lane facility from 295 feet west of Hansen Road to the eastern boundary of the Costco Project.

The distance from the Delta-Mendota Canal Bridge to the Hansen Road and Old Schulte Road intersection is approximately 900 feet. According to the Caltrans Highway Design Manual (HDM), the necessary lane merge distance for a 45 MPH road (design speed of 55 MPH) with 11-foot wide lanes is equivalent to 605 feet (55 MPH * 11 feet) of merge distance required. Therefore, the lane merge must occur approximately 295 feet west of the intersection of Hansen Road and Old Schulte Road.

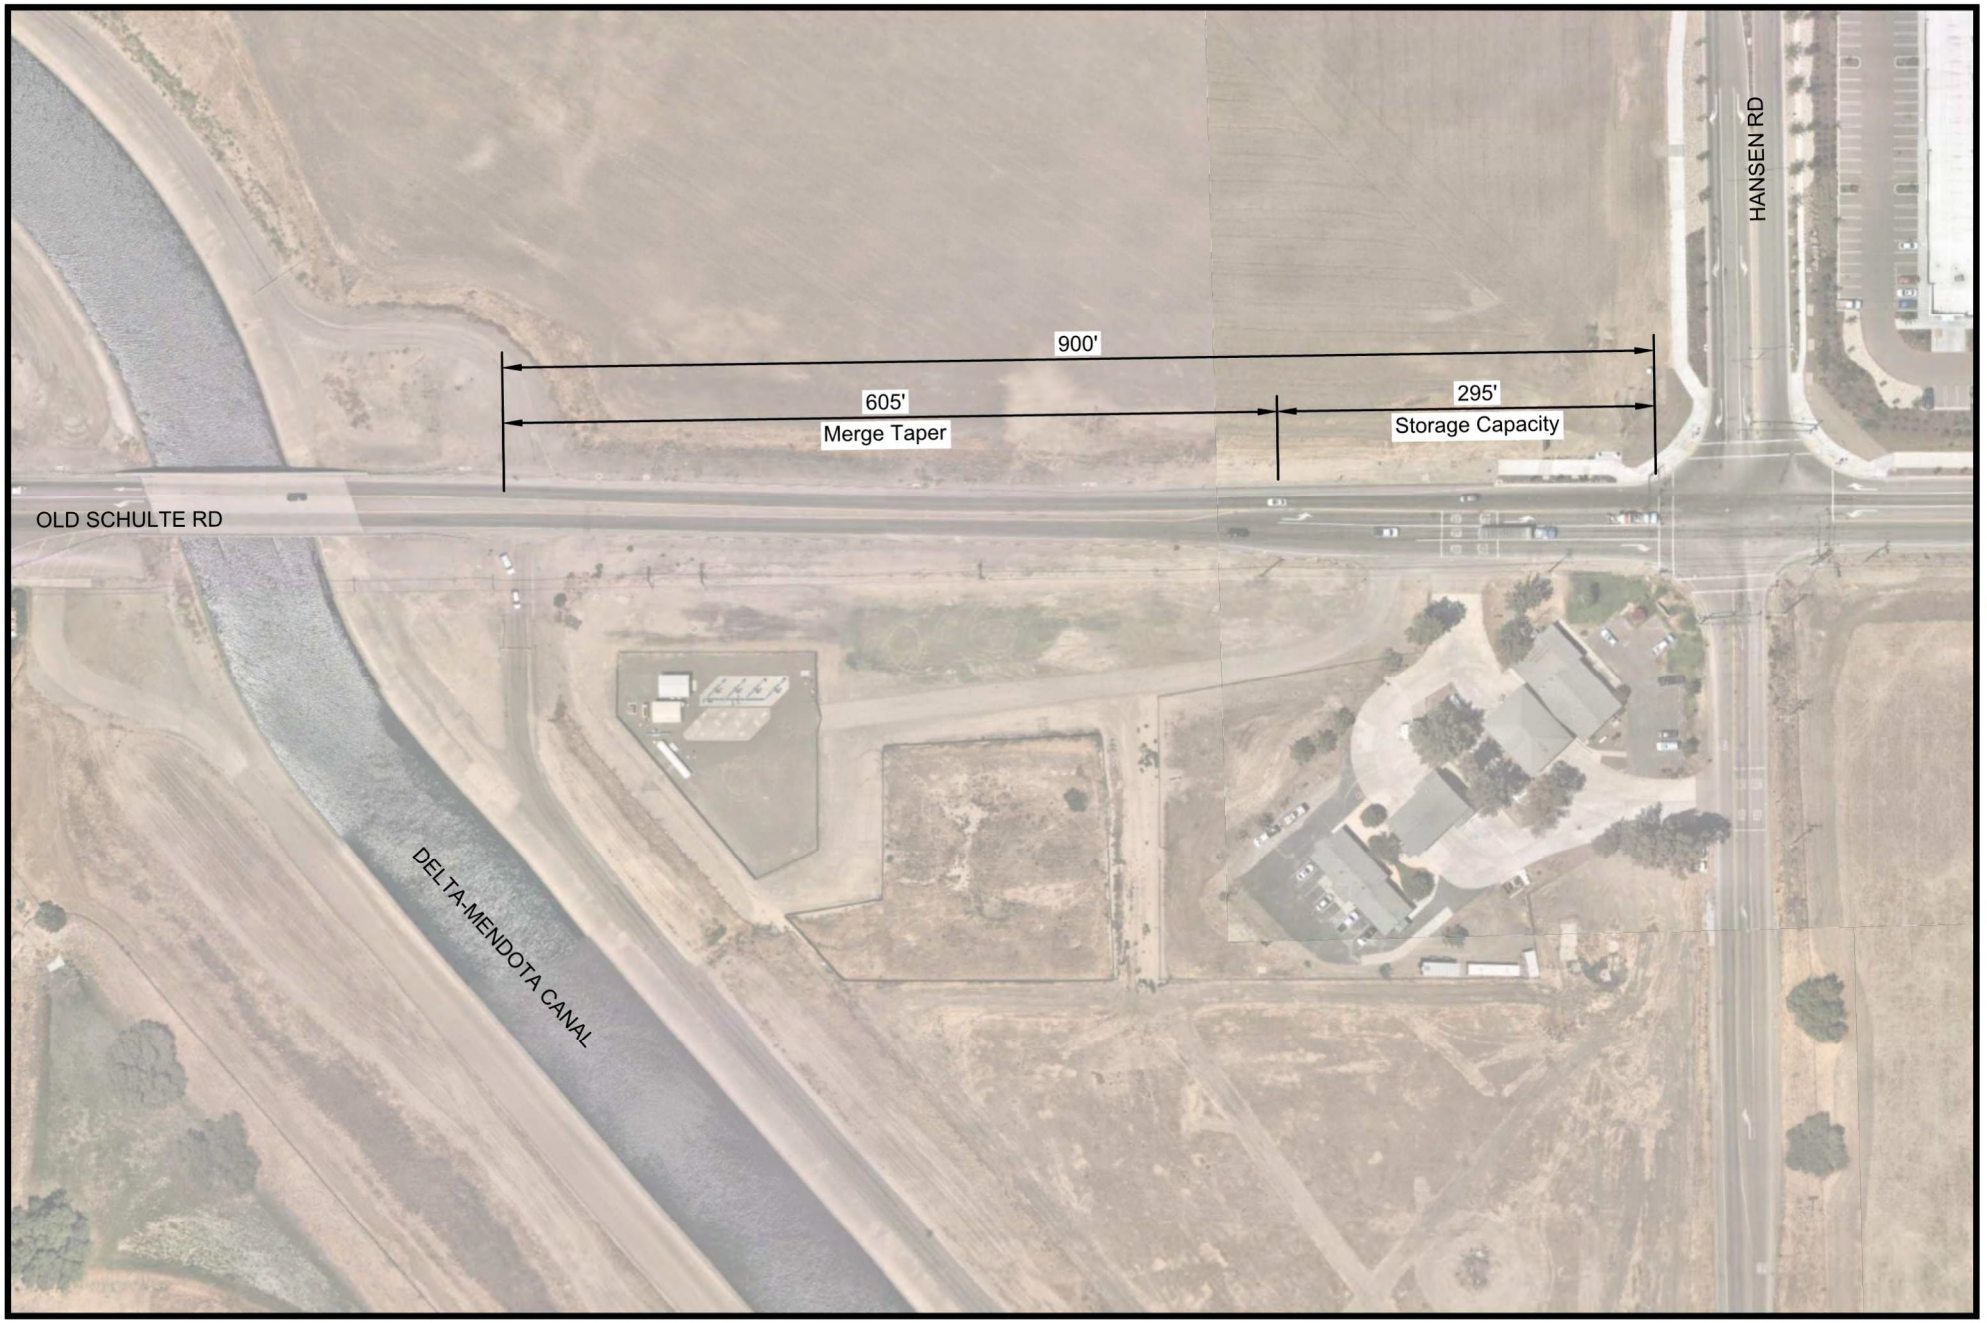
**Figure 28** provides an illustration of the HDM requirements.

**Table 15** provides the 95$^{th}$ percentile queueing analysis for the Project. **Table 16** provides the maximum queueing analysis for the Project.

From the analysis it was determined that the 95$^{th}$ percentile queues for Phase 1 and the full Costco development would not extend into the intersepction. The maximum queues were provided for informational purposes and it was determined that the maximum queues could extend into the intersection; however, standard practice is to utilize the 95$^{th}$ percentile queue for analysis. Small flucations in traffic (increase) would result in the westbound 95$^{th}$ percentile queues extending into the Hansen Road and Old Schulte Road intersection.

Therefore, this analysis shows that the Costco development is not triggering the widening of the Delta-Mendota Canal Bridge for Background Plus Project Conditions. It was concluded from the queuing analysis, that the widening of the Delta-Mendota Canal Bridge is imminent.

**Table 15 – 95th Percentile Queueing Analysis**



| Scenario | Available Queue Capacity | AM Westbound 95th Percentile Queue | | 95th Percentile Queue Acceptable? (Y/N) |
|---|---|---|---|---|
| | | Lane 1 | Lane 2 | |
| Background Conditions | 295 ft | 148 ft | 69 ft | Y |
| Background Plus Phase 1 Conditions (without bridge widening) | | 174 ft | 71 ft | Y |
| Background Plus Costco Development Conditions (without bridge widening) | | 165 ft | 100 ft | Y |

Notes
1. Simtraffic Simulations results are averaged from 5 simulations

**Table 16 – Maximum Queueing Analysis**

| Scenario | Available Queue Capacity | AM Westbound Maximum Queue | | Maximum Queue Acceptable? (Y/N) |
|---|---|---|---|---|
| | | Lane 1 | Lane 2 | |
| Background Conditions | 295 ft | 232 ft | 122 ft | Y |
| Background Plus Phase 1 Conditions (without bridge widening) | | **304 ft** | 143 ft | **N** |
| Background Plus Costco Development Conditions (without bridge widening) | | **309 ft** | 270 ft | **N** |

FINAL REPORT | DECEMBER 2021

# Table of Contents

**Executive Summary** ..... **1**

Purpose of Water Supply Assessment ..... 1

Proposed Project Overview ..... 1

Potable and Recycled Water Demands and Supply Availability ..... 1

Determination of Water Supply Sufficiency ..... 2

**1.0 Introduction** ..... **3**

1.1 Legal Requirement for Water Supply Assessment ..... 3

1.2 Need for and Purpose of Water Supply Assessment ..... 3

1.3 Water Supply Assessment Preparation, Format and Organization ..... 3

**2.0 Description of Proposed Project** ..... **5**

2.1 Proposed Project Location ..... 5

2.2 Proposed Land Uses and Acreages ..... 5

2.3 Projected Water Demand ..... 8

2.4 Projected Water Supply ..... 8

**3.0 Required Determinations** ..... **10**

3.1 Does SB 610 apply to the Proposed Project? ..... 10

3.2 Does SB 221 apply to the Proposed Project? ..... 10

3.3 Who is the Identified Public Water System? ..... 11

3.4 Does the City have an adopted Urban Water Management Plan (UWMP) and does the UWMP include the projected water demand for the Proposed Project? ..... 11

**4.0 City of Tracy Water Service Area** ..... **12**

4.1 Water Service Area ..... 12

4.2 Population ..... 12

4.3 Climate ..... 13

**5.0 City of Tracy Water Demands** ..... **15**

5.1 Historical and Existing Water Demand ..... 15

5.2 Future Water Demand ..... 15

5.3 Dry Year Water Demand ..... 16

**6.0 City of Tracy Water Supplies** ..... **18**

6.1 Existing Potable Water Supplies ..... 19

6.1.1 Central Valley Project Water via the Delta-Mendota Canal ..... 19

6.1.1.1 Municipal and Industrial Reliability Contract ..... 21

6.1.1.2 Agricultural Reliability Contract ..... 21

6.1.1.3 South-of-Delta Allocations ..... 21

# EXECUTIVE SUMMARY

## Purpose of Water Supply Assessment

The purpose of this Water Supply Assessment (WSA) is to perform the evaluation required by California Water Code sections 10910 through 10915, as established by Senate Bill 610 (SB 610), in connection with the City of Tracy's (City) proposed Tracy Costco Depot Project (Proposed Project). This WSA evaluates the adequacy of the City's total projected water supplies, including existing water supplies and future planned water supplies, to meet the City's existing and projected future water demands, including those future water demands associated with the Proposed Project, under all hydrologic conditions (Normal Years, Single Dry Years, and Multiple Dry Years).

Since the Proposed Project does not meet the definition of a residential subdivision, this WSA does not include the requirements of California Government Code section 66473.7(a)(1), as established by SB 221 in 2001.

## Proposed Project Overview

The Proposed Project is located at 16000 West Schulte Road in unincorporated San Joaquin County, California. The project site is within the Tracy Sphere of Influence (SOI) and is immediately adjacent to the Tracy city limits to the north of the site. The Assessor's Parcel Number (APNs) for the project site is 2019-230-020. The project site totals approximately 103 acres of undeveloped land previously used for agricultural purposes. The elevation of the site ranges from approximately 148 feet to 187 feet above mean sea level (msl). The Proposed Project would include the construction and subsequent operation of two Costco warehouse buildings (543,326 square feet and 1,201,726 square feet, respectively) totaling approximately 1,745,052 square feet. The Proposed Project would also include circulation, parking, and utility improvements.

The Proposed Project meets the definition of a "Project" per California Water Code sections 10910 through 10915, as established by SB 610 in 2001, thus requiring the preparation of this WSA.

## Potable and Recycled Water Demands and Supply Availability

Projected water demands for buildout of the Proposed Project total approximately 158 acre-feet per year (af/yr) of which about approximately 114 af/yr is industrial demand, approximately 29 af/yr is irrigation demand, and approximately 15 af/yr is unaccounted-for water.

It is anticipated that the Proposed Project, if approved by the City, would be served from the City's existing and future portfolio of water supplies. The inclusion of existing and planned future water supplies is specifically allowed by the Water Code:

*Water Code section 10631(b): Identify and quantify, to the extent practicable, the existing and planned*

Since recycled water infrastructure may not be initially available to deliver recycled water to the Proposed Project, potable water supplies may be used in the interim period before recycled water becomes available to meet the non-potable water demands associated with the initial phases of the Proposed Project.

Proponents of the Proposed Project are expected to provide their proportionate share of required funding to the City for the acquisition, treatment and delivery of treated potable and recycled water supplies to the Proposed Project area.

Pursuant to California Water Code Section 10910(c)(4), and based on the technical analyses described in this WSA, this WSA demonstrates that the City's existing and additional planned future water supplies are sufficient during normal years. However, during a single dry year or a multiple dry year period, the City may experience a water supply shortfall. To close the gap between supply and demand, the City will need to implement its Water Shortage Contingency Plan to reduce water demands and rely more heavily on groundwater and proposed future supply projects.

As described in this WSA and the City's 2020 Urban Water Management Plan (UWMP), these findings are primarily due to projected reduced reliability of the City's Central Valley Project (CVP) supplies and South San Joaquin Irrigation District (SSJID) supplies in dry years. As noted in Section 6.5 of this WSA, the reliability of the City's surface water supply from SSJID has been significantly impacted by the 2018 Bay-Delta Water Quality Control Plan. Normal year allocations of the City's water supply from SSJID are assumed to be 100 percent of the City's contractual entitlement; however, water supply may be 56 to 76 percent of contractual entitlement during any single dry year, and 56 to 100 percent of contractual entitlement during multiple dry years. The water supply projections in single dry and multiple dry years include uncertainties that are summarized in Section 7.2.

## Determination of Water Supply Sufficiency

As described in Section 7, water demand within the City's water service area is not expected to exceed the City's supplies at Buildout under normal hydrologic conditions if the City is able to fully implement its future planned projects, which include Aquifer Storage and Recovery Program Expansion, Recycled Water Distribution Network and Exchange Program for additional Central Valley Project water supplies, and recycled water distribution for non-potable use. During a single dry year or a multiple dry year period, the City must depend more heavily on water conservation efforts, groundwater, and the proposed future supply projects to overcome the gap between supply and demand. Investments in wet year water supplies will also be needed to refill storage in Semitropic and expand the City's ASR program. Delays in implementing the proposed future water supply projects could result in greater water supply shortages and the need for additional water conservation to meet demands.

The dry year shortfalls are based on water supply and demand projections with numerous uncertainties and the situation is dynamic as discussed in Section 7 of the 2020 UWMP and Section 7 of this WSA. The City continues to work on strategies and actions to address the projected water supply shortfall. The City's strategies and actions include the implementation of demand management measures as part of its water conservation program, consideration of net neutral policies to improve water use efficiency community-wide, and implementation of the future water supply projects described above and in this WSA.

# 1.0 INTRODUCTION

## 1.1 Legal Requirement for Water Supply Assessment

California Senate Bill 610 (SB 610) amended state law, effective January 1, 2002, to improve the link between information on water supply availability and certain land use decisions made by cities and counties. SB 610 sought to promote more collaborative planning between local water suppliers and cities and counties. It requires detailed information regarding water availability to be provided to the city and county decision-makers prior to approval of specified large development projects. The purpose of this coordination is to ensure that prudent water supply planning has been conducted, and that planned water supplies are adequate to meet existing demands, anticipated demands from approved projects and tentative maps, and the demands of proposed projects.

SB 610 amended California Water Code sections 10910 through 10915 (inclusive) to require land use lead agencies to:

- Identify any public water purveyor that may supply water for a proposed development project; and
- Request a Water Supply Assessment (WSA) from the identified water purveyor.

The purpose of the WSA is to demonstrate the sufficiency of the purveyor's water supplies to satisfy the water demands of the proposed project, while still meeting the water purveyor's existing and planned future uses. Water Code sections 10910 through 10915 delineate the specific information that must be included in the WSA.

## 1.2 Need for and Purpose of Water Supply Assessment

The purpose of this WSA is to perform the evaluation required by Water Code sections 10910 through 10915 in connection with the City of Tracy's (City) proposed Tracy Costco Depot Project (Proposed Project). It is not to reserve water, or to function as a "will serve" letter or any other form of commitment to supply water (see Water Code section 10914). The provision of water service will continue to be undertaken in a manner consistent with applicable City policies and procedures, consistent with existing law.

## 1.3 Water Supply Assessment Preparation, Format and Organization

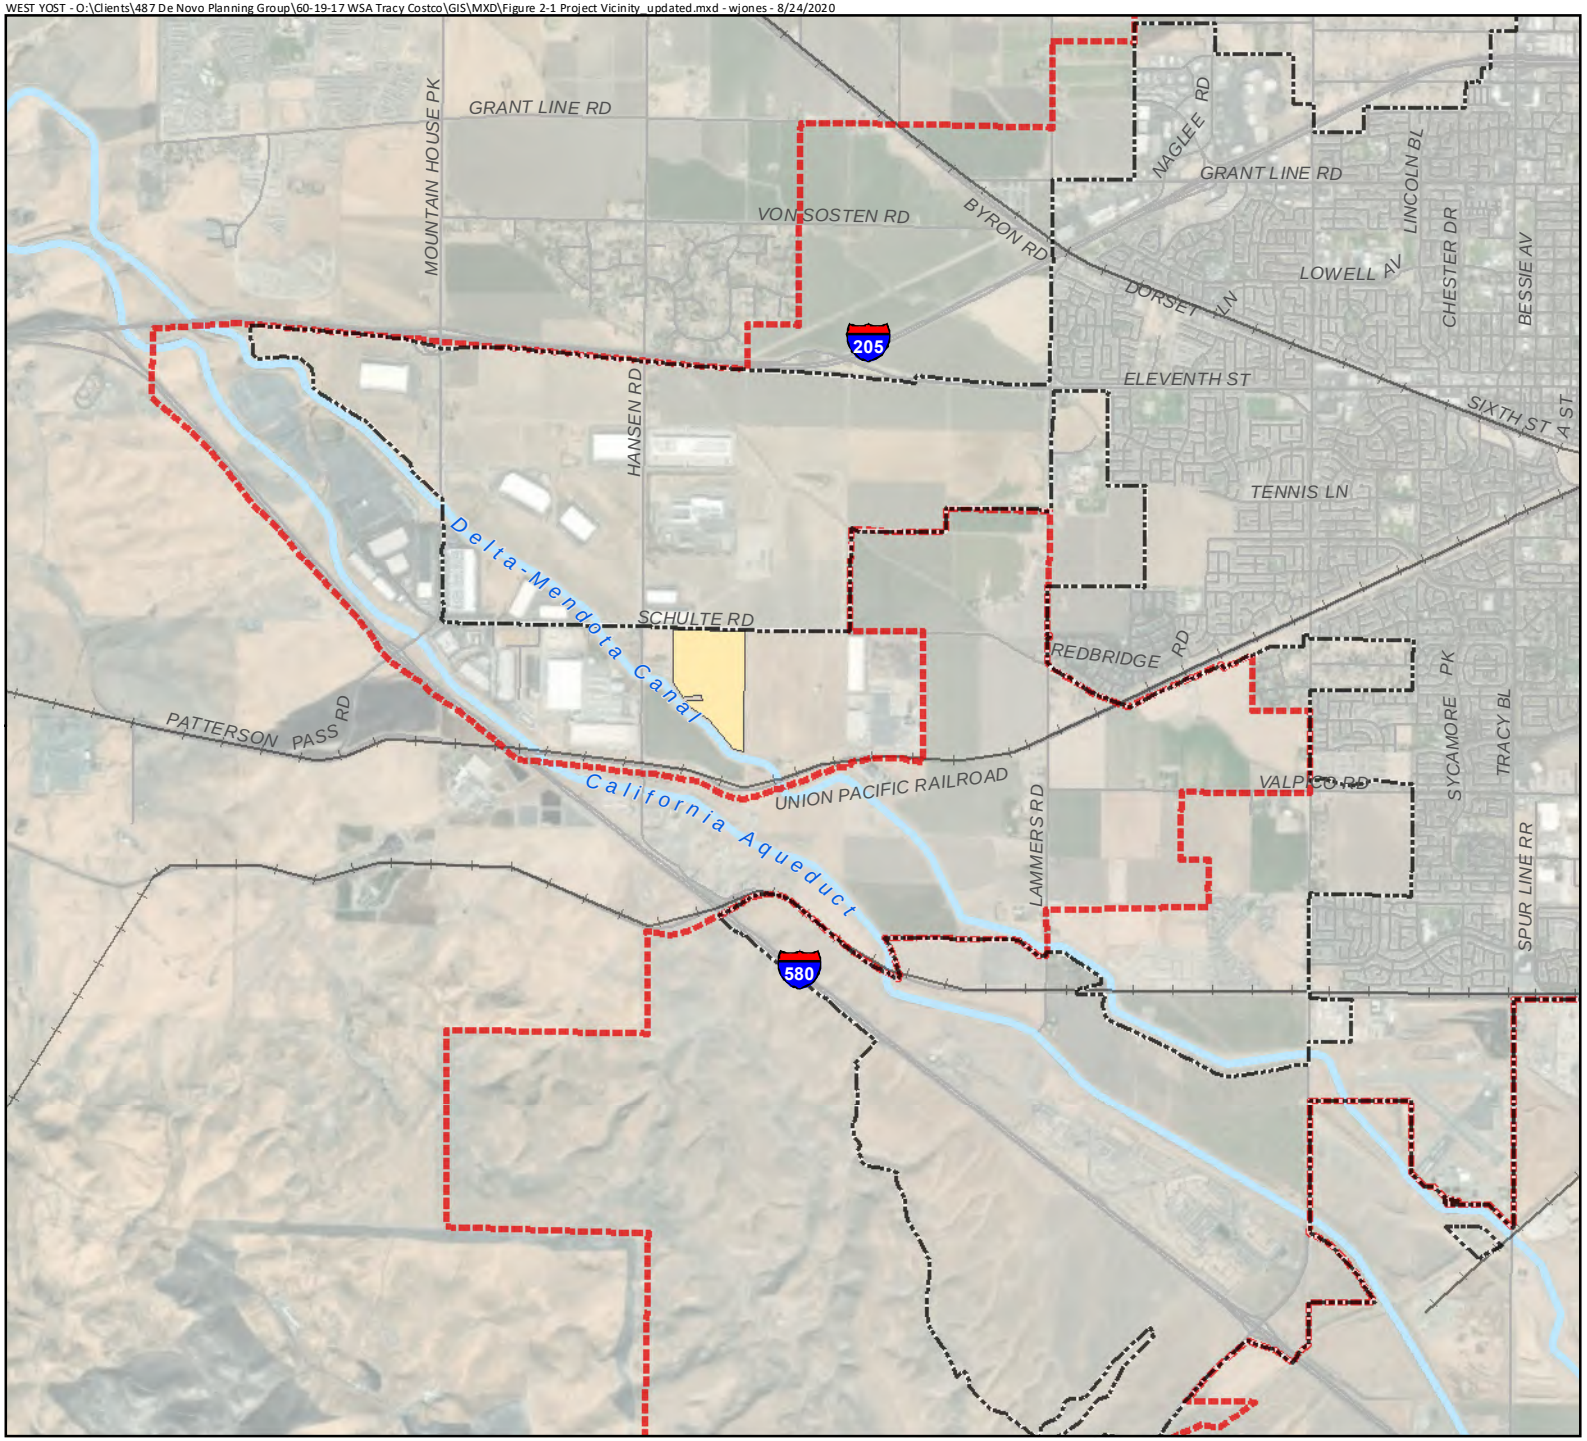
The format of this WSA is intended to follow Water Code sections 10910 through 10915 to clearly delineate compliance with the specific requirements for a WSA. The WSA includes the following sections:

- Section 1: Introduction
- Section 2: Description of Proposed Project
- Section 3: Required Determinations
- Section 4: City of Tracy Water Service Area
- Section 5: City of Tracy Water Demands
- Section 6: City of Tracy Water Supplies
- Section 7: Determination of Water Supply Sufficiency Based on the Requirements of SB 610
- Section 8: Water Supply Assessment Approval Process
- Section 9: References

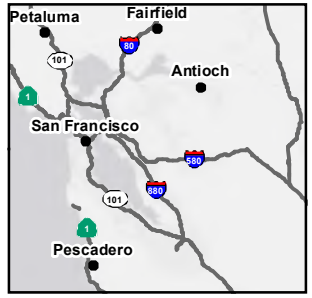
Relevant citations of Water Code sections 10910 through 10915 are included throughout this WSA in *italics* to demonstrate compliance with the specific requirements of SB 610.

# 2.0 DESCRIPTION OF PROPOSED PROJECT

## 2.1 Proposed Project Location



The Proposed Project is located in the City of Tracy's (City) Sphere of Influence (SOI) and includes approximately 103 acres of land located at 16000 West Schulte Road in unincorporated San Joaquin County, California (see Figure 2-1). A proposed site plan for the Proposed Project is shown on Figure 2-2. If approved, the Proposed Project area would be annexed into the City.



The Proposed Project area has a City land use designation of "Industrial" and is surrounded by existing and future warehouse distribution and other industrial uses to the north (within the Cordes Ranch Specific Plan Area, located in the City of Tracy), vacant agricultural land within unincorporated San Joaquin County to the east, the Delta Mendota Canal and agricultural land within unincorporated San Joaquin County to the south, and a rural residence, CalFire station, and Delta Mendota Canal to the west (within unincorporated San Joaquin County).

## 2.2 Proposed Land Uses and Acreages

The Proposed Project would include the construction and subsequent operation of two Costco warehouse buildings (543,326 square feet [sf] and 1,201,726 sf, respectively) totaling approximately 1,745,052 sf on the 103-acre project site. The Proposed Project would also include the required circulation, parking, and utility improvements. Proposed land uses for the Proposed Project include 87.6 acres for industrial use and 15.4 acres for irrigation use.

## 2.3 Projected Water Demand

Water demand for the Proposed Project has been estimated based on water use assumptions from the City's WSMP Update. Table 2-1 below contains a summary of the Proposed Project's water use factors and projected potable water use. Potable water was assumed to be used to meet all the Proposed Project's water demands. This is because until recycled water infrastructure is constructed, potable water supplies may be used to meet non-potable water demands within the Proposed Project area.

**Table 2-1. Estimated Annual Water Demand for the Proposed Project**

| Land Use Designation | Total Area, gross acres[(a)] | Potable Water Use Area, acres[(b)] | Landscaped Area, acres[(c)] | Unit Potable Water Use Factors[(d)], af/ac/yr | Annual Potable Water Use, af/yr |
|---|---|---|---|---|---|
| Industrial | 103.0 | 87.6 | - | 1.3 | 114 |
| Irrigation Demand | — | — | 15.4 | 1.9 | 29 |
| UAFW[(e)] | — | — | — | — | 15 |
| **Total** | **103.0** | **87.6** | **15.4** | — | **158** |

(a) Data provided by City staff.
(b) Consistent with assumptions in the WSMP Update (October 2021 Draft Report); 85 percent of gross acres are assumed to use potable water.
(c) Consistent with assumptions in the WSMP Update; 15 percent of gross acres are assumed to be landscaped.
(d) Based on the WSMP Update.
(e) Unaccounted-for water (UAFW) is equal to 9.6 percent.

As shown above, projected water demands for buildout of the Proposed Project total approximately 158 af/yr of which about approximately 114 af/yr is industrial demand, approximately 29 af/yr is irrigation demand, and approximately 15 af/yr is unaccounted-for water.

As described further in Section 3.4, the proposed project's water demand was included in the City's 2020 UWMP as a future projected water demand.

## 2.4 Projected Water Supply

Water demands for the Proposed Project will be served using the City's existing and future portfolio of water supplies. The inclusion of existing and planned future water supplies is specifically allowed by the Water Code:

> *Water Code section 10631(b): Identify and quantify, to the extent practicable, the existing and planned sources of water available to the supplier over the same five-year increments described in subdivision (a).*

Proponents of the Proposed Project will provide their proportionate share of required funding to the City for the acquisition and delivery of treated potable and recycled water supplies to the Proposed Project area.

Recycled water infrastructure will need to be constructed to deliver recycled water supplies to the Proposed Project. The City's Water System Master Plan, currently being updated, herein referred to as the WSMP Update, included recommended capital improvement projects for the development of the

City's recycled water system. In 2015, the City was awarded a Proposition 84 grant from the California Department of Water Resources (DWR) to fund construction of recycled water distribution facilities. Construction of these facilities is nearly complete. In March 2019, the City received an amended order from the State Water Resources Control Board (SWRCB) approving the change in place of use of its treated wastewater. The order allows for the City to change the point of discharge and place of use of treated wastewater by a reduction in discharge to Old River and use the treated wastewater for industrial and irrigation purposes within the service areas of the City's SOI, Byron Bethany Irrigation District (BBID) within the City's SOI, and West Side Irrigation District (WSID).

# 3.0 REQUIRED DETERMINATIONS

## 3.1 Does SB 610 apply to the Proposed Project?

*10910 (a) Any city or county that determines that a project, as defined in Section 10912, is subject to the California Environmental Quality Act (Division 13 (commencing with Section 21000) of the Public Resources Code) under Section 21080 of the Public Resources Code shall comply with this part.*

*10912 (a) "Project" means any of the following:*

*(1) A proposed residential development of more than 500 dwelling units.*

*(2) A proposed shopping center or business establishment employing more than 1,000 persons or having more than 500,000 square feet of floor space.*

*(3) A proposed commercial office building employing more than 1,000 persons or having more than 250,000 square feet of floor space.*

*(4) A proposed hotel or motel, or both, having more than 500 rooms.*

*(5) A proposed industrial, manufacturing, or processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area.*

*(6) A mixed-use project that includes one or more of the projects specified in this subdivision.*

*(7) A project that would demand an amount of water equivalent to, or greater than, the amount of water required by a 500-dwelling unit project.*

Based on the following facts, SB 610 does apply to the Proposed Project.

- The City of Tracy has determined that the Proposed Project is subject to the California Environmental Quality Act (CEQA) and that an Environmental Impact Report (EIR) is required.
- The Proposed Project, with more than 40 acres of industrial land use, meets the definition of a "Project" as specified in Water Code section 10912(a) paragraph (5) as defined for an industrial development.

The Proposed Project has not been the subject of a previously adopted WSA and has not been included in an adopted WSA for a larger project. Therefore, according to Water Code section 10910(a), a WSA is required for the Proposed Project.

## 3.2 Does SB 221 apply to the Proposed Project?

In 2001, SB 221 amended State law to require that approval by a city or county of certain residential subdivisions requires an affirmative written verification of sufficient water supply. Per California Government Code section 66473.7(a)(1), a subdivision means a proposed residential development of more than 500 dwelling units. As the Proposed Project does not include residential development, it is not subject to the requirements of SB 221.

## 3.3 Who is the Identified Public Water System?

> *10910(b) The city or county, at the time that it determines whether an environmental impact report, a negative declaration, or a mitigated negative declaration is required for any project subject to the California Environmental Quality Act pursuant to Section 21080.1 of the Public Resources Code, shall identify any water system that is, or may become as a result of supplying water to the project identified pursuant to this subdivision, a public water system, as defined by Section 10912, that may supply water for the project*
>
> *10912 (c) "Public water system" means a system for the provision of piped water to the public for human consumption that has 3,000 or more service connections…*

As shown on Figure 2-1, the Proposed Project is located within the City's General Plan Sphere of Influence (SOI), just outside of the Tracy City Limits. The City's water system service area includes all areas within the City Limits and the General Plan SOI as they are annexed into the City. Therefore, the City is the identified public water system for the Proposed Project.

## 3.4 Does the City have an adopted Urban Water Management Plan (UWMP) and does the UWMP include the projected water demand for the Proposed Project?

> *10910(c)(1) The city or county, at the time it makes the determination required under Section 21080.1 of the Public Resources Code, shall request each public water system identified pursuant to subdivision (b) to determine whether the projected water demand associated with a proposed project was included as part of the most recently adopted urban water management plan adopted pursuant to Part 2.6 (commencing with Section 10610).*

The City's most recently adopted UWMP (2020 UWMP) was adopted by the Tracy City Council in June 2021 and is incorporated by reference into this WSA[1]. The 2020 UWMP included water demand projections for current water demands within the City (baseline demand) and anticipated water demands associated with future development projects and planning areas within the City's SOI through 2045. The Proposed Project was included in the demand projections as a future service area in the 2020 UWMP.

The City's ability to meet the projected water demands for the Proposed Project, as defined in the 2020 UWMP, is described in Section 7 of this WSA.

[1] City of Tracy 2020 Urban Water Management Plan, prepared by Erler & Kalinowski, Inc., June 2021.

# 4.0 CITY OF TRACY WATER SERVICE AREA

## 4.1 Water Service Area

The City of Tracy is located in San Joaquin County, California, about 68 miles south of Sacramento and 60 miles east of San Francisco. The existing incorporated area of the City encompasses approximately 22 square miles. The City's General Plan includes the area outside of the City limits that the City expects to annex and urbanize in the future. It is the expected physical limit of the City based on the most current information. During the City's recent General Plan update process and in response to Local Agency Formation Commission (LAFCo) policies established in 2007, revisions to the City's SOI were made to more accurately reflect locations where the City may grow in the future and locations where no urban growth is expected. The recently adopted revised SOI encompasses an area of approximately 42 square miles and is 20 square miles larger than the current City limits.

The City's water service area is coterminous with the City limits. As future developments within the SOI, but outside the City Limits, are approved, they will be annexed into the City and served by the City water system. Figure 2-1 illustrates the current City Limits and the SOI. The Proposed Project is located outside the City's existing City Limits, but within the SOI.

## 4.2 Population

The State of California Department of Finance (DOF) population estimate for the City as of January 1, 2020 was 95,931 people[2]. In 2020, the City also served 118 residences in the Larch Clover County Services District (CSD), and the average persons per household factor was 3.51 (per DOF). Therefore, the City's total population served in 2020 was estimated to be 96,345.

Future population projections for the City are described in the 2020 UWMP and are summarized as follows. Population growth was rapid in the City over the 15-year period of 1990 through 2005, with the City growing by 139 percent. Between 2005 and 2020, however, growth has slowed relative to historical rates; population increased approximately 68 percent during this 15-year period. The reduction in growth rate has likely been caused by a combination of economic forces, such as the economic downturn of 2008 through 2011, and measures taken by the City to limit growth. In 1987, the City adopted a residential Growth Management Ordinance (GMO), which was amended in 2000 by the voter-initiative Measure A. The objective of the GMO and Measure A is to achieve a steady and orderly growth rate that allows for the adequate provision of services and community facilities and includes a balance of housing opportunities. Under the GMO, builders must obtain a Residential Growth Allotment (RGA) to secure a residential building permit. The GMO limits the number of RGAs and building permits to an average of 600 housing units per year for market-rate housing, with a maximum of 750 units in any single year, although there are exceptions for affordable housing and certain active adult residential uses (General Plan, 2011).

The population estimates for 2020 through 2045 presented in the 2020 UWMP are projected using the methodology used in the City's WSMP Update, which is currently in draft form. It incorporates assumptions about the number of dwelling units for each proposed development and planning area at

[2] State of California, Department of Finance, Report E-5 Population Estimates for Cities, Counties, and the State, 2011-2020, with 2010 Benchmark, released May 1, 2020.

buildout, an assumed number of people per dwelling unit (people/du), and the timing of planned development over this time frame.

Table 4-1 shows the City's projected population in five-year increments to the year 2045.

**Table 4-1. City of Tracy Historical and Projected Population**

| Population | Year | Population |
|---|---|---|
| Historical | 1990 | 32,827 |
| | 1995 | 44,906 |
| | 2000 | 57,298 |
| | 2005 | 78,613 |
| | 2010 | 83,312 |
| | 2015 | 85,707 |
| | 2020 | 96,345 |
| Projected | 2025 | 109,900 |
| | 2030 | 120,367 |
| | 2035 | 130,833 |
| | 2040 | 141,300 |
| | 2045 | 166,700 |

*Source: City of Tracy 2020 UWMP, Table 3-1 Current and Projected Service Area Population, June 2021; includes residents served by the City in the Larch Clover CSD.*

## 4.3 Climate

Spring, summer, and fall are generally hot in the City, with temperatures often reaching over 100 degrees Fahrenheit on summer days. The City's winters are usually mild, although the dense "Tule fog" can last for weeks. Annual rainfall averages 9.9 inches and is generally confined to the wet season from late October to early May. The average reference evapotranspiration (ETo) for the region is 48.4 inches.

Table 4-2 summarizes the City's average ETo, temperature, and rainfall data.

**Table 4-2. City of Tracy Climate Data**

| | Jan | Feb | Mar | Apr | May | Jun | Jul | Aug | Sep | Oct | Nov | Dec | Annual Total or Average |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Average $ET_o$, inches | 1.0 | 1.5 | 2.9 | 4.5 | 6.1 | 7.3 | 7.9 | 6.7 | 5.3 | 3.2 | 1.3 | 0.7 | 48.4 |
| Average Maximum Temperature, °F | 54.1 | 61.0 | 66.7 | 73.1 | 80.7 | 88.0 | 93.6 | 92.1 | 87.9 | 78.5 | 64.9 | 54.7 | 74.6 |

# 5.0 CITY OF TRACY WATER DEMANDS

> *10910(c)(2) If the projected water demand associated with the proposed project was accounted for in the most recently adopted urban water management plan, the public water system may incorporate the requested information from the urban water management plan in preparing the elements of the assessment required to comply with subdivisions (d), (e), (f), and (g).*

The descriptions provided below for the City's water demands have been taken, for the most part, from the 2020 UWMP, which was adopted in June 2021. Supplemental information from other available reports has been included to provide the most recent data available and to meet the specific requirements of SB 610.

## 5.1 Historical and Existing Water Demand

The City's water demand has increased significantly in the last 30 years. In 1986, the City's water demand was 8,104 af/yr and by 2007 the City's water demand had increased to 19,176 af/yr. In recent years, the City's water demand has decreased as a result of the economic downturn of 2008 through 2011 and water use reductions in response to recent drought conditions. Water demands have rebounded (increased) somewhat in recent years with the end of drought conditions and increased development activity. Table 5-1 shows the City's water demand (based on water production) from 2012 to 2020.

**Table 5-1. Historical Potable Water Demand**

| Condition | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 |
|---|---|---|---|---|---|---|---|---|---|
| Total Water Demand, af/yr | 18,052 | 18,587 | 16,213 | 14,041 | 15,360 | 18,160 | 17,420 | 17,672 | 19,527 |

*Source: City of Tracy 2020 UWMP, Table 4-2 Current and Historical Potable Water Demand and Population, June 2021.*

## 5.2 Future Water Demand

The City's water demand is anticipated to continue to increase as approved projects build out and new developments are approved and constructed in accordance with the City's General Plan within the City's water service area. However, as discussed above, the rate of growth within the City's water service area has slowed as a result of the GMO and the slow economic recovery from the economic downturn between 2008 and 2011. Hence, water demands are not anticipated to increase as rapidly as they have in past years. Buildout for the City is not anticipated within the planning horizon of this WSA. However, in the 2020 UWMP and for the purposes of this WSA, buildout is assumed to occur in 2045 to be conservative in the water reliability analysis.

The 2020 UWMP projected water demands are shown in Table 5-2. The City's projected future water demand was determined based on adopted potable water use factors for various land uses, which were developed based on historical metered water use data, and anticipated timing of future development projects. Buildout of the Proposed Project is included in the 2025 (near-term) water demand projection. A detailed explanation of the adopted demand projection methodology is provided in the City's WSMP Update.

The water demand projections include consideration for reduced future water use as a result of new building codes, improved water use efficiency, and implementation of water conservation measures. The projections also include savings from passive conservation which refers to water savings resulting from actions and activities that do not depend on direct financial assistance or educational programs from the City. These savings result primarily from: (1) the natural replacement of existing plumbing fixtures with water-efficient models required under current plumbing code standards, and (2) the installation of water-efficient fixtures and equipment in new buildings and retrofits as required under CALGreen Building Code Standards.

**Table 5-2. Projected Water Demand**

| Condition | 2025 | 2030 | 2035 | 2040 | 2045 |
|---|---|---|---|---|---|
| Potable Water Demand, af/yr | 20,509 | 23,100 | 25,738 | 28,403 | 33,079 |
| Recycled Water Demand, af/yr | 1,000 | 2,067 | 3,133 | 4,200 | 6,300 |
| **Total Water Demand, af/yr** | **21,509** | **25,167** | **28,871** | **32,603** | **39,379** |

*Source: City of Tracy 2020 UWMP, Table 4-8 Gross Water Use, June 2021.*

## 5.3 Dry Year Water Demand

The City currently has a water conservation program in place, as described in Chapter 9 of the 2020 UWMP. The projected future water demand presented in Table 5-2 includes continued implementation of the City's existing water conservation program demand management measures and is based on future normal hydrologic years. In the 2020 UWMP, the additional water conservation which may occur in single dry or multiple dry years was not assumed to happen. This was a conservative assumption as additional water conservation would likely occur as a result of the City's implementation of additional water conservation measures as outlined in the City's Water Shortage Contingency Plan[3] in response to multiple dry years or other water supply shortages. The City's Water Shortage Contingency Plan includes shortage response actions to reduce water demand and manage supply for water shortage conditions of up to and greater than 50 percent.

As shown in Table 5-1, the City's 2015 demand was significantly lower than 2014 demand in response to the Governor's April 2015 Executive Order B-29-15 mandating 25 percent water conservation statewide. To reduce water use by 25 percent statewide, the SWRCB adopted a regulation which placed each urban water supplier into one of eight tiers which were assigned a conservation standard, ranging between 4 percent and 36 percent. Each month, the SWRCB compared every urban water suppliers' water use with their use for the same month in 2013 to determine if they were on track for meeting their conservation standard. The City was initially placed into Tier 7 with a water conservation standard of 28 percent as compared to 2013 use (the City's conservation standard was reduced to 25 percent in early 2016).

In response, City Council authorized the implementation and amendment of the City's Phase III and IV water restrictions in June 2015 (as defined in Chapter 11.28 of the Tracy Municipal Code) to meet SWRCB emergency drought regulations described above. The City's water conservation efforts and results are an example of the City's ability to implement its Water Shortage Contingency Plan and reduce water

[3] The City's Water Shortage Contingency Plan is incorporated into the Water Management Chapter of the Tracy Municipal Code Chapter 11.28 and Appendix H of the City's 2020 UWMP.

demands in the event of an emergency water supply shortage. In May 2016, the City's water demand was 32.6 percent less than in May 2013, and the City's cumulative savings from June 2015 to May 2016 was 27.2 percent as compared to 2013, indicating the responsiveness of the City's residents to the call for water conservation[4].

As described above, in the 2012-2016 statewide drought, the City met (exceeded) its water conservation goals of 25 percent. For purposes of this WSA and to be conservative, the City assumes that dry year potable water demand is the same as normal year demand.

[4] SWRCB May 2016 Supplier Conservation Compliance (data from June 21, 2016), SWRCB Water Conservation Portal – Conservation Reporting.

# 6.0 CITY OF TRACY WATER SUPPLIES

*10910(c)(2) If the projected water demand associated with the proposed project was accounted for in the most recently adopted urban water management plan, the public water system may incorporate the requested information from the urban water management plan in preparing the elements of the assessment required to comply with subdivisions (d), (e), (f) and (g).*

*10910(d)(1) The assessment required by this section shall include an identification of any existing water supply entitlements, water rights, or water service contracts relevant to the identified water supply for the proposed project, and a description of the quantities of water received in prior years by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), under the existing water supply entitlements, water rights, or water service contracts*

*10910(d)(2) An identification of existing water supply entitlements, water rights, or water service contracts held by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), shall be demonstrated by providing information related to all of the following:*

*(A) Written contracts or other proof of entitlement to an identified water supply.*

*(B) Copies of a capital outlay program for financing the delivery of a water supply that has been adopted by the public water system.*

*(C) Federal, state, and local permits for construction of necessary infrastructure associated with delivering the water supply.*

*(D) Any necessary regulatory approvals that are required in order to be able to convey or deliver the water supply.*

*10910(e) If no water has been received in prior years by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), under the existing water supply entitlements, water rights, or water service contracts, the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), shall also include in its water supply assessment pursuant to subdivision (c), an identification of the other public water systems or water service contract-holders that receive a water supply or have existing water supply entitlements, water rights, or water service contracts, to the same source of water as the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), has identified as a source of water supply within its water supply assessments.*

The Proposed Project, if approved by the City, is anticipated to be served from City's existing and future portfolio of water supplies. The inclusion of existing and planned future water supplies is specifically allowed by the Water Code:

*Water Code section 10631(b): Identify and quantify, to the extent practicable, the existing and planned sources of water available to the supplier over the same five-year increments described in subdivision (a).*

The water supply for the Proposed Project will have the same water supply reliability and water quality as the water supply available to the City's other existing and future water customers. Proponents of the Proposed Project will provide their proportionate share of required funding to the City for the acquisition and delivery of treated potable and recycled water supplies to the Proposed Project area.

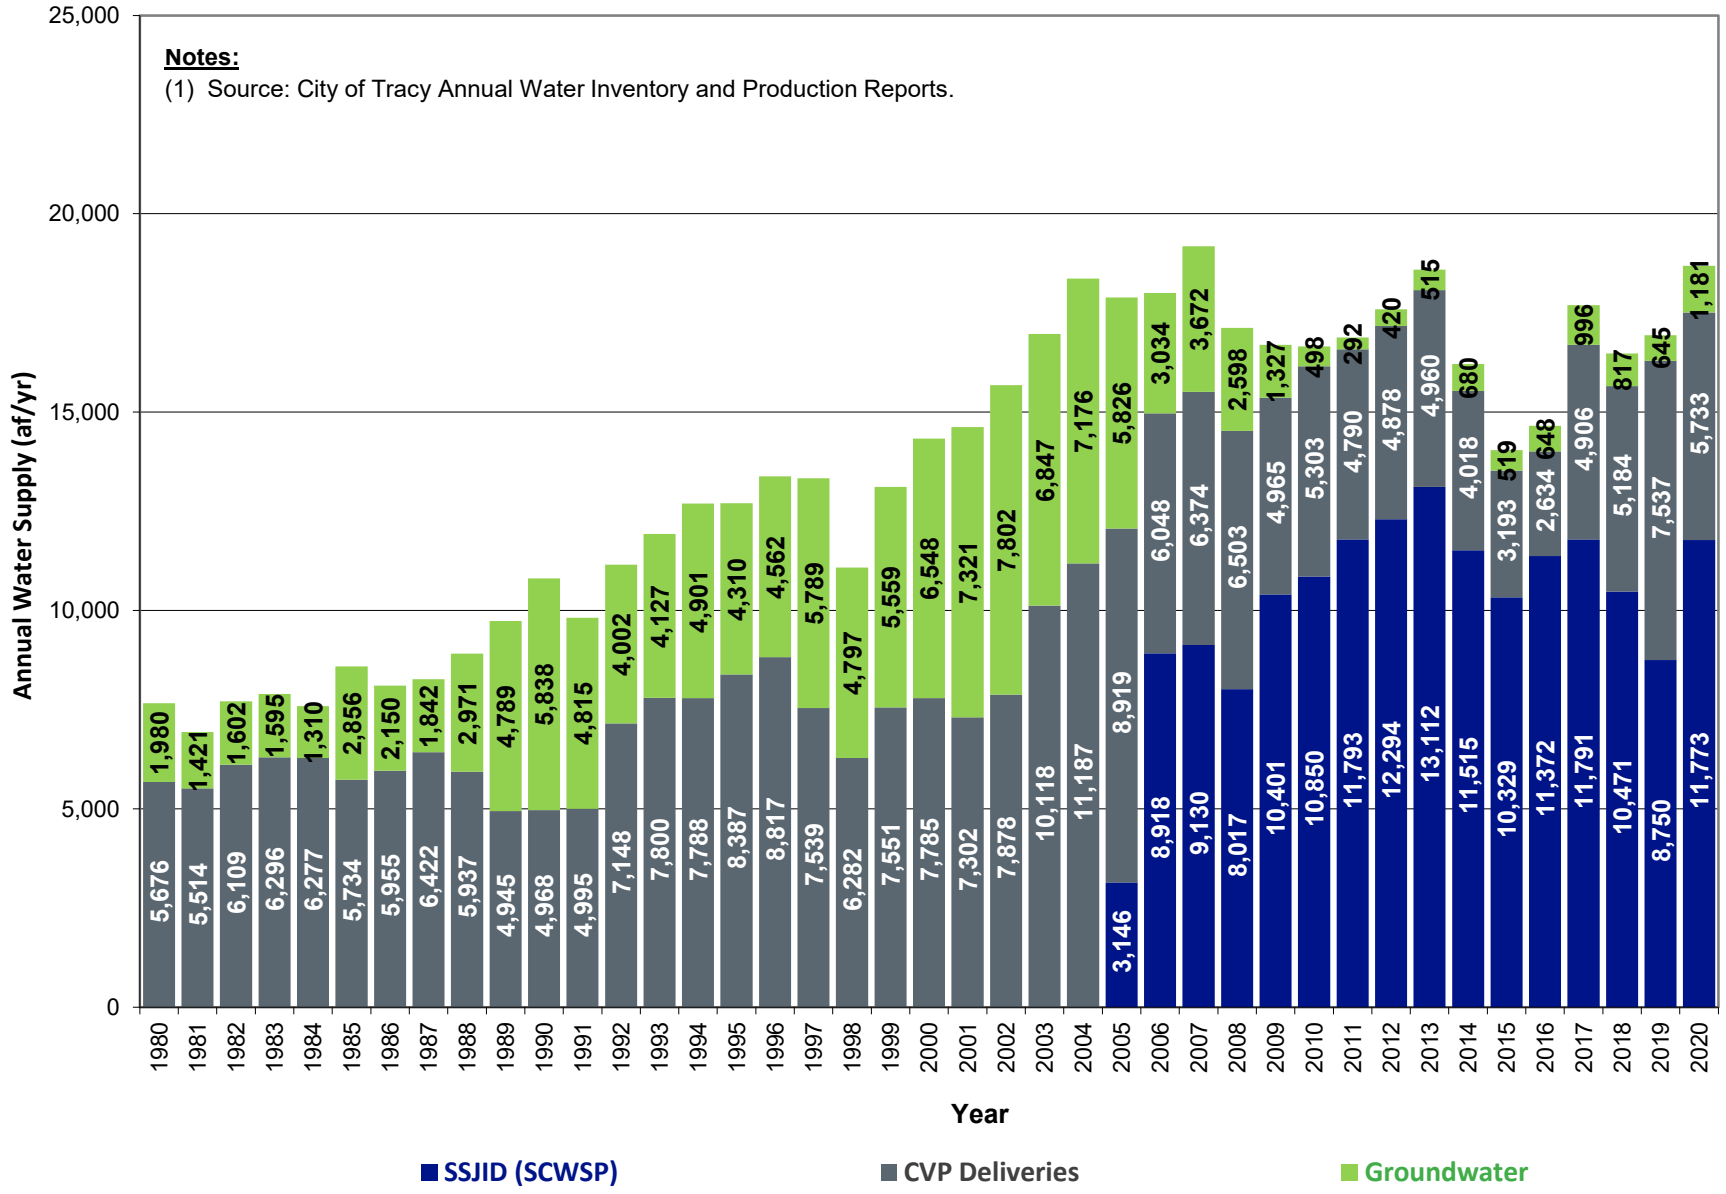
The water supplies needed to serve the Proposed Project (together with existing water demands and planned future uses) are predominantly described in the 2020 UWMP. Therefore, the descriptions provided below for the City's water supplies have been taken, for the most part, from the 2020 UWMP, which was adopted in June 2021. Supplemental information from other available reports, including the City's WSMP Update, has also been included to provide the most recent data available and to meet the specific requirements of SB 610.

## 6.1 Existing Potable Water Supplies

The City currently receives water from the following sources:

- Untreated surface water from the Central Valley Project (CVP) via the Delta-Mendota Canal (DMC) (treated at the City's John Jones Water Treatment Plant);
- Surface water from the Stanislaus River via the South County Water Supply Project (SCWSP) (delivered by the South San Joaquin Irrigation District [SSJID]);
- Groundwater pumped from nine groundwater wells located within the City; and,
- Untreated surface water from the BBID pre-1914 rights (treated at the City's John Jones Water Treatment Plant).

Also, the City has entered into an agreement with the Semitropic Water Storage District for storage of water supplies for use in dry years and has implemented an Aquifer Storage and Recovery (ASR) Program to allow for injection of surface water supplies into the underlying groundwater basin for storage and later extraction.



Each of these existing supplies is described below. Summary tables listing the City's existing and additional planned future water supplies, and historical and anticipated future quantities, are provided in Section 6.5, following the discussion of the City's additional planned future water supplies. Figure 6-1 shows the City's historical use of these existing water supplies.

### *6.1.1 Central Valley Project Water via the Delta-Mendota Canal*

The City has contractual entitlements for Central Valley Project (CVP) water as detailed below. In the aggregate, the City's contractual entitlement to the municipal and industrial (M&I) reliability CVP water and assignments of agricultural (Ag) reliability water CVP water from BCID and WSID are referred to as the City's "Existing Contract" with the United States Bureau of Reclamation (USBR). The total quantity of CVP water available to the City under its Existing Contract is 20,000 af/yr (10,000 af/yr of M&I-reliability water and 10,000 af/yr of Ag-reliability water).

The City's CVP water supplies are treated at the City's John Jones Water Treatment Plant (JJWTP), which was originally constructed in 1979, expanded in 1988, and then expanded again in 2008. The JJWTP is located just north of the DMC in the southern portion of the City. With the latest plant expansion, the current treatment capacity of the JJWTP is 30 million gallons per day (mgd) which is sufficient to treat all of the City's CVP water supplies.

## Figure 6-1. City of Tracy Historical Potable Water Supplies

The City also treats and serves CVP water purchased by others. Over the period 2010 through 2018, an average of approximately 630 af/yr of water from the Plain View Water District's (now BBID's) USBR allocation was treated at the JJWTP and delivered to the Patterson Pass Business Park through the City's water distribution system. A comparable quantity of BBID water is anticipated to be treated and delivered annually to the Patterson Pass Business Park in the future. Neither the water supply nor the demand for Patterson Pass Business Park are included in the City supply and demand estimates because the water supply is BBID's, not the City's, and the City only provides water treatment, delivery and billing services on a contractual basis for the Patterson Pass Business Park; the City does not manage either the supply or the demand.

#### 6.1.1.1 Municipal and Industrial Reliability Contract

In July 1974, the City entered into a 40-year contract with the United States Bureau of Reclamation (USBR) for an annual entitlement of 10,000 af/yr of surface water from the CVP via the DMC. The original USBR contract expired in 2014; however, since December 2013, the City and USBR have entered into a series of two-year interim renewal contracts to provide water service to the City while the terms of the long-term contract renewal were negotiated. In November 2021, the Tracy City Council approved a new long-term contract with USBR which became effective on December 1, 2021. The new contract is for 20,000 af/yr, which aggregates the City's M&I-reliability supplies and Ag-reliability supplies (discussed below) from the CVP. The new contract does not have a termination date and would continue as long as water is available and delivered.

#### 6.1.1.2 Agricultural Reliability Contract

In 2004, the USBR approved the assignment of 5,000 af/yr of Ag-reliability CVP contract entitlement to the City from the Banta Carbona Irrigation District (BCID). Concurrently, the USBR approved the assignment of 2,500 af/yr of Ag-reliability CVP contract entitlement water to the City from WSID, with the option to purchase an additional 2,500 af/yr of CVP contract entitlement from the WSID. In December 2013, the City and WSID approved the additional assignment in which the City's current assignment of WSID CVP water is 5,000 af/yr.

#### 6.1.1.3 South-of-Delta Allocations

The City's CVP water supplies are subject to allocations determined by the USBR for 'South-of-Delta' contractors. Historical M&I and Ag allocations for the CVP water supplies are summarized in Table 6-1. Based on the historical record, the City's long-term average allocation of CVP water pursuant to the contract is anticipated to be at least 85 percent of the total entitlement. However, due to recent environmental concerns in the Delta and potential future impacts due to climate change, the normal year reliability of CVP water was assumed to be 75 percent in the 2020 UWMP. In addition, the City conservatively estimated that it will receive 50 percent of its Ag-reliability contractual entitlement in normal water years.[5]

During dry years, a CVP M&I contractor is typically eligible for a minimum shortage allocation equal to 75 percent of adjusted historical use. Per the CVP M&I Water Shortage Allocation Plan, the minimum shortage allocation may be reduced further when the allocation of Ag-reliability water in that year is reduced below 25 percent of contract entitlement. The component of the City's CVP supply that carries

[5] City of Tracy 2020 UWMP, June 2021, Section 7.1.2.1.

Ag-reliability is subject to more significant reductions and is much more dependent on yearly hydrologic conditions than the City's M&I-reliability allocation.

**Table 6-1. Historical Allocations for USBR Central Valley Project Water Supplies**

| Year | M&I Allocation for South of Delta Contractors (% of contract supply unless otherwise noted) | Ag Allocation for South of Delta Contractors (% of contract supply unless otherwise noted) |
|---|---|---|
| 2005 | 100 | 85 |
| 2006 | 100 | 100 |
| 2007 | 75 | 50 |
| 2008 | 75 | 40 |
| 2009 | 60 | 10 |
| 2010 | 75 | 45 |
| 2011 | 100 | 80 |
| 2012 | 75 | 40 |
| 2013 | 70 | 20 |
| 2014 | 50 | 0 |
| 2015 | Public health and safety needs or 25 percent of historical use, whichever is greater | 0 |
| 2016 | 55 percent of historical use | 5 |
| 2017 | 100 percent of contract amount | 100 |
| 2018 | Public health and safety needs or 75 percent of historical use, whichever is greater | 50 |
| 2019 | 100 percent of historical use | 75 |
| 2020 | Public health and safety needs or 70 percent of historical use, whichever is greater | 20 |

#### 6.1.1.4 CVP Water Supply Reliability

In February 2017, new guidelines and procedures went into effect associated with the updated CVP Municipal and Industrial Water Shortage Policy. In general, the policy provides for the following:

- When M&I contractor allocations are at 100 percent, the allocation of M&I water will be based on Contract Total.
- When M&I contractor allocations are below 100 percent, the allocation of M&I water will be based on a contractor's historical use of CVP M&I water.
- An M&I contractor's historical use will be determined by calculating the average quantity of CVP water put to beneficial use within the service area during the last three years of water deliveries that were unconstrained by the availability of CVP water.

The City's reliability assumptions in the 2020 UWMP are sufficiently conservative to adhere to the 2017 guidelines. The City's CVP water single dry year reliability is based on adjusted historical use and provided in its 2020 UWMP, and are assumed as 25 percent for M&I CVP water, and 0 percent for Ag CVP water.

Similarly, the City's CVP water multiple dry year reliability is based on adjusted historical use and provided in its 2020 UWMP and are assumed as 40 percent for M&I CVP water, and 0 percent for Ag CVP water.

### *6.1.2 Surface Water from BBID Pre-1914 Water Rights*

Part of the proposed Tracy Hills Specific Plan area was annexed into the BBID and is entitled to water service from BBID, using BBID's pre-1914 appropriative water rights. This water is delivered to the City via the DMC and is treated at the City's JJWTP before delivery to the Tracy Hills Specific Plan area. The City anticipates that up to 4,500 af/yr of pre-1914 water rights water could be provided by BBID on a year-round basis to serve the Tracy Hills Specific Plan in the BBID service area. However, the volume of water available to the City through this agreement is limited to the demand in the BBID service area portion of the Tracy Hills Specific Plan. The projected potable water demand in this area is estimated to be 3,330 af/yr at Buildout. Because the water supply is based on pre-1914 appropriative rights, the supply is considered to be firm and well-established.

### *6.1.3 Stanislaus River Water*

The City receives Stanislaus River water, in partnership with the cities of Manteca, Lathrop and Escalon, and the SSJID. This partnership constructed the South County Water Supply Project (SCWSP), which consists of the 36 mgd Nick C. DeGroot Water Treatment Plant (DGWTP) near Woodward Reservoir in Stanislaus County and a transmission pipeline to deliver treated surface water to each city. The water supply source for the SCWSP is based on SSJID's senior pre-1914 appropriative water rights to the Stanislaus River, coupled with an agreement with the USBR to store water in New Melones Reservoir.

As part of the SCWSP, the City was initially allocated up to 10,000 af/yr of water based upon SSJID's senior water rights. In 2006, the City entered into a temporary contract with Escalon to purchase Escalon's allocation of 2,015 af/yr of SCWSP supply until Escalon constructs the necessary infrastructure to convey the SCWSP water.[6] In August 2013, SSJID and the Cities of Tracy and Lathrop approved a Lathrop-Tracy Purchase, Sale and Amendment Agreement for the sale of a portion of the City of Lathrop's SCWSP supply and capacity to the City of Tracy. The agreement provides the City with an additional 1,120 af/yr of SCWSP supply and 2 mgd of SCWSP capacity. Thus, the City's current contractual amount of SCWSP water is 13,135 af/yr in total. Once the agreement with Escalon sunsets (anticipated to occur in 2025), the City's contractual allocation will be reduced to 11,120 af/yr. This additional SCWSP supply has the same reliability as the City's original SCWSP supplies.

Treated water deliveries from the SCWSP commenced in July 2005, and deliveries have been essentially uninterrupted since then (see Figure 6-1). Although the City full allocation was available in first few years, deliveries to the City were less than its allocation because the full allocation was not needed. However, in some years since 2009 the City has actually received more than its allocation.

Due to the seniority of the water rights underling the SCWSP, SSJID's pre-1914 appropriative rights to Stanislaus River water, the City has historically assigned a high reliability to SCWSP water. However, in December 2018, the SWRCB released amendments to the Water Quality Control Plan for the San Francisco/Sacramento-San Joaquin Delta Estuary (Bay-Delta Plan Amendment) which included significant changes and could result in significant surface water cutbacks. In its 2020 UWMP, SSJID presented a water reliability analysis assuming that the Bay-Delta Plan Amendment will not be

[6] Escalon Amendment to Tracy- SSJID Water Supply Development Agreement, March 2006.

implemented given its uncertainties. As an SSJID retail agency customer, the City relies on SSJID for the reliability projections for the Stanislaus River water supply. Consistent with SSJID's approach, the City's 2020 UWMP assumes that the Bay-Delta Plan Amendment will not be implemented. However, to fully assess the potential impacts of the Bay-Delta Plan Amendment and better plan for the potential shortfalls, the City conducted a parallel set of reliability analyses assuming that the Bay-Delta Plan Amendment will be implemented and included it as Appendix G of its 2020 UWMP.[7] Uncertainties regarding dry year supply projections are discussed in Section 7.2.

Consistent with the City's 2020 UWMP and for the purposes of this WSA, the City is assumed to receive 100 percent of its SCWSP contractual entitlement in normal years. In future dry years, the City assumed that allocations would be based on the City's contractual entitlement, rather than consumption in a given year. In single dry years, the City expects to receive 76 percent of its SCWSP water supply allocation during 2025, 2030, and 2035 and 56 percent during 2040 and 2045, based on information received from SSJID. In multiple dry years, the City expects to receive 56 to 100 percent of its SCWSP water supply allocation, depending on hydrological conditions. In addition, SCWSP water transferred from Escalon is assumed to be unavailable after 2025.

The anticipated availability and reliability of the SCWSP supply under normal years, single dry years and multiple dry years may be revised based on updated evaluations in conjunction with resolutions of issues associated with the Bay-Delta Plan Amendment. Further, SSJID anticipates the likelihood that more water will be available for local purposes in 2040 based on more efficient water management and urban development displacing irrigated agricultural land uses.[8]

### *6.1.4 Groundwater*

> *10910(f) If a water supply for a proposed project includes groundwater, the following additional information shall be included in the water supply assessment.*
>
> *10910(f)(1) A review of any information contained in the urban water management plan relevant to the identified water supply for the proposed project.*
>
> *10910(f)(2) A description of any groundwater basin or basins from which the proposed project will be supplied. For those basins for which a court or the board has adjudicated the rights to pump groundwater, a copy of the order or decree adopted by the court or the board and a description of the amount of groundwater the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), has the legal right to pump under the order or decree. For basins that have not been adjudicated, information as to whether the department has identified the basin or basins as overdrafted or has projected that the basin will become overdrafted if present management conditions continue, in the most current bulletin of the department that characterizes the condition of the groundwater basin, and a detailed description by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), of the efforts being undertaken in the basin or basins to eliminate the long-term overdraft condition.*
>
> *10910(f)(3) A detailed description and analysis of the amount and location of groundwater pumped by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), for the past five years from any groundwater basin from which the proposed project will be supplied. The*

[7] City of Tracy 2020 UWMP, June 2021, Section 7.1.1.3.

[8] City of Tracy 2020 UWMP, June 2021, Section 7.1.1.2.

*description and analysis shall be based on information that is reasonably available, including, but not limited to, historical use records.*

*A detailed description and analysis of the amount and location of groundwater that is projected to be pumped by the public water system, or the city or county if either is required to comply with this part pursuant to subdivision (b), from any basin from which the proposed project will be supplied. The description and analysis shall be based on information that is reasonably available, including, but not limited to, historical use records.*

*10910(f)(4) An analysis of the sufficiency of the groundwater from the basin or basins from which the proposed project will be supplied to meet the projected water demand associated with the proposed project.*

*A water assessment shall not be required to include the information required by this paragraph if the public water system determines, as part of the review required by paragraph (1), that the sufficiency of groundwater necessary to meet the initial and projected water demand associated with the project was addressed in the description and analysis required by paragraph (4) of subdivision (b) of Section 10631.*

The City's surface water supply is supplemented by local groundwater. The City overlies a portion of the San Joaquin Valley Groundwater Basin-Tracy Subbasin (Tracy Subbasin). The City currently operates nine groundwater wells, with a total extraction capacity of about 18,300 gallons per minute (gpm), or 26 mgd (GEI, 2015). Four wells (Production Wells 1, 2, 3 and 4) are located near the City's JJWTP and pump directly into the JJWTP clearwells, where the groundwater is blended with treated surface water. The other wells (Lincoln Well, Lewis Manor Well (Well 5), Park and Ride Well (Well 6), Ball Park Well (Well 7) and Well 8) are located throughout the City and pump water directly into the distribution system after disinfection. The City's newest well, Well 8, located near the intersection of Tracy Boulevard and 6th Street, was designed as an ASR well, and has been put into service as an ASR well as permitted by the Central Valley Regional Water Quality Control Board. The City's ASR use is described in Section 6.1.5.

#### 6.1.4.1 Basin Description

The City overlies the Tracy Subbasin (Basin; Department of Water Resources [DWR] 5-22.15) of the San Joaquin Valley Groundwater Basin (DWR 5-22). The Tracy Subbasin is not adjudicated, and it is not in a condition of critical overdraft.

The following section describes the Tracy Subbasin, including its water-bearing formations, water levels, and water quality. Much of the following information has been incorporated from the 2020 UWMP. Except where noted, the description of the subbasin is based largely on information provided in the 2003 DWR Bulletin 118, in which the groundwater basin description was last updated in January 2006. The Tracy Subbasin is designated as a medium priority basin under DWR's 2019 Phase 2 Basin Prioritization (DWR, 2019a).

The Tracy Subbasin covers an area of approximately 373 square miles. It is bounded on the northwest by the Old River south to the tri-county confluence point and on the south by the Clifton Forebay where it then follows the Contra Costa-Alameda County line to the foothills of the Coastal Range mountains. The northeast boundary follows the San Joaquin River south to the San Joaquin County Line with a slight jog to include the City of Lathrop on the west side of the river. The southern border of the Subbasin generally follows the San Joaquin-Stanislaus County line, with some irregular areas belonging to the Delta-Mendota Subbasin to the south. The western border follows the Coastal Range foothills from the San Joaquin-Stanislaus County line; north to the Contra Costa-Alameda County line. The Subbasin is a mix of Delta islands (mostly agriculture) and waterways along with urban and agricultural communities on the southern edge.[9]

Adjacent to the Tracy Subbasin are the Eastern San Joaquin Subbasin to the east, the Delta-Mendota Subbasin to the south, and the Sacramento Valley Groundwater Basin to the north. The three subbasins, not including the Sacramento Valley Groundwater Basin, are part of the San Joaquin Valley Groundwater Basin. The San Joaquin River and one of its major west side tributaries, Corral Hollow Creek, provide drainage from the Tracy Subbasin. The San Joaquin River flows northward into the Sacramento and San Joaquin Delta and discharges into San Francisco Bay.

The Tracy Subbasin is comprised of continental deposits of Late Tertiary to Quaternary age. These deposits include the Tulare Formation, Older Alluvium, Flood Basin Deposits, and Younger Alluvium. The cumulative thickness of these deposits increases from a few hundred feet near the Coast Range foothills on the west to about 3,000 feet along the eastern margin of the subbasin.

Each of these formations is described below.

- The Tulare Formation is exposed in the Coast Range foothills along the western margin of the subbasin and dips eastward toward the axis of the San Joaquin Valley. The Tulare Formation is approximately 1,400 feet thick and consists of semi-consolidated, poorly sorted, discontinuous deposits of clay, silt, and gravel. The Corcoran Clay occurs near the top of the Tulare Formation and confines the underlying fresh water deposits. The eastern limit of the Corcoran Clay is near the eastern boundary of the subbasin. The Tulare Formation is moderately permeable, with most of the larger agricultural, municipal, and industrial wells completed below the Corcoran Clay and capable of producing up to about 3,000 gpm. Smaller, domestic wells are typically completed above the Corcoran Clay, where the groundwater is often of poor quality. Specific yield values for the Tulare Formation in the San Joaquin Valley and Delta area range from 7 to 10 percent.
- The Older Alluvium is approximately 150 feet thick and consists of loosely to moderately compacted sand, silt, and gravel deposited in alluvial fans during the Pliocene and Pleistocene eras. The Older Alluvium is widely exposed between the Coast Range foothills and the Delta and is moderately to locally highly permeable.

### 6.1.4.2 Groundwater Management

#### *6.1.4.2.1 Pre-SGMA Groundwater Management*

Prior to the passage of the Sustainable Groundwater Management Act (SGMA) in 2014, the 1992 Groundwater Management Act, Assembly Bill (AB) 3030, established provisions by which local water agencies could develop and implement Groundwater Management Plans (GWMP). GWMPs are generally designed to prevent local and regional aquifer overdraft, which reduces available groundwater resources and which, under certain conditions, can lead to degradation of water quality and to land subsidence.

The City, BBID, Banta-Carbona Irrigation District (BCID), and San Joaquin County formed a Groundwater Advisory Committee to facilitate the development of a regional GWMP for the Tracy Subbasin. The planning area of the Tracy GWMP encompassed the portion of the Tracy Subbasin underlying San Joaquin County. The Tracy GWMP was adopted in 2007 and is available on the San Luis & Delta-Mendota Water Authority website:
http://sldmwa.org/OHTDocs/pdf_documents/Groundwater/GroundwaterManagementPlanNorthernApproved11_2011.pdf

The key results of the Tracy GWMP included the following:

- Developed a general consensus among stakeholders regarding the characterization of the area's water problems, current and future demands, and groundwater conditions;
- Documented the region's groundwater management goals and establishing basin management objectives to help measure progress in attaining the goals;
- Developed specific solutions and common programs for the basin; and
- Provided an implementation plan to direct future groundwater management activities.

The Tracy GWMP concluded that the Tracy Subbasin is full, but experiences groundwater quality issues in portions of the basin associated with nitrate, boron, sulfate, chloride, and total dissolved solids (TDS). As such, many of the groundwater management options that were recommended focused on creating available storage and managing pumping in order to increase water quality within the Tracy Subbasin.

San Joaquin County is the designated Monitoring Entity under CASGEM for the portion of the Tracy Subbasin underlying the county. However, upon submission of the GSP, the CASGEM program will be superseded by the SGMA monitoring efforts.

#### *6.1.4.2.2 SGMA Groundwater Management*

On August 29, 2014, the California Legislature passed comprehensive groundwater legislation contained in SBs 1168 and 1319, and AB 1739, which are collectively referred to as SGMA. This legislation was signed by Governor Brown on September 16, 2014 and it became effective on January 1, 2015. The legislative intent of SGMA is to provide sustainable management of groundwater basins, enhance local management of groundwater, establish minimum standards for sustainable groundwater management, and provide local groundwater agencies with the authority and the technical and financial assistance necessary to sustainably manage groundwater.

The Tracy Subbasin is designated by DWR as a medium priority basin (DWR, 2019a). As such, the Tracy Subbasin is subject to the requirements of SGMA, which include the formation of a one or more

Groundwater Sustainability Agencies (GSAs) and the development and implementation of one or more Groundwater Sustainability Plans (GSPs) by January 31, 2022. If the statutory deadline is not met for GSP development and/or implementation, the State has the authority to intervene and manage groundwater within non-compliant subbasins. SGMA requires that adopted GSPs result in sustainable groundwater management which avoids undesirable results.

The Tracy Subbasin contained areas of San Joaquin, Contra Costa and Alameda Counties. The Banta-Carbona Irrigation District, Byron-Bethany Irrigation District, City of Tracy, City of Lathrop, Stewart Tract, West Side Irrigation District, and San Joaquin County are GSAs within the Tracy Subbasin. The GSAs recognize that developing and adopting a single GSP for the subbasin would be the most efficient way of achieving sustainability and preventing State intervention into local groundwater management.

Working with San Joaquin County and the Tracy Subbasin GSAs, a Memorandum of Agreement (MOA) has been developed for the development of the San Joaquin County GSP for the Tracy Subbasin. Under the terms of the MOA, San Joaquin County is designated as the lead entity to enter into an agreement with the City of Brentwood to coordinate the allocation of grant funds.

The City, BCID, BBID[10], City of Lathrop, San Joaquin County, and Stewart Tract are the six GSAs formed in the Tracy Subbasin and are working cooperatively to develop a single GSP. The Tracy Subbasin GSAs were awarded a DWR grant to develop the GSP. Pursuant to the Grant Agreement, each GSA designated an appointee to form the GSP Coordination Committee, and the San Joaquin County was appointed as the Grant Administrator. The Grant Administrator or any two appointees may call meetings of the GSP Coordination Committee as needed to in the GSP development process.

The GSP for the Tracy Subbasin has been completed and is currently in the process of being adopted by each of the GSAs. The Tracy City Council adopted the Final GSP on November 16, 2021. The other GSAs are anticipated to adopt the Final GSP in December 2021. The Final GSP must be submitted to DWR by the statutory deadline of January 31, 2022. The Draft Final GSP is available for public review on the Tracy Subbasin website: https://tracysubbasin.org/gsp-chapters/.

As one of the six GSAs that are managing the Tracy Subbasin., the City has been actively involved in GSP development activities and will continue to be involved throughout SGMA implementation. The City has one appointee (and an alternate) on the Tracy Subbasin GSP Coordination Committee, which meets quarterly, and the Technical Committee, which meets monthly.

#### 6.1.4.3 Groundwater Yield

Based on a groundwater study the City completed in 2001 (Bookman-Edmonston, 2001), the City is able to withdraw up to 9,000 af/yr from the Tracy Subbasin on an average annual basis. However, groundwater production is constrained by the City's well production and treatment capacity, as the infrastructure is aging. Production is further limited by the water quality issues of the City's groundwater supplies, including high total dissolved solids (TDS) concentrations, hardness, and potential formation of chloramines. As the Groundwater Sustainability Plan (GSP) for the Tracy Subbasin is developed and implemented, the City's groundwater supply reliability may be revisited.

[10] West Side Irrigation District has officially merged with Byron-Bethany Irrigation District in September 2020, which occurred later than the release of the draft GSP chapters.

A 1990 Kennedy/Jenks/Chilton (K/J/C) study estimated a perennial groundwater yield of 6,700 af/yr in the Tracy Sub-basin within the Tracy Study Area. However, in 2001, to determine if additional groundwater resources were available in the Tracy Study Area, the City conducted an updated groundwater analysis. The Estimated Groundwater Yield Study, prepared by Bookman-Edmonston Engineering provided an evaluation of potential groundwater yield and determined that a 2,300 af/yr increase of the average annual operational groundwater yield above the groundwater yield recommended in the 1990 K/J/C study could be provided within the estimated safe yield of the Tracy Sub-basin in the Tracy Study Area, without adverse impact to groundwater resources or quality in the Tracy Study Area over a 50-year timeframe. This expansion of groundwater usage to 9,000 af/yr would be within the City's estimated 22,000 af/yr share of the aquifer's estimated total safe yield of 28,000 af/yr (total includes City groundwater usage as well as groundwater usage within West Side Irrigation District, Naglee-Burk Irrigation District, Plain View Water District (now part of the Byron Bethany Irrigation District), and Banta-Carbona Irrigation District). It was also estimated that this expansion of groundwater usage would result in a groundwater level drop of 10 feet but would stabilize at this level.

In 2015, the City hired GEI to perform an assessment on what the effects would be if the City were to pump between 16,000 and 22,000 af/yr for a single year to meet its demands during a drought emergency when no surface water supplies were available. The assessment considered potential impacts on groundwater levels, groundwater quality, and land subsidence. GEI's approach to this assessment was to estimate drawdown beneath the City, including drawdown caused by well interference, under scenarios wherein all of the City's wells were pumped for a single year at rates needed to meet the above stated demands. Drawdown estimates were made using analytical methods and aquifer hydraulic property data from pumping tests performed at two of the City's wells. Results showed that the City does have capacity to pump its wells to meet these single dry year demands, but that drawdown in the City's wells and at locations proximate to the City would exceed that which has been historically observed. GEI (2015) estimated that groundwater levels would recover from their drawdown within approximately seven years.

#### 6.1.4.4 Groundwater Quality

Groundwater quality in the Tracy Subbasin varies spatially and with depth. In general, the northern part of the Tracy Subbasin is characterized by a sodium water type, and the southern part of the Tracy Subbasin is characterized by calcium-sodium water type (Sorenson, 1981). The northern part of the Tracy Subbasin is also characterized by a wide range of anionic water types, including bicarbonate; chloride; and mixed bicarbonate-chloride. Major anions in the southern part of the Tracy Subbasin include sulfate-chloride and bicarbonate-chloride.

There is also a difference between the water quality in the water-bearing zones above the Corcoran Clay (termed the "semi-confined aquifer") and below the Corcoran Clay (termed the "confined aquifer"). Generally, the water quality of the confined aquifer is better than that of the semi-confined aquifer (Stoddard & Associates 1996).

Constituents present at elevated concentrations throughout the Tracy Subbasin in both the semi-confined and confined aquifers include chloride, nitrate, sulfate, and boron. Elevated chloride occurs in several areas near Tracy and along the San Joaquin River. Areas of elevated nitrate occur in the northwestern part of the Tracy Subbasin and in the vicinity of Tracy. Elevated boron occurs over a large portion of the Tracy Subbasin from south of Tracy extending to the northwest side of the Tracy Subbasin. Sulfate concentrations of up to 500 mg/L have been detected in Tracy Subbasin groundwater. The groundwater near Tracy is considered to be very hard (Stoddard & Associates, 1996).

A summary of groundwater quality in the Tracy Subbasin is included in the GSP materials available on the Tracy Subbasin website (https://tracysubbasin.org/). The water quality conditions in groundwater represent conditions for source water, prior to treatment by the City and service to customers.

One water quality concern that the City actively manages is TDS. The City's groundwater supply typically meets the primary maximum contaminant level (MCL) of 1,000 milligrams per liter (mg/L) but frequently exceeds the secondary MCL of 500 mg/L. In 2019, the City's groundwater supply ranged from 386 to 876 mg/L of TDS, with an average concentration of 752 mg/L.[25] Because the TDS concentrations are significantly higher in the groundwater supply than in the City's other water supply sources, in order to meet the secondary MCL in its overall water supply, the City typically scales back its groundwater production from its estimated sustainable yield of 9,000 af/yr, particularly in normal rainfall years.

The City continues to rely on groundwater for peaking, and under drought conditions, it typically increases its groundwater production as needed to meet demands when surface water supplies become more limited. Groundwater quality is not expected to impact the reliability of available water supplies in the 2020 UWMP planning horizon.[11]

#### 6.1.4.5 Historical Groundwater Use

As discussed previously, the City currently operates nine groundwater extraction wells:

- Well 1 (at JJWTP)
- Well 2 (at JJWTP)
- Well 3 (at JJWTP)
- Well 4 (at JJWTP)
- Lincoln Well
- Well 5 (Lewis Manor Well)
- Well 6 (Ball Park Well)
- Well 7 (Park & Ride Well)
- Well 8 (for ASR)

The City's newest well, Well 8, was constructed in January 2004 and was permitted by the California Department of Public Health[12] for use as a municipal production well in September 2010, and was used as an ASR demonstration well during 2011, 2012 and 2013, In November 2013, the City received authorization from the Central Valley Regional Water Quality Control Board (RWQCB) to operate Well 8 as an ASR well.

Historically, groundwater had accounted for up to 50 percent of the City's water supply. Prior to 2001, groundwater extraction in Tracy totaled less than 6,000 af/yr. Between 2001 and 2004, to meet increased demands for water, Tracy began extracting additional groundwater, ranging from 6,878 to 7,717 af/yr. In 2005, groundwater extraction decreased to approximately 6,000 af/yr because: (1) the SCWSP was completed and the City began receiving Stanislaus River water, and (2) rainfall was above normal, meaning that the City received a high percentage of its DMC/CVP contractual entitlements. From 2006 to 2010, groundwater extraction ranged from 3,672 af/yr to 498 af/yr, declining as more water was used from SSJID. The City's groundwater production over the last several years is provided in Table 6-2.

[11] City of Tracy 2020 UWMP, June 2021, Section 7.1.1.8.

[12] As of July 1, 2014, the State's administration of the Drinking Water Program transferred from the State Department of Public Health to the SWRCB Division of Drinking Water (DDW).

**Table 6-2. City of Tracy Historical Groundwater Production**

| Condition | 2012[a] | 2013[a] | 2014[a] | 2015[a] | 2016[b] | 2017[b] | 2018[b] | 2019[b] | 2020[b] |
|---|---|---|---|---|---|---|---|---|---|
| Total Groundwater Production, af/yr | 252 | 515 | 680 | 519 | 648 | 996 | 817 | 645 | 1,181 |

(a) Source: City of Tracy 2015 UWMP, Table 5-1 Current and Historical Potable Water Supply, May 2016.
(b) Source: City of Tracy WSMP Update, Table 6-1 Groundwater Volume Pumped, June 2021.

Other groundwater users in the Tracy area include the West Side Irrigation District, Naglee-Burk Irrigation District, Plain View Water District (now the Byron Bethany Irrigation District), and Banta-Carbona Irrigation District. Although current groundwater pumpage by these users was not available for inclusion in this WSA, the 2001 Estimated Groundwater Yield Study, which established the City's estimated groundwater yield of 9,000 af/yr, considered the cumulative groundwater usage in the study area by the City and other users in the Tracy area.

### 6.1.4.6 Projected Future Groundwater Use

As discussed in Section 6.1.4.3, the City may sustainably pump up to 9,000 af/yr from the local groundwater basin. Since the hard, high TDS groundwater is of lower quality than the City's surface water sources, the City has scaled back its groundwater extraction in most years. However, the City will continue to rely on groundwater for peaking and drought and emergency water supply. Table 6-3 shows the anticipated future groundwater production during a normal year and during dry years.

As can be seen in Table 6-3, the City anticipates that total extraction during a normal year will be 2,500 af/yr through the planning horizon. By reducing groundwater extraction on an average annual basis, the City will: (1) increase the overall quality of its drinking water, thus increasing customer satisfaction and reducing system maintenance and repair caused by the lower-quality groundwater; and (2) recharge the underlying aquifer, effectively increasing the availability of groundwater during a drought or emergency condition (i.e., effectively "banking" groundwater). At the production volumes shown in Table 6-3, the City's groundwater supplies are considered to be 100 percent reliable.

The projected uses of groundwater during droughts shown in Table 6-3 are consistent with the City's Groundwater Management Policy (PMC, 2001). In the event that the City is unable to secure additional high-quality surface water supplies in the future, the City is able to expand groundwater production up to 9,000 af/yr. In the event of a severe water supply shortage or emergency, the City has the ability to increase production dramatically, up to 22,000 af/yr (GEI, 2015).

**Table 6-3. City of Tracy Projected Future Groundwater Production in Normal and Dry Years**

| Condition | 2025 | 2030 | 2035 | 2040 | 2045 |
|---|---|---|---|---|---|
| Total Groundwater Production During a Normal Year, af/yr[a] | 2,500 | 2,500 | 2,500 | 2,500 | 2,500 |
| Total Groundwater Production During Dry Years, af/yr[b] | 4,500 | 4,500 | 4,500 | 4,500 | 4,500 |

(a) *Source: City of Tracy 2020 UWMP, Table 7-2 Projected Water Supply in Normal Years, June 2021.*
(b) Source: *City of Tracy 2020 UWMP, Section 7.1.2.2 and Section 7.1.2.3, June 2021.*

#### 6.1.4.7 Groundwater Sufficiency

The 2020 UWMP addressed the sufficiency of the City's groundwater supplies, in conjunction with the City's other existing and additional water supplies, to meet the City's existing and planned future uses[13]. Based on the information provided above and included in the 2020 UWMP, the City's groundwater supply, together with the City's other existing and additional planned future water supplies, is sufficient to meet the water demands of the Proposed Project, in addition to the City's existing uses.

As discussed above, the City's use of groundwater over the last few years has significantly declined, primarily due to the availability of higher-quality surface water supplies from the SCWSP. In the future, although the City can sustainably extract up to 9,000 af/yr of groundwater on a continuous basis, the City's use of groundwater under normal hydrologic conditions is anticipated to be lower, as available higher-quality surface water supplies would be utilized first. As shown in Table 6-3, in the future, assuming normal year hydrologic conditions, annual groundwater use is anticipated to be 2,500 af/yr. This anticipated future groundwater pumpage is significantly below the City's maximum historical groundwater pumpage (see Figure 6-1) and the average annual operational yield of 9,000 af/yr.

- The Flood Basin Deposits occur in the Delta portion of the subbasin and are the distal equivalents of the Tulare Formation and Older and Younger alluvial units. The Flood Basin Deposits consist primarily of silts and clays with occasional interbeds of gravel along the present waterways. Because of their fine-grained nature, the Flood Basin Deposits have low permeability and generally yield low quantities of water to wells. Occasional zones of fresh water are found in the Flood Basin Deposits, but they generally contain poor quality groundwater. The maximum thickness of the Flood Basin Deposits is about 1,400 feet.
- The Younger Alluvium includes those deposits that are currently accumulating, including sediments deposited in the channels of active streams, as well as overbank deposits and terraces of these active streams. The Younger Alluvium, consisting of unconsolidated silt, fine- to medium-grained sand, and gravel, is present to depths of less than 100 feet below ground surface (bgs) along the channel of Corral Hollow Creek. Sand and gravel zones in the Younger Alluvium are highly permeable and, where saturated, yield significant quantities of water to wells.

### *6.1.5 Aquifer Storage and Recovery*

The City has been implementing an ASR Program to store surplus treated surface water in the confined aquifer beneath Tracy and extract that water to meet peak demands or supplement surface water sources during dry years. The City has one former groundwater extraction well, Well 8, which has been operated as an ASR well since 2013 after the successful demonstration of ASR feasibility.[14] Well 8 is located near the intersection of Tracy Boulevard and 6th Street and penetrates the Lower Tulare Formation.

The recharge water source of the City's ASR Program is treated SCWSP water.[15] The City's SCWSP water supply is of exceptionally high water quality, with a TDS concentration of approximately 64 milligrams per

[13] Chapter 6, City of Tracy 2020 Urban Water Management Plan, prepared by Erler & Kalinowski, Inc., June 2021.

[14] Notice of Applicability for General Water Quality Order 2012-0010-DWQ-RB5S-0002, Aquifer Storage and Recovery Program, City of Tracy (Well No. 8), San Joaquin County, dated 13 November 2013.

[15] Per the terms of its agreement with the RWQCB, the City is not permitted to inject treated DMC/CVP at Well 8.

liter (mg/L).[16] Since the TDS concentration of the recharge water source is much lower than that of the Lower Tulare Formation aquifer's native groundwater, operation of the City's ASR Program reduces the localized salinity of the aquifer, resulting in lower TDS content in water supplies extracted from Well 8 than would be expected in the absence of the ASR Program. Additionally, the reduced salinity in groundwater recovered from Well 8 results in lower salt loading at the City's wastewater treatment plant (WWTP), which eventually reduces the salinity of effluent from the WWTP. This helps the City meet its Regional Water Quality Control Board (RWQCB) effluent salinity requirements and provides environmental benefits to the river ecosystems.

Injection of SCWSP water into the ASR well occurs during the winter months (i.e., November through April), when City demands are low. Extraction occurs primarily in the summer months to meet increased demands associated with irrigation needs, and as needed during droughts and water shortage emergencies. It is estimated that between 685 and 915 af/yr of potable water could be injected into the aquifer, assuming a 5-month continuous injection rate of 1.5 to 2.0 mgd at Well 8. The City's strategic plan for ASR operations at Well 8 involves injecting up to 1,000 af/yr over six months during the winter and extracting 75 percent of the injection volume during the following summer. These operations would result in net injection into the Lower Tulare Formation aquifer, which will gradually create a "buffer supply" that the City can utilize in dry years or during water shortage emergencies. In 2020, a net volume of approximately 190 af was injected and stored at Well 8 for the following year.

The City plans to implement its ASR Program stages as new ASR wells are constructed. The ASR supply will be available to meet demands in dry years, thereby increasing the reliability of the City's water supply during drought conditions or water shortage emergencies.

### *6.1.6 Semitropic Groundwater Storage Bank*

The City has acquired the rights to store and recover water in the Semitropic Groundwater Storage Bank (Semitropic) operated by the Semitropic Water Storage District (Semitropic WSD). The Semitropic facilities are located in Kern County alongside the California Aqueduct and the DMC. The first phase of Semitropic was initiated in the early 1990s and established one million acre-feet of storage for a group of agencies referred to as the Original Banking Partners. In response to increased demand for banking capacity, up to 650,000 af of additional storage was created for the Stored Water Recovery Unit (SWRU). When an agency purchases storage capacity in Semitropic, it is able to recover the volume of water it has banked over a period of three consecutive years (i.e., 3,000 af equates to a maximum recovery rate of 1,000 af/yr for three years).

The City originally entered into a pilot agreement with Semitropic WSD in June 2006 for 1,000 af of water storage in Semitropic's SWRU. The pilot agreement was intended to establish the procedures for water deposits and withdrawals by the City and was terminated when the permanent agreement was implemented. In 2012, the City entered into a long-term agreement with Semitropic WSD for up to 10,500 af of storage volume.[17] This storage agreement allows the City to withdraw up to 3,500 af of water annually for three years. To store water in Semitropic, the City withdraws less than its available allocation

[16] City of Tracy 2019 Water Quality Report: https://www.ci.tracy.ca.us/documents/2019_City_of_Tracy_Water_Quality_Report.pdf.

[17] "Agreement Between City of Tracy and Semitropic Water Storage District and Its Improvement Districts for Participation in the Stored Water Recovery Unit of the Semitropic Water Banking and Exchange Program" dated November 2012.

of CVP water from the DMC.This water travels through the DMC where it is diverted by Semitropic and used for local groundwater recharge. When the City wishes to withdraw water that it has banked previously, Semitropic arranges for the City to divert CVP water beyond its allocation from the DMC. This source of water is provided through either an exchange of Semitropic WSD's contractual entitlement to State Water Project (SWP) water or through direct "pump back" of stored groundwater into the California Aqueduct by Semitropic WSD.

Though the City could utilize this supply in any year, it is most valuable during extended drought years when the City's surface water supplies are reduced. The City anticipates that banking water at Semitropic will increase the reliability of the City's water supply and help close the potential future gap between supply and demand during drought conditions or other water supply shortage emergencies. If the City uses water from the Semitropic water bank in any given year, it would manage its supplies during subsequent years such that it could refill the water bank for future use. The City plans to actively maintain storage in Semitropic as feasible.

As of December 2020, the City had 6,887 af of water in storage at Semitropic.

## 6.2 Additional Planned Future Potable Water Supplies

In addition to the City's existing potable water supplies described above, the City has a number of additional planned future potable water supplies to meet the City's existing and projected future water demands, including those associated with the Proposed Project. The inclusion of planned future water supplies in this WSA is specifically allowed by the Water Code:

> *Water Code Section 10631(b): Identify and quantify, to the extent practicable, the existing and planned sources of water available to the supplier over the same five-year increments described in subdivision (a).*

The City anticipates implementation of the following projects for additional future potable water supplies:

- ASR Program Expansion
- Recycled Water Distribution Network and Exchange Program for Additional CVP Water Supplies

The City also anticipates increased water supply to meet M&I demands as agricultural land is developed. However, additional water supply through land use conversion has associated constraints that must be resolved.

These additional planned future water supplies are described in further detail below. Summary tables listing the City's existing and additional planned future water supplies, and historical and anticipated future quantities are provided in Section 6.5.

### *6.2.1 ASR Program Expansion*

As described above, the City currently has one ASR well (Well 8) which allows the City to inject excess SCWSP water supplies into the groundwater basin for later extraction when needed. The current injection and extraction capacity is 700 af/yr. The City is planning to expand the ASR program with the installation of additional ASR wells. According to the WSMP Update, the City's ASR Program will be expanded to provide up to 1,000 af/yr of water supplies from the existing and new ASR wells by 2040. The ASR supply will be used to meet demands during dry years, thereby increasing the reliability of the City's water supply

and helping to close the potential gap between supply and demand during drought conditions or water shortage emergencies.

One constraint with the City's ASR Program is that the permit only allows for SCWSP water to be injected. This means that the City has to shut down the JJWTP and the groundwater wells during the injection period so that only SCWSP supplies are being utilized. A potential alternative to avoid this operational restriction, if the City's ASR permit cannot be modified to allow for other water supplies to be injected, would be to construct a dedicated SCWSP water pipeline to the ASR well(s). Future expansion of the ASR program will need to fully evaluate these operational restrictions and potential alternatives.

### *6.2.2 Recycled Water Distribution Network and Exchange Program for Additional CVP Water Supplies*

The City is evaluating indirect reuse of its recycled water through an exchange agreement with the USBR, where a portion of the City's recycled water would be discharged into the DMC, and a like amount of water would be diverted from the DMC for treatment at the JJWTP for potable use. This project is considered an essential part of the City's projected future water supply portfolio as it provides the following multiple benefits:

- Provides for the beneficial use of recycled water;
- Provides an additional potable water supply for the City;
- Improves water supply reliability and reduces the City's dependence on other imported supplies;
- Builds on the existing wastewater and recycled water infrastructure; and
- Reduces salt loading in the Delta as USBR has to release additional water from the New Melones Reservoir to meet Delta salinity standards.

The Recycled Water Distribution Network and Exchange Program would require development of a project description, National Environmental Policy Act (NEPA) / California Environmental Quality Act (CEQA) review, an exchange agreement with the USBR, and design and construction of a new recycled water pipeline to discharge recycled water to the DMC downstream of the City's JJWTP intake. Assuming such a project is implemented, the City expects that it would initially provide an estimated 1,925 af/yr of potable water, and future expansion of the program could be implemented as needed to meet future demands up to 7,500 af/yr. This supply would be 100 percent reliable and would not be subject to drought cutbacks.

### *6.2.3 Additional Central Valley Project Water Supplies from BBID via the Delta-Mendota Canal*

Additional BBID DMC/CVP water supplies may be available to the City as agricultural land is converted to M&I uses. The land area that could potentially provide this additional water supply includes the portion of BBID's service area that falls within the City's planning areas (excluding the BBID Raw Water Service Area 2). Eligible land area is estimated to be approximately 2,600 acres. While the exact quantity of water that would be available is unknown, a contractual entitlement equal to 3.4 af/yr/acre may be available, resulting in a total supply of up to 8,800 af/yr (2,600 acres x 3.4 af/yr/acre).

The additional water supplies would, however, have agricultural reliability similar to the City's Ag reliability CVP supplies described in Section 6.1.1.2 above and would be subject to significant cutbacks in dry years. Agreements between the City and BBID, as well as environmental review, would need to occur before such a transaction could take place.

Because of the uncertainty associated with the availability and reliability of this supply source, especially in dry years, for purposes of the City's 2020 UWMP and this WSA, this future water supply is assumed to be unavailable to the City.

## 6.3 Additional Planned Future Non-Potable Water Supplies

### *6.3.1 Recycled Water*

The City has invested in infrastructure to produce and deliver recycled water. The City's WWTP has sufficient treatment capacity to produce approximately 9.0 mgd of tertiary-treated recycled water meeting the Title 22 requirements, which can be reused for landscape irrigation and other non-potable uses. The City's current recycled water system consists of a pump station at the WWTP and approximately 7.6 miles of recycled water transmission line from the WWTP west to Lammers Road and south to W. Schulte Road. Currently the only service connection is for the Legacy Fields Sports Complex.

#### 6.3.1.1 Planned Uses Within Service Area

At this time, no recycled water is used within the City's service area. The City is planning to expand the existing recycled water system to serve future development areas, as well as a small number of existing parks and irrigated areas. New developments in the City are required to include recycled water distribution systems in accordance with the City's Recycled and Non-Potable Water Ordinance (Tracy Municipal Code, Chapter 11.30). The City's Department of Utilities and Development Services are coordinating planning efforts to connect existing water customers and new development to recycled water.

The City intends to expand the existing recycled water system to serve non-potable water demands in most of the new development areas. Recycled water is planned to be used at: (a) parks, sports fields, and other landscape areas; (b) industrial facilities such as the Tracy Power Plant; (c) fill stations for dust control during construction, street sweeping, and residential emergency landscape irrigation; and (d) the proposed lakes at Tracy Village. The future recycled water use was estimated to be 1,000 af/yr in 2025, increasing to 6,300 af/yr in 2045 as new development areas build out, based on the adopted unit water demand factors and the future dwelling units or gross acreage.

Several future service areas already have recycled water distribution pipelines installed by developers, including Cordes Ranch, Ellis Specific Plan Phase 1, and Tracy Hills Phase 1. These pipelines are not yet connected to the recycled water mains, but instead are temporarily connected to the potable water system to meet irrigation demands. Once recycled water system construction is complete and the appropriate permitting is completed, the pipelines will be connected to the recycled water system and the temporary connections to the potable water system will be removed.

#### 6.3.1.2 Other Potential Future Uses

The City is considering other potential future uses for recycled water. As described in Section 6.2.2, the City is evaluating the use recycled water in exchange for additional CVP supply through the proposed Recycled Water Distribution Network and Exchange Program.

The City is also considering the potential for direct potable reuse of recycled water in the future. With direct potable reuse, recycled water would be discharged directly into the DMC and then conveyed to downstream users, including the City. However, the project is in the conceptual evaluation stage and therefore the future recycled water use associated with this potential approach is not quantified.

### *6.3.2 Shallow Non-Potable Groundwater*

The Tracy Subbasin underlying the City has two aquifers: semi-confined and confined. The City's production wells draw groundwater solely from the confined portion of the Lower Tulare Formation aquifer. Above the confining Corcoran Clay is shallow groundwater that is not currently used for groundwater production. The water quality is considered to be not suitable for direct use due to the poor water quality. Thus, it is not included as a future supply source.

## 6.4 Summary of Existing and Additional Planned Future Water Supplies

Table 6-4 provides a summary of the City's existing and additional planned future water supply entitlements. As indicated in the table and discussed in Section 6.1, the City has historically used its existing water supply entitlements.

A discussion of the future anticipated availability of these existing and additional planned future water supplies during normal year, single dry year, and multiple dry years is provided in Section 6.5.

**Table 6-4. Summary of Existing and Additional Planned Future Water Supplies**

| Supply | Water Supply Entitlement, af/yr | Supply Used by City |
|---|---|---|
| Existing Water Supplies | | |
| USBR CVP - Tracy Contract[a] | 10,000 | Yes |
| USBR CVP - BCID Contract[b] | 5,000 | Yes |
| USBR CVP - WSID Contract[c] | 5,000 | Yes |
| BBID (pre-1914)[d] | 3,330 | Yes |
| SCWSP (SSJID) (pre-1914)[e] | 11,120 | Yes |
| Groundwater[f] | 9,000 | Yes |
| Dry Year Supplies | | |
| Semitropic Water Storage Bank[g] | 3,500 | Yes |
| Aquifer Storage and Recovery | 1,000 | Yes |
| Additional Planned Future Water Supplies | | |
| Additional USBR CVP (BBID contract)[h] | — | No |
| Recycled Water Exchange (Potable) | 7,500 | No |
| Recycled Water (for non-potable uses)[i] | 6,300 | No |

(a) M&I-reliability CVP water. Assumes the terms of the long-term renewal contract with the USBR are consistent with those of the interim renewal contract entered into between the City and USBR in February 2016.

(b) In June 2001, the USBR approved the assignment of 5,000 af/yr of BCID's contractual entitlement to Ag-reliability CVP water.

(c) In August 2001, the USBR approved the assignment of 2,500 af/yr of WSID's contractual entitlement to Ag-reliability CVP water, with the option to purchase an additional 2,500 af/yr in the future. In December 2013, the City and WSID approved the additional assignment; the City's current assignment of WSID CVP water is 5,000 af/yr.

(d) The City anticipates that up to 4,500 af/yr of BBID pre-1914 water will be available to serve the Tracy Hills Specific Plan development. This water is only available for use in the portion of Tracy Hills that lies within BBID Raw Water Service Area 2 the CVP Consolidated Place of Use, so the quantity of supply is limited to potable water demand in this area. Therefore, the maximum BBID supply delivered to this area is reduced to 3,330 af/yr.

(e) Includes the 10,000 af/yr allocation and the additional 1,120 af/yr obtained through the 2013 Lathrop-Tracy Purchase, Sale, and Amendment Agreement. Does not include the interim purchase from Escalon.

(f) The City is able to withdraw up to 9,000 af/yr of groundwater from the Tracy Subbasin. However, due to the aging infrastructure and water quality issues in the City's groundwater supplies, the City is projecting to be able to withdraw up to 2,500 af/yr in normal years. During dry years, the City anticipates increasing its groundwater production on a short-term basis from the normal year production of 2,500 af/yr to 4,500 af/yr.

(g) The City has purchased 10,500 af of water storage in the Stored Water Recovery Unit, which allows the City to withdraw up to 3,500 af/yr for three consecutive years.

(h) While up to 8,800 af/yr of BBID's Ag-reliability CVP water may be available as agricultural lands are converted to other uses, for purposes of water supply planning, the City assumes this supply will not be available.

(i) Based on the total projected recycled water demand at buildout of the City WSMP Update.

## 6.5 Water Supply Availability and Reliability

Water Code Section 10910 (c)(4) requires that a WSA include a discussion with regard to "whether total projected water supplies, determined to be available by the city or county for the project during normal, single dry, and multiple dry water years during a 20-year projection, will meet the projected water demand associated with the proposed project, in addition to existing and planned future uses, including agricultural and manufacturing uses." Accordingly, this WSA addresses these three hydrologic conditions through the Year 2045. Further, this WSA provides a discussion of the availability and reliability of the City's available water supplies to meet the City's water demands in the event that the City's surface water supplies are limited under emergency water supply conditions.

The reliability of each of the City's existing and additional planned water supplies and their projected availability during normal, single dry, and multiple dry years is described in Section 6 of the 2020 UWMP. Water supply and demands for these hydrologic years, from 2025 to 2045, are compared in Section 7 of the 2020 UWMP and summarized herein. These hydrologic year types are characterized as follows:

- A **normal year** represents the water supplies available under normal conditions, this could be an averaged range of years or a single representative year;
- A **single dry year** represents the lowest available water supply; and
- A **multiple dry year drought** (also referred to as five-consecutive-year drought) represents the driest five-year period in the historical record.

A summary of the reliability of the City's water supply sources is provided in Table 6-5 and discussed in the following sections.

**Table 6-5. Water Supply Reliability in Normal, Single Dry and Multiple Dry Years**

| Supply Source | Anticipated Reliability (% of Entitlement) | | |
|---|---|---|---|
| | Normal Years | Single Dry Years | Multiple Dry Years |
| Current Water Supplies | | | |
| USBR CVP | | | |
| M&I Reliability Water (Tracy Contract)[a] | 75 | 25 | 40 |
| Ag Reliability Water (BCID & WSID Contract) | 50 | 0 | 0 |
| BBID for Tracy Hills Demand | 100 | 100 | 100 |
| South County Water Supply Project (SSJID) | 100 | 56-76[b] | 56-100[b] |
| Groundwater[c] | 100 | 100 | 100 |
| Current Dry Year Supplies | | | |
| Semitropic Water Storage Bank[d] | — | 0 | 67 |
| Aquifer Storage and Recovery | — | 100 | 100 |
| Additional Planned Future Water Supplies | | | |
| USBR CVP (BBID contract) (Ag Reliability Water) | 0 | 0 | 0 |
| Recycled Water Exchange (Potable) | 100 | 100 | 100 |
| Recycled Water (for non-potable uses)[e] | 100 | 100 | 100 |

*Source: City of Tracy 2020 UWMP, Tables 7-2 and 7-3, and Section 7.1.2.3, June 31, 2020.*

(a) Anticipated reliability percentage is based on historical use in accordance with 2017 USBR CVP Municipal and Industrial Water Shortage Policy Update.

(b) Based on information from SSJID.

(c) Although the City can sustainably extract up to 9,000 af/yr of groundwater on a continuous basis, the City is planning to scale back its groundwater extraction in normal years to increase the overall quality of its water supply. With these reduced supply volumes, the groundwater resource is considered 100 percent reliable.

(d) Due to the difficulties experienced by the City in accessing stored water via the DMC, the City has conservatively assumed that 0 percent of the City's Semitropic water supply will be available in the first year of a multiple dry year period and 100 percent will be available in the second and third year. The 67 percent presented in this table for multiple dry years is the average value for a three-year period.

(e) Although recycled water supplies are currently available from the City's WWTP, required recycled water pipelines and pump stations to convey and deliver the recycled water to the recycled water use areas have not yet been constructed. See Section 6.3.1 of this WSA for additional information regarding the City's plan for implementation of its recycled water system.

### *6.5.1 Normal Years*

Normal or wet water years are those that match or exceed median rainfall and runoff levels. The reliability of each of Tracy's existing and future water supplies and their projected availability during normal year is outlined below:

- The City's contract with the USBR for 10,000 af/yr of DMC/CVP water is subject to M&I reliability. Based on the historical record, the City's long-term average allocation of DMC/CVP water pursuant to this contract is anticipated to be at least 85 percent of the total entitlement. However, due to recent environmental concerns in the Delta and potential future impacts due to climate change, the normal year supply of DMC/CVP M&I water is assumed to be 75 percent of the City's historical use. Based on a historical use of 5,930 af/yr (i.e., the average quantity of CVP water put to beneficial use by the City during the last three years of water deliveries that were unconstrained by the availability of CVP water), the projected normal year supply is 4,448 af/yr.
- The City has received acquired assignments from Banta-Carbona Irrigation District (BCID; 5,000 af/yr) and West Side Irrigation District (WSID; 5,000 af/yr) for a total entitlement of 10,000 af/yr of DMC/CVP water. These supplies are subject to Ag-reliability. The City is conservatively estimating that it will receive 50 percent of its Ag-reliability contractual entitlement, or 5,000 af/yr, in normal years.
- The City has acquired up to 4,500 af/yr of pre-1914 appropriative water rights water from BBID. These supplies are restricted in their place of use, and therefore the supply is anticipated to be equal to the projected demand within that place of use (i.e., the Tracy Hills area) ranging from 800 af/yr in 2025 to 3,300 af/yr in 2045. The City anticipates being able to receive 100 percent of this supply in normal years.
- The City has a total contractual entitlement of 13,135 af/yr of Stanislaus River water provided through the SCWSP, including 10,000 af/yr from its original contract with SSJID, 1,120 af/yr purchased from Lathrop, and 2,015 af/yr purchased on an interim basis from Escalon. The agreement between Tracy and Escalon is assumed to terminate after 2025. Based on information provided by SSJID, the City expects to receive 100 percent of its SCWSP water supply allocation during a normal water year. As such, the City anticipates being able to receive 13,135 af/yr of SCWSP supply in 2025 and 11,120 af/yr afterwards, assuming normal year conditions.
- The City is able to withdraw up to 9,000 af/yr of groundwater from the Tracy Subbasin. However, due to the aging infrastructure and water quality issues in the City's groundwater supplies, the City is projecting to be able to withdraw up to 2,500 af/yr in normal years. This groundwater supply is considered to be 100 percent reliable.
- The City does not anticipate using its Semitropic water or ASR water in normal years.
- The City anticipates that a Recycled Water Distribution Network and Exchange agreement will be executed with the USBR by 2030 to provide additional CVP supplies to the City in exchange for the City discharging a like amount of tertiary-treated recycled water to the DMC. The City assumes that the Recycled Water Distribution Network and Exchange will be implemented as needed to meet future demand conditions and is currently projected to supply an amount ranging from 1,925 af/yr in 2030 to 7,500 af/yr in 2045. This water supply is considered to be 100 percent reliable.

- The City's recycled water supply is expected to be 100 percent reliable. Based on the projected non-potable demands and assuming that the City makes investments in infrastructure and permitting, the City estimates that they will have access to 1,000 af/yr of recycled water supply in 2025, increasing to 6,300 af/yr in 2045.

The reliability of each of the City's existing and additional planned future water supplies and their projected availability during normal years at buildout is shown in Table 6-6.

**Table 6-6. Projected Existing and Additional Planned Future Water Supplies Available in Normal Years at Buildout**

| Supply | Percent Allocation/ Entitlement | Projected Available Supplies, af/yr |
|---|---|---|
| Existing Water Supplies | | |
| USBR CVP - Tracy Contract[a] | 75 | 4,448 |
| USBR CVP - BCID Contract | 50 | 2,500 |
| USBR CVP - WSID Contract | 50 | 2,500 |
| **Total CVP Supplies** | | **9,448** |
| BBID (pre-1914 to meet Tracy Hills demand) | 100 | 3,300 |
| SCWSP (SSJID) (pre-1914) | 100 | 11,120 |
| Groundwater | 100 | 2,500 |
| Semitropic Water Storage Bank[b] | 0 | 0 |
| **Total Existing Potable Supplies** | | **26,368** |
| Additional Planned Future Water Supplies[a] | | |
| Additional USBR CVP (BBID contract) | 0 | 0 |
| Aquifer Storage and Recovery[b] | 0 | 0 |
| Recycled Water Exchange | 100 | 7,500 |
| Recycled Water (non-potable) | 100 | 6,300 |
| **Total Additional Planned Future Potable Supplies** | | **7,500** |
| **Total Potable Supplies** | | **33,868** |
| **Total Additional Planned Future Non-Potable Supplies** | | **6,300** |
| **TOTAL WATER SUPPLY** | | **40,168** |

*Source: City of Tracy 2020 UWMP, Table 7-2, June 2021.*

(a) Percent of historical use
(b) Not used in normal years.

### *6.5.2 Single Dry Years*

During a single dry year, all of the City's existing surface water allotments are subject to some level of reduction. Assumed reductions are based on actual reductions in CVP deliveries experienced in the recent drought and the new USBR M&I Reliability Policy adopted in 2017. The actual reductions will vary with the severity of the regional water supply shortage and climatic conditions, and the consideration of contract agreements.

The reliability of each of Tracy's existing and future water supplies and their projected availability during a single dry year is outlined below and summarized in Table 6-7.

- The City's contract with the USBR for 10,000 af/yr of DMC/CVP water is subject to M&I reliability. During a single dry year, the City estimates to receive 25 percent of the City's historical use. Based on the historical use of 5,930 af/yr, the projected supply is 1,483 af/yr.
- The City has a total entitlement of 10,000 af/yr of DMC/CVP Ag-reliability water. The City anticipates receiving 0 percent of its DMC/CVP Ag-reliability water in a single dry year.
- The City has acquired up to 4,500 af/yr of pre-1914 appropriative water rights water from BBID. This supply is restricted with regard to the place of use (Tracy Hills). The City anticipates being able to receive 85 percent of its contractual entitlement in a single dry year (3,825 af/yr). As the projected demand is 3,300 af/yr in 2045 and is lower than the 3,825 af/yr of available supply, the reduction in reliability does not result in a reduction to actual amount of water used. Therefore, the supply in a single dry year is anticipated to be equal to the projected demand within the Tracy Hills area, ranging from 800 af/yr in 2025 to 3,300 af/yr in 2045.
- The City has a total contractual entitlement of 13,135 af/yr of Stanislaus River water provided through the SCWSP. Based on information provided by SSJID, the City expects to receive 76 percent of its SCWSP water supply allocation during 2025, 2030, and 2035 and 56 percent during 2040 and 2045. In addition, the SCWSP water transferred from Escalon is assumed to be unavailable after 2025. As such, the City estimates 9,974 af/yr of SCWSP supply in 2025, 8,444 af/yr in 2030 and 2035, and 6,177 af/yr afterwards.
- During a single dry year, the City anticipates increasing its groundwater production on a short- term basis from the normal year production of 2,500 af/yr to 4,500 af/yr. The groundwater supply is considered to be 100 percent reliable.
- The City anticipates that 700 af/yr of water will be available for use in a single dry year through operation of its ASR well. An additional 300 af/yr is estimated to be available by 2040 for a total of 1,000 af/yr. This water supply is considered to be 100 percent reliable assuming that the City is consistently able to refill the ASR storage during non-drought years to maintain at least 1,000 af in storage at the beginning of a single dry year.
- The City has acquired 10,500 af/yr of storage in Semitropic, which allows the City to withdraw up to 3,500 af/yr for three consecutive years. Due to the difficulties experienced by the City in accessing stored water via the DMC on a short timeframe, the City has conservatively assumed that the Semitropic water will not be available in a single dry year.

- The City anticipates that a Recycled Water Distribution Network and Exchange agreement will be executed with the USBR by 2030 to provide additional CVP supplies to the City in exchange for the City discharging a like amount of tertiary-treated recycled water to the DMC. The City assumes that the Recycled Water Distribution Network and Exchange will be implemented as needed to meet future demand conditions and is currently projected to supply an amount ranging from 1,925 af/yr in 2030 to 7,500 af/yr in 2045. This water supply is considered to be 100 percent reliable.
- The City's recycled water supply is expected to be 100 percent reliable. Based on the projected non-potable demands and assuming that the City makes investments in infrastructure and permitting, the City estimates that they will have access to 1,000 af/yr of recycled water supply in 2025, increasing to 6,300 af/yr in 2045.

The reliability of each of the City's existing and additional planned future water supplies and their projected availability during a single dry year at buildout is shown in Table 6-7.

**Table 6-7. Projected Existing and Additional Planned Future Water Supplies Available in Single Dry Years at Buildout**

| Supply | Percent of Entitlement | Projected Available Supplies, af/yr |
|---|---|---|
| Existing Water Supplies | | |
| USBR CVP - Tracy Contract[a] | 25 | 1,483 |
| USBR CVP - BCID Contract | 0 | 0 |
| USBR CVP - WSID Contract | 0 | 0 |
| **Total CVP Supplies** | | **1,483** |
| BBID (pre-1914 to meet Tracy Hills demand) | 100 | 3,300 |
| SCWSP (SSJID) (pre-1914)[b] | 56 | 6,177 |
| Groundwater[c] | 100 | 4,500 |
| Semitropic Water Storage Bank | 0 | 0 |
| **Total Existing Potable Supplies** | | **15,460** |
| Additional Planned Future Water Supplies | | |
| Additional USBR CVP (BBID contract) | 0 | 0 |
| Aquifer Storage and Recovery[c] [d] | 100 | 1,000 |
| Recycled Water Exchange[c] | 100 | 7,500 |
| Recycled Water (non-potable)[c] | 100 | 6,300 |
| **Total Additional Planned Future Potable Supplies** | | **8,500** |
| **Total Potable Supplies** | | **23,959** |
| **Total Additional Planned Future Non-Potable Supplies** | | **6,300** |
| **TOTAL WATER SUPPLY** | | **30,259** |

*Source: City of Tracy 2020 UWMP, Table 7-3, June 2021.*

(a) Percent of historical use.
(b) Percentage of contract entitlement is based on information from SSJID for 2040 and later.
(c) Groundwater and recycled water volumes assume the City invests in infrastructure and/or permitting.
(d) ASR volumes assume surplus supplies are available in wet years to inject and store, as well as additional investment in ASR construction and operation.

### *6.5.3 Multiple Dry Years*

During multiple dry years, the City's surface water supplies (from both the CVP and SCWSP) may be significantly reduced. Thus, in the event of drought, the City will have to depend more heavily on conservation efforts, groundwater, and the proposed future supply projects.

The reliability of each of Tracy's existing and future water supplies and their projected availability during a five consecutive year drought is outlined below and summarized in Table 6-8.

- The City's contract with the USBR for 10,000 af/yr of DMC/CVP water is subject to M&I reliability. During multiple dry years, the City estimates that it will receive 40 percent of the City's historical use. Based on the historical use of 5,930 af/yr, the projected supply is 2,372 af/yr.
- The City has a total entitlement of 10,000 af/yr of DMC/CVP Ag-reliability water. The City anticipates receiving 0 percent of its DMC/CVP Ag-reliability water in multiple dry years.
- The City has acquired up to 4,500 af/yr of pre-1914 appropriative water rights water from BBID. This supply is restricted with regard to the place of use (Tracy Hills). The City anticipates being able to receive 85 percent of its contractual entitlement in multiple dry years (3,825 af/yr). As the projected demand is 3,300 af/yr in 2045 and is lower than the 3,825 af/yr of available supply, the reduction in reliability does not result in a reduction to actual amount of water used. Therefore, the supply in multiple dry years is anticipated to be equal to the projected demand within the Tracy Hills area, ranging from 800 af/yr in 2025 to 3,300 af/yr in 2045.
- The City has a total contractual entitlement of 13,135 af/yr of Stanislaus River water provided through the SCWSP. Based on information provided by SSJID, the City's SCWSP water supply reliability during multiple dry years range from 56 to 100 percent. In addition, the SCWSP water transferred from Escalon is assumed to be unavailable after 2025. The City's projected SCWSP supply is presented in Table 6-8.
- During multiple dry years, the City anticipates increasing its groundwater production on a short-term basis from the normal year production of 2,500 af/yr to 4,500 af/yr. The groundwater supply is considered to be 100 percent reliable.
- The City anticipates that 700 af of water will be available for use in multiple dry years through operation of its ASR well. An additional 300 af is estimated to be available by 2040 for a total of 1,000 af. The City is assumed to be unable to refill the ASR storage during multiple dry years. Therefore, the annual ASR supply available is assumed to equal one fifth of the total stored volume (i.e., 140 af/yr between 2025 and 2035 and 200 af/yr between 2040 and 2045). This water supply is considered to be 100 percent reliable assuming that the City is consistently able to refill the ASR storage in non-drought years to maintain at least 1,000 af in storage at the beginning of a multiple dry year sequence.

- The City has acquired 10,500 af/yr of storage in Semitropic, which allows the City to withdraw up to 3,500 af/yr for three consecutive years. Due to the difficulties experienced by the City in accessing stored water via the DMC on a short timeframe, the City has conservatively estimated that the 0 percent of the City's storage will be available in the first year of a five-consecutive-year drought, and 100 percent will be available over the following four years. Based on the City's current storage at Semitropic of 6,887 af, the amount available in the second to fifth year of a five- consecutive-year drought is assumed to be 1,722 af/yr (6,887 af divided by four). A similar reliability estimate is provided for all dry-year sequences under the assumption that the City is consistently able to re-fill the water bank in non-drought years to maintain at least 7,000 af/yr in storage at the beginning of a multiple dry year sequence.
- The City anticipates that a Recycled Water Distribution Network and Exchange agreement will be executed with the USBR by 2030 to provide additional CVP supplies to the City in exchange for the City discharging a like amount of tertiary-treated recycled water to the DMC. The City assumes that the Recycled Water Distribution Network and Exchange will be implemented as needed to meet future demand conditions and is currently projected to supply an amount ranging from 1,925 af/yr in 2030 to 7,500 af/yr in 2045. This water supply is considered to be 100 percent reliable.
- The City's recycled water supply is expected to be 100 percent reliable. Based on the projected non-potable demands and assuming that the City makes investments in infrastructure and permitting, the City estimates that they will have access to 1,000 af/yr of recycled water supply in 2025, increasing to 6,300 af/yr in 2045.

The reliability of each of the City's existing and additional planned future water supplies and their projected availability during a five-consecutive-dry year (multiple dry year) period at buildout is shown in Table 6-8.

**Table 6-8. Projected Existing and Additional Planned Future Water Supplies Available Five-Consecutive-Dry Years at Buildout**

| Supply | Percent of Entitlement | Projected Available Supplies, af/yr | | | | |
|---|---|---|---|---|---|---|
| | | Year 1 | Year 2 | Year 3 | Year 4 | Year 5 |
| Existing Water Supplies | | | | | | |
| USBR CVP - Tracy Contract[a] | 40 | 2,372 | 2,372 | 2,372 | 2,372 | 2,372 |
| USBR CVP - BCID Contract | 0 | 0 | 0 | 0 | 0 | 0 |

*Source: City of Tracy 2020 UWMP, Tables 7-4 and 7-5, June 2021.*

(a) Percent of historical use.

(b) Information provided by SSJID. SSJID's reliability estimates for a five consecutive year drought were based on the historical supplies available during the 2012 to 2016 drought period. During 2012, 2013, and 2016 (the first, second, and fifth years), SSJID was able to provide the full allocation, whereas during 2014 and 2015 (the third and fourth years), SSJID was only able to provide 75 percent of the full allocation.

(c) Groundwater and recycled water volumes assume the City invests in infrastructure and/or permitting.

(d) ASR volumes assume surplus supplies are available in wet years to inject and store, as well as additional investment in ASR construction and operation.

### *6.5.4 Emergency Water Supply Conditions*

During the recent drought conditions in California, water supply deliveries from the SWP and CVP (and other surface water supply sources throughout California) were severely reduced and even the availability of pre-1914 water rights was challenged. Many water supply agencies, including the City, implemented their Water Shortage Contingency Plans, including mandatory water conservation measures, to reduce water use. Even with 0 percent deliveries from the City's USBR CVP agricultural supplies in 2014, the diversity of the City's water supply portfolio together with water conservation efforts by the City's customers allowed the City to meet all water demands. If the recent drought were to re-occur, and deliveries of surface water supplies are reduced further, the City's Water Shortage Contingency Plan would be enacted as needed.

The City's Water Shortage Contingency Plan includes shortage response actions for six water shortage levels up to greater than 50 percent shortage due to foreseeable or unforeseeable events. The City's Water Shortage Contingency Plan is included in Appendix H of the 2020 UWMP. The City may implement demand reduction actions, supply augmentation, mandatory restrictions, and other actions as appropriate for the shortage level to reduce the gap between supply and demand.

Further, the City has prepared a Water System Emergency Response Plan which provides a framework for emergency response by the City's Utilities Department by describing the department's emergency management organization, roles, and responsibilities and emergency policies and procedures. The Water System Emergency Response Plan provides action plans to be implemented to address the emergency.

# 7.0 DETERMINATION OF WATER SUPPLY SUFFICIENCY BASED ON REQUIREMENTS OF SB 610

Water Code Section 10910 states:

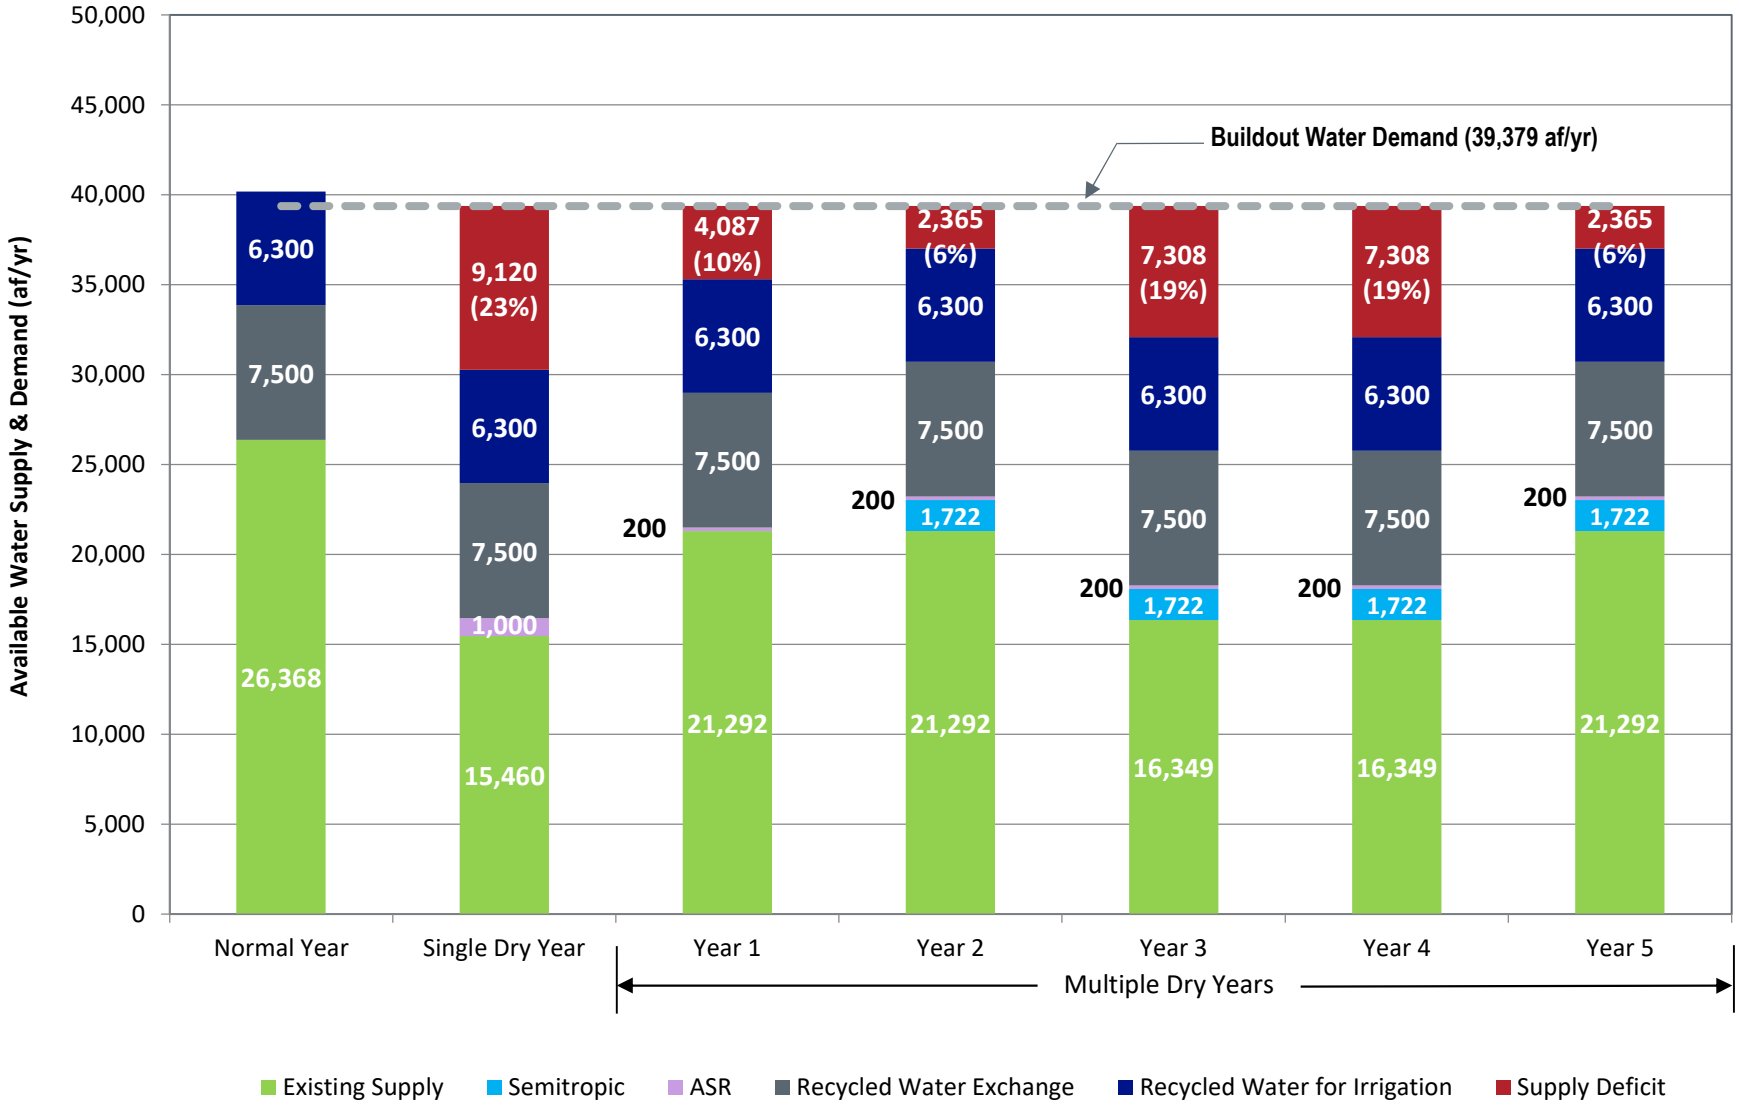
> *10910(c)(4) If the city or county is required to comply with this part pursuant to subdivision (b), the water supply assessment for the project shall include a discussion with regard to whether the total projected water supplies, determined to be available by the city or county for the project during normal, single dry, and multiple dry water years during a 20-year projection, will meet the projected water demand associated with the proposed project, in addition to existing and planned future uses, including agricultural and manufacturing uses.*

Pursuant to Water Code section 10910(c)(4), analyses were conducted to assess the sufficiency of total projected water supply for existing and planned future demands, including the demands of the Proposed Project, during normal, single dry, and multiple dry water years over a 20-year projection. A service reliability analysis was conducted in Section 7 of the City's 2020 UWMP, which compared future supplies and demand to buildout, assumed as 2045 but is certain to occur beyond that planning horizon. As discussed in Section 5.2, the Proposed Project's demands are included in the City's future water demand projections.

## 7.1 Sufficiency of Water Supply

Table 7-1 summarizes the projected availability of the City's existing and planned future potable water supplies compared with projected water demands in normal, single dry and multiple dry years at Buildout. Figure 7-1 shows the City's existing and planned future potable water supplies and the City's projected water demands in normal, single dry and multiple dry years under the Buildout time frame, which is expected to occur after 2045.

To be conservative, water demands were assumed to be at normal levels. With future planned projects implemented, the results of the assessment show that water supply is sufficient during normal years. However, during a single dry year or a multiple dry year period, the City must depend more heavily on conservation efforts, groundwater, and the proposed future supply projects to overcome the gap between supply and demand. As described in this WSA and the City's 2020 UWMP, these findings are primarily due to projected reduced reliability of the City's CVP supplies and SSJID supplies in dry years.



To close the gap between supply and demand during dry years, the City will need to implement its Water Shortage Contingency Plan to reduce water demands. As discussed in Section 5.3, the City has shown that it can achieve its water conservation goals. During the 2012-2016 statewide drought, the City exceeded its water conservation goals of 25 percent. Further, the City must fully implement its proposed future water supply projects, including the Recycled Water Distribution Network and Exchange Program and expansion of the ASR Program. Investments in wet year water supplies will also be needed to refill storage in Semitropic and expand the City's ASR program. Delays in implementing the proposed future water supply projects could result in greater water supply shortages and the need for additional water conservation to meet demands.

**Table 7-1. Summary of Buildout Total Water Supply Versus Demand During Hydrologic Normal, Single Dry, and Multiple Dry Years[a]**

| Hydrologic Condition | | Supply and Demand Comparison, af/yr |
|---|---|---|
| Normal Year[b] | | |
| Available Total Water Supply | | 40,168 |
| Total Water Demand (with Proposed Project) | | 39,379 |
| Potential Surplus (Deficit) | | 789 |
| Percent Shortfall of Demand | | - |
| Single Dry Year[c] | | |
| Available Total Water Supply | | 30,259 |
| Total Water Demand (with Proposed Project) | | 39,379 |
| Potential Surplus (Deficit) | | (9,120) |
| Percent Shortfall of Demand | | 23% |
| Multiple Dry Years[d] | | |
| Year 1 | Available Total Water Supply[e] | 35,292 |
| | Total Water Demand (with Proposed Project) | 39,379 |
| | Potential Surplus (Deficit) | (4,087) |
| | Percent Shortfall of Demand | 10.4% |
| Year 2 | Available Total Water Supply | 37,014 |
| | Total Water Demand (with Proposed Project) | 39,379 |
| | Potential Surplus (Deficit) | (2,365) |
| | Percent Shortfall of Demand | 6.0% |
| Year 3 | Available Total Water Supply | 32,071 |
| | Total Water Demand (with Proposed Project) | 39,379 |
| | Potential Surplus (Deficit) | (7,308) |
| | Percent Shortfall of Demand | 18.6% |
| Year 4 | Available Total Water Supply | 32,071 |
| | Total Water Demand (with Proposed Project) | 39,379 |
| | Potential Surplus (Deficit) | (7,308) |
| | Percent Shortfall of Demand | 18.6% |
| Year 5 | Available Total Water Supply | 37,014 |
| | Total Water Demand (with Proposed Project) | 39,379 |
| | Potential Surplus (Deficit) | (2,365) |
| | Percent Shortfall of Demand | 6.0% |

(a) Water demands are from Table 5-2.
(b) Normal Year supplies are from Table 6-6.
(c) Single Dry Year supplies are from Table 6-7.
(d) Multiple Dry Year supplies are from Table 6-8.
(e) Assumes 0 percent of the City's storage in Semitropic is available for the first year.

**Figure 7-1. City of Tracy Existing and Planned Future Potable Water Supplies vs. Projected Demand - Buildout**

The dry year shortfalls presented in Table 7-1 are based on water supply and demand projections with numerous uncertainties and the situation is dynamic as discussed in Section 7 of the 2020 UWMP. The City continues to work on strategies and actions to address the projected water supply shortfall. Uncertainties are itemized below, along with the City's water management strategies and options.

## 7.2 Uncertainties in Dry Year Water Supply Projections

Significant water supply shortfalls are currently projected in future single and multiple dry years. These projections include numerous sources of uncertainty as summarized below:

- The Bay-Delta Plan Amendment implementation is under negotiation. The SSJID and others are continuing negotiations with the SWRCB on implementation of the Bay-Delta Plan Amendment for water supply cutbacks, particularly during droughts. This is a dynamic situation and the projected drought cutback allocations may need to be revised before the next (i.e., 2025) UWMP depending on the outcome of ongoing negotiations. The City has considered a conservative estimate of the potential impacts of the Bay-Delta Plan Amendment on the SCWSP (and therefore the City), which is provided in Appendix G of its 2020 UWMP.
- The supply yield of the City's development of additional ASR and recycled water supplies are accounted for in current supply projections. However, implementation of these projects will require significant investment by the City. Similarly, investments in wet years supplies will be needed to refill storage in Semitropic and expand the City's ASR program.
- The City continues to work closely with the USBR and SSJID on their rationing policies to ensure that M&I needs can be met. Rationing policies may potentially be revised.
- The City's projected water demands are subject to change in the future based on water conservation policies and regulations for current and future development, and the pace and extent of development.
- Frequency and duration of cutbacks and, therefore, the shortfalls are also uncertain. In addition to the supply volumes, the above listed uncertainties would also impact the projected frequency and duration of shortfalls.

## 7.3 Water Management Strategies and Options

The City has developed strategies and actions to address the projected supply shortfalls discussed in the City's 2020 UWMP and provided below.

### *7.3.1 Recycled Water for Non-Potable Use*

The City continues to develop recycled water supplies as discussed in Section 6.2. Recycled water is planned to augment non-potable demands that would otherwise be supplied with potable water. Buildout potable water demands could be less than the current projections and therefore the resultant supply shortage will likely to be smaller.

### *7.3.2 Future Water Supply Projects*

The City continues to evaluate the expansion of its existing supply and to obtain new supply sources, including the ASR Program and Recycled Water Distribution Network and Exchange Program. Other potential supply options, such as direct potable reuse of recycled water, are also being considered.

### 7.3.3 Implementation of Demand Management Measures

The City has an active water conservation program and continues to implement the demand management measures described in Section 9 of its 2020 UWMP. Further, in response to the anticipated future shortfalls, the City has developed a robust Water Shortage Contingency Plan (WSCP) that systematically identifies ways in which the City can reduce water demands. The WSCP is included in Section 8 of its 2020 UWMP.

### 7.3.4 Policy-Based Water Efficiency Tools

The City is currently exploring other policy-based water efficiency tools that other supply-constrained agencies across California have implemented. These policy-based tools are often bundled together and referred to as Water Demand Offset (WDO) or Water Neutrality policies. Through these policies, project developers are generally required to offset the new demand anticipated by the development through some combination of demand mitigation options, such as:

- **On-site retrofits.** Project developer with existing property reduces total projected water demand by retrofitting existing property with efficient water fixtures. If projected water demand is reduced below baseline for existing property, no off-site WDOs are required. If not, offsite WDOs are required.
- **Off-site retrofits.** Project developer coordinates and pays for installation of water efficient fixtures at other properties or converts existing irrigation systems to recycled water for other off- site properties, typically those owned by other entities.
- **On-site reuse.** Larger scale developments are required to implement on-site reuse of water, including rainwater, greywater, stormwater, and blackwater, as has recently been implemented by the Cities of San Francisco and Menlo Park.
- **Supply augmentation.** Project developer secures its own water supply to serve the development, either through direct provision of water to the development or through an agreement to transfer rights to the water supplier.
- **WDO fees.** Project developer pays fees to implementing entity based on the amount of water offset, and the agency uses the fees to fund water conservation programs. Such conservation programs could include system water loss mitigation projects (e.g., capital improvement, Advanced Metering Infrastructure [AMI] meters, etc.), purchase of water efficient equipment (e.g., NO-DES hydrant flushing machine to recycle water used to flush mains), and recycled water system infrastructure, as well as fixture rebate or retrofit and education-based conservation programs.

Such policies could be designed as a “net neutral” policy wherein the new development is required to offset all new demands associated with the development project and minimize the overall supply reliability impacts for the existing customers.

# 8.0 WATER SUPPLY ASSESSMENT APPROVAL PROCESS

> *10910 (g)(1) Subject to paragraph (2), the governing body of each public water system shall submit the assessment to the city or county not later than 90 days from the date on which the request was received. The governing body of each public water system, or the city or county if either is required to comply with this act pursuant to subdivision (b), shall approve the assessment prepared pursuant to this section at a regular or special meeting.*
>
> *10911 (b) The city or county shall include the water supply assessment provided pursuant to Section 10910, and any information provided pursuant to subdivision (a), in any environmental document prepared for the project pursuant to Division 13 (commencing with Section 21000) of the Public Resources Code.*

As the approving agency for the Proposed Project, the Tracy City Council must approve this WSA at a regular or special meeting. Furthermore, the City must include this WSA and its findings in the Draft Environmental Impact Report (EIR) that is being prepared for the Proposed Project.

Pleasanton CA, 94588

Subject: Tracy Costco Depot (Project) Annexation EIR Support

Dear Mr. Steiner,

The purpose of this letter report is to document the findings of the Costco Depot Project Annexation EIR Support, which was conducted by Carollo Engineers, Inc. (Carollo).

## Background

Carollo developed a draft Wastewater Master Plan Update (Master Plan Update) for the City of Tracy (City) that was submitted in August 2020. The Master Plan Update was created to help the City plan wastewater system upgrades to serve existing and future developments. The proposed Costco Project is a Costco Depot that will consist of two warehouse and distribution buildings located along the southwestern City limits, south of West Schulte Road, north of 580 freeway, and along the Delta-Mendota Canal. Figure 1 displays the location of the Costco Depot and Figure 2 displays the proposed pipeline that will possibly be servicing the Costco Depot. The objectives of this study are to:

- Evaluate the impacts of the proposed Costco Project on the existing wastewater collection and treatment system.
- Confirm the infrastructure to convey the projected flows for the development is properly sized.

## Costco Depot Project

The Costco Project is a proposed Costco Depot located just outside the southwestern City limits. The Costco Project is proposing to change the land use designation from general agriculture to light industrial. Table 1 shows a summary of the updated land use and projected flows for the Costco Project. As shown in Table 1, the updated land use designation includes a total of 104 acres of light industrial land with a total average dry weather flow (ADWF) of 78,000 gallons per day (gpd) (0.078 million gallons per day [mgd]). The flow factor of 750 gpd/ac for industrial land use type was generated as part of the City's Wastewater Master Plan Update.

Table 1 Updated Land Use

| Land Use | Area (ac) | Flow Factor (gpd/ac) | ADWF (gpd) |
|---|---|---|---|
| Industrial | 104 | 750(1) | 78,000 |

Notes:
(1) Flow factor was developed in the City of Tracy's Wastewater Master Plan Update (August 2020).

Maximum dry day weather flow (MDDWF) and Peak wet weather flow (PWWF) are used to evaluate the collection system. The MDDWF was determined by applying a peaking factor of 1.12 to the ADWF. This peaking factor was determined by looking at historical MDDWF and ADWF. The MDDWF for the Costco

WATER
OUR FOCUS
OUR BUSINESS
OUR PASSION

Project is 0.087 mgd. The PWWF is the highest observed hourly flow that occurs following the design storm event, and therefore is used for evaluating the collection system. Wet weather infiltration and inflow (I/I), which occurs during and after rainfall events, increases flows in the collection system. PWWF was derived by routing a 10-year, 24-hour design storm through the hydraulic model. A peak I/I rate for future development of 500 gpd/acre was applied to the Costco Project. This calculated I/I rate was added to the ADWF to derive the PWWF. The PWWF for the Costco Project is 0.13 mgd. Table 2 shows a summary of the ADWF, MDDWF, and PWWF.

Table 2 Wastewater Flows

| Flow Type | Wastewater Flow (mgd) |
|---|---|
| ADWF | 0.078 |
| MDDWF[(1)(2)] | 0.087 |
| PWWF | 0.13 |

Notes:
(1) MDDWF to ADWF peaking factor is 1.12.
(2) This peaking factor was developed in the City of Tracy's Master Plan Update (August 2020).

## Collection System Performance Criteria

The evaluation of the impacts of the Costco Project is based on the evaluation criteria summarized in the Master Plan Update. The performance criteria include maximum flow depth to pipe diameter ratio (d/D). The d/D value is defined as the depth of flow (d) in a pipe during peak (design) flow conditions divided by the pipe's diameter (D). The maximum allowable flow depth varies depending on the flow condition:

- Peak Hour Dry Weather Flow (PHF): Under dry weather flow conditions, the maximum allowable flow depth to pipe diameter (d/D) ratio is 0.75 for all pipelines.
- Peak Wet Weather Flow (PWWF): Under PWWF conditions, flow depths are allowed to exceed the maximum d/D ratio established for dry weather conditions. The maximum d/D ratio is 0.90 for all pipelines.

## Collection System Evaluation

Due to the location of the Project, the developer has proposed to use an existing but currently abandoned 8-inch sewer that runs along Schulte Rd to Lammers Rd. As part of the study, the City is requiring a full inspection of the abandoned pipeline to determine if rehabilitation is needed to meet the City's Standards. The rehabilitation may include, but is not limited to, ball flushing, cleaning, CCTV inspection, repairs where needed and a possible PVC or CIPP liner.

Keir & Wright conducted the CCTV video inspections and cleaning of the proposed 8-in pipeline in spring of 2020 and the videos were provided to Carollo and the City. Keir & Wright identified multiple locations that need repairs and ensured the City that those locations will be repaired to meet City standards before this pipeline will be approved to come online.

Keir & Wright provided the Patterson Pass Business Center Sanitary Sewer and Water System Phase II project plans which include the 8-in portion of pipeline that runs along Schulte Rd to Lammers Rd. The project plans are included as an enclosure to this letter.

The 8-inch pipeline along Schulte Rd originally flowed to a now abandoned lift station. This lift station is not going to be rehabilitated, but instead a new pipeline along Lammers Rd will need to be constructed to allow the pipeline on Schulte Rd to be a viable option. The pipeline running north along Lammers Rd that needs to be constructed will be an 18-inch diameter pipeline that is 3,310 feet long (pipeline WWGM-5 from the Master Plan Update 2040 recommended improvements, see Figure 6.5 from the Draft Master Plan Update (August 2020) as an enclosure to this letter). A similar pipeline with a slightly different layout was also recommended in the Tracy Wastewater Master Plan completed in December 2012 by CH2MHill (see Figure 5-1 as an enclosure to this letter).

The City's wastewater system hydraulic model was used to conduct the evaluation and analysis of the potential impacts of the Costco Project. The following scenarios were evaluated:

- Existing System, Design Storm
- Existing System, Maximum Dry Day

Based on modeling results, the flows from the Costco Project cause the maximum d/D under PWWF conditions in the sewer along Schulte Road and along Lammers Road to raise to 0.39 and 0.23, respectively. With the addition of the Costco Project, the maximum d/D in the sewer along Schulte Road and Lammers Road under existing maximum dry day conditions is 0.42 and 0.23, respectively. The projected d/D levels in the Schulte Road and Lammers Road sewers do not trigger the need for improvements as the maximum d/D criteria established in the sewer Master Plan Update is 0.75.

## Treatment System Evaluation

The existing wastewater flows are nearing the rated capacity of the City's wastewater treatment plant (WWTP). The City is in the process of constructing a project to increase the capacity to manage growth in the future. According to City staff, the existing plant has the capacity to treat and dispose of the proposed 0.078 mgd increase in flows from the Costco project.

## Conclusion and Recommendations

The objectives of this study were to evaluate the impacts of the Costco Project on the existing sewer collection and treatment system, and to confirm the infrastructure to convey the projected flows are properly sized and rehabilitated.
The main concern for this project is the impact the Costco Project has on the Schulte Rd and Lammers Rd sewers and the WWTP.
The hydraulic model was used to evaluate the impacts from the construction of the Costco Project. Since this was a previously abandoned pipeline, there are currently no flows. The flows from the Costco Project raise the maximum d/D in the Schulte Road sewer to 0.39 under PWWF conditions and raise the maximum d/D in the Schulte Road sewer to 0.42 under MDDWF conditions. Therefore, the additional flows from the

Costco Project do not cause any capacity deficiencies downstream or trigger the need for capacity projects. It is assumed that the pipeline along Schulte Road (pipeline WWGM-5 from the Master Plan Update 2040 recommended improvements) will be constructed to serve this area.

Currently the City's WWTP has the available capacity to treat and dispose of the proposed flows attributed to the Costco project.

Sincerely,

CAROLLO ENGINEERS, INC.

Tim Loper, P.E.

Project Manager

**Costco Depot Project Planning Submittal Review for Drainage and Flood**

WOOD RODGERS

**TECHNICAL MEMORANDUM**

**TO:** Ms. Ilene Macintire, PE, City of Tracy
Mr. Richard Steiner, PE, LEED AP, EnvSP, SNG & Associates, Inc.

**FROM:** Mr. Harvey Oslick, PE, CFM, CPSWQ, EnvSP, Wood Rodgers, Inc.

**DATE:** August 10, 2021

**SUBJECT:** Costco Depot Project Planning Submittal Review for Drainage and Flood Management

---

## PURPOSE

The purpose of this Technical Memorandum is to present the results of an evaluation of pre-project 100-year flood conditions, a qualitative discussion about post-project flood management with respect to the proposed Costco Depot Project (Project), and comments on drainage elements shown on the on-site and off-site planning-level documents. Runoff from off-site watersheds that can impact the site originates in a watershed upstream of the Delta-Mendota Canal. This evaluation included a review of the measures to manage flows that originate off-site and to mitigate the impacts of the proposed project on 100-year flows as shown on the plans for New Costco Facilities dated June 6, 2021 (6th Submittal). Sheets 2, C.2.1, C.2.2 and C.2.3 from the 6th Submittal are attached for reference. This Technical Memorandum also discusses storm drainage detention requirements in the context of the city of Tracy's (City's) adopted and draft storm drainage master plans.

## LOCATION

The location of the Project is south of the City limit along W. Schulte Road as shown on the attached **Figure 1** - Watershed Map and on Sheet 2 from the 6th Submittal. The site is north of the Delta-Mendota Canal, extending from approximately 700 feet to 2,700 feet east of Hansen Road. The proposed Project site area is approximately 104 acres and it is within the City's sphere of influence. The proposed Project area is within the Lammers Watershed as defined in the Citywide Storm Drainage Master Plan (2012 CSDMP) dated November 2012 prepared by Stantec and in the Draft Citywide Storm Drainage Master Plan Update (Draft CSDMP Update) dated March 13, 2020 prepared by Wood Rodgers. The site is located downstream from an overchute that carries runoff from a large watershed across the Delta-Mendota Canal and is referred to as Offsite Tributary Area 3 in the legend on Figure 1. **Figure 2** illustrates Key Existing Features and the existing conditions 100-year flood results discussed below.

## EXISTING CONDITIONS 100-YEAR FLOOD MODELING

Wood Rodgers developed two existing conditions models. One of the models covers the upstream off-site areas and was based on 2007 LiDAR topographic data. The other model focused on the Project site and is based on site topographic data provided by Kier and Wright.

The existing conditions model that includes the off-site watersheds was created using Innovyze's InfoWorks ICM and employing the methodology described in the Draft CSDMP Update. The 100-year storm analysis used a 24-hour storm. The purpose of the existing conditions model that includes the off-site watersheds was to estimate the amount of runoff that would be expected to flow across the Delta-Mendota Canal onto the Project site.

The major watershed upstream from the Project is called Offsite Tributary Area 3 (or OFF3). The majority of this watershed is south of the California Aqueduct and it drains under Interstate 580 through a large culvert, across the California Aqueduct through an overchute, and under the railroad tracks that are south of the Safeway Distribution Center. To the north of the railroad tracks, the runoff turns to the east towards Hansen Road. There is a weir along the south side of an access road that runs on the south side of the Safeway Distribution Center to the north of the flow path towards Hansen Road. If the flood levels upstream of Hansen Road reach the level of the weir, some of the runoff from Offsite Tributary Area 3 will drain to the north through a drainage path within the Safeway Distribution Center. Any flows that drain over the weir to the north will not impact the Project site. Four 3-foot-high by 6-foot-wide concrete box culverts (CBCs) under Hansen Road convey most of the runoff east, towards an overchute crossing of the Delta-Mendota Canal that drains towards the Project site. There are a two other culverts located under Interstate 580 upstream from the minor pipe crossings over the California Aqueduct. These pipe overchutes (estimated to be 18-inch and 36-inch diameter pipes based on imagery) were included in this evaluation and were determined to not contribute significantly to the flows towards the Project site due to insignificant conveyance towards the box culverts under Hansen Road. The model routed the flows through the Hansen Road culverts and added local runoff, routing the combined flow through the Delta-Mendota Canal overchute.

Wood Rodgers reviewed the plans for the Delta-Mendota Canal overchute and evaluated its capacity. The ICM model calculated the 100-year discharge through the 3.5-foot-high by 7.5-foot-wide restriction at the upstream end of the overchute over the Delta-Mendota Canal to be approximately 170 cubic feet per second (cfs). The design plan (see Sheet 214-D-12201, included as **Figure 3**) indicates a design discharge of 200 cfs for the overchute.

In the existing conditions, the runoff from Offsite Tributary Area 3 that crosses the Delta-Mendota Canal would spread across the Project site, flowing generally to the northeast and perpendicular to existing contours. Most of the flow would pass across the eastern boundary of the Project. Some of the flow would re-concentrate on the north side of the Project site (W1951 on Figure 2), along the south side of Schulte Road before flowing to the east. Only an insignificant amount of flow would be expected to cross Schulte Road to the north based on a two-dimensional hydraulic analysis. The presentation of results was truncated at the future Pavilion Parkway because the

modeled topography does not reflect existing conditions to the east of Pavilion Parkway. A review of the site plans for the building and associated grading southeast of the corner of Pavilion Parkway and Schulte Road found that the finished floor of the structure is well above the potential overland flooding elevation along Schulte Road.

The existing conditions model, which was based on the pre-project site topography provided by Kier and Wright, was prepared using the computer program HEC-RAS. The HEC-RAS model simulates 200 cfs from the Delta-Mendota Canal overchute flowing across the Project site to provide a distribution of flows along the eastern Project boundary. The Project will be conditioned to approximate this simulated distribution as part of the detailed design and analysis process. The HEC-RAS results were provided to Kier and Wright. Kier and Wright superimposed these results on a site plan (included as **Figure 4**) that presents a concept for maintaining approximate existing conditions for the distribution of runoff crossing the Project site.

## PROPOSED PROJECT

The Project includes two buildings and associate parking and drive aisles. Sheets C.2.1, C.2.2 and C.2.3 of the 6th Submittal illustrate the proposed plan to convey flows onto the Project site from the Delta-Mendota Canal overchute around to the eastern side of the Project area. A Ponding Area is proposed near the northern end of the Delta-Mendota Canal overchute. A berm with a crest elevation of 186 feet is proposed to direct flow into the Ponding Area, away from the proposed building to the north of the Ponding Area. A concrete and asphalt swale integrated into the parking area will convey the flow out of the Ponding Area to the southeast and around the south side of the proposed eastern building. The proposed configuration is adequate to convey 200 cfs without impacting the proposed structures.

The 6th Submittal shows a Treatment Planter along the eastern edge of the Project with a label indicating a bottom elevation of 159.0 feet. Calling out a bottom elevation of the Treatment Planter infers that the bottom is planned to be horizontal, as it should be for typical treatment planter installations. However, a single horizontal bottom elevation for this entire Treatment Planter may not be appropriate. A stepped bottom along the Treatment Planter may be considered during detailed design.

Sheet C.4.1 of the 6th Submittal presents the Stormwater Quality Control Plan. The Project area is divided into seven Drainage Management Areas (DMAs), each draining into a Treatment Planter. It should be noted that the DMAs must follow design condition topographic drainage area boundaries, even when these boundaries do not correspond to property boundaries. For example, the off-site area that will be graded to drain into the Ponding Area must be included in DMA 5. The expected minor adjustments to the DMA boundaries would not be expected to significantly change the treatment requirements, and this can be addressed as part of detailed design.

It is reasonable to assume that no flows originating south of the Delta-Mendota Canal would be expected to flow onto the site during a stormwater quality event. No water quality flows originating off-site would be expected to enter the site because, per the Multi-Agency Post-Construction Stormwater Standards Manual, the mean runoff producing event is 0.33 inch and the

initial abstraction (precipitation loss) is 0.70 inch for a Soil Conservation Service (SCS) Curve Number (CN) of 74, which is applicable to the undeveloped portions of the watershed.

The table on Sheet C.4.1 lists a total tributary area of 94.61 acres for the seven DMAs. The table lists 78.71 impervious acres based on the combination of roof and pavement areas. This equates to an imperviousness of 83.2 percent. The table lists a total imperviousness ratio of 5.13. The total values should be blank, or weighted averages should be listed, where sum totals do not provide useful information.

Flow arrows were used on the 6th Submittal drawings to indicate that overflow from the site that result from high flows originating off-site would be distributed along the eastern edge of the Project site. Some of these flow arrows were determined to be located too far to the south because the arrows are south of where existing conditions modeling shows existing conditions site runoff discharging to the east. The Project will be conditioned to control overflow from the site in a manner that approximates how overflows would have occurred in the pre-project condition, as illustrated on Figure 4.

## PROJECT IN THE CONTEXT OF THE 2012 CSDMP

Exhibit B from Supplement No. 3 to the 2012 CSDMP, by Stormwater Consulting Inc. dated October 8, 2019, shows the Project area in the context of the 2012 CSDMP. The Project site is in drainage area L12, which is downstream from detention basin DET LW12 and upstream from detention basin DET LW11 in drainage area L10. Figure 3-2 from the 2012 CSDMP lists assumptions relative to the Project area. Figure 3-2 from the 2012 CSDMP and Exhibit B from Supplement No. 3 are attached for reference.

Detention basin DET LW 11 will receive piped runoff from the Project area and has a planned piped outlet to the north. The overland release from the Project area (drainage area L12) is through drainage area L10, including the portion of L10 that will become DET LW11. The overland release from DET LW11 is to the east into drainage area L05, and the overland release from L05 is further to the east into drainage area L06. The implications of the potential overland release on these areas and other areas further downstream was not evaluated. Figure 3-2 includes the following statements:

1. "There is not a detention basin proposed to regulate discharges into the Sphere of Influence from Sub-basin OFF3."
2. In reference to Sub-basin OFF3 (and OFF2), "Offsite sub-basins that must be accounted for in onsite design, but not included in sizing of detention basins serving new development."
3. Regarding drainage areas L05 and L06, "Sub-basins draining to Delta Mendota Canal, WSID Upper Main Canal, or tailwater ponds."

In other words, the 2012 CSDMP did not evaluate potential impacts of overland release from off-site tributary areas reaching the City limit. The 2012 CSDMP focused on managing runoff originating with the City's sphere of influence. The 2012 CSDMP called for detention basin DET

LW11 to have a peak storage volume of 30 acre-feet with a peak discharge of 2.5 cfs. Part of the 2.5 cfs peak discharge from DET LW11 was planned to be the 0.5 cfs discharge from DET LW 12 that would flow through DET LW11, leaving DET LW11 with an effective drawdown rate of 2 cfs. The 2012 CSDMP calls for DET LW11 to serve drainage areas L10 and L12.

The 2012 CSDMP sized DET LW11 based on drainage area L12 (the Project area) being 103.3 acres at 57-percent effective imperviousness and drainage area L10 being 225.5 acres at 6-percent effective imperviousness.

## CITY DESIGN STANDARDS AND THE OFF-SITE STORM DRAIN

The City Design Standards were applied to planned conditions in order to provide comments on the sizing of the off-site storm drainage system. The Design Standards allow for combined street and pipe conveyance to be considered in the design, and they refer to both the 10-year and 100-year storm events. Rational Method analysis was used to compute discharges. Flow routing that would occur in the Treatment Planters was assumed to result in a site time of concentration of 20 minutes.

The Rational Method computes a discharge as the product of the runoff coefficient, rainfall intensity and tributary area. A runoff coefficient of 0.75 was computed for the 103-acre tributary area based on 95 acres of commercial area (C=0.8) and 8 acres of open space (C=0.1). The 10-year and 100-year rainfall intensities are 0.8 and1.3 inches per hour, respectively, based on Plate 5-1 in the Design Standards. These values result in a 10-year design discharge of 62 cfs and a 100-year discharge of 100 cfs. Based on Plate 5-4 in the Design Standards, the capacity of Schulte Road would be approximately 20 cfs at the top-of-curb and 60 cfs at the right-of-way limits. A minimum pipe capacity of 42 cfs is, therefore, required based on the 10-year discharge of 62 cfs less the street conveyance capacity of 20 cfs.

Storm Drain Exhibit Sheet 4 of 6 shows a transition from a 30-inch to a 36-inch storm drain pipe (both at a slope of 0.005) at the easternmost of two 24-inch stubs from the parcels between the Project site and DET LW11. Storm drain pipes with diameters of 30 inches and 36 inches at a slope of 0.005 have capacities of approximately 30 cfs and 49 cfs, respectively. Therefore, a minimum pipe size of 36 inches should be used from the point where all runoff from the Project site is combined to a point where a capacity in excess of 49 cfs is required. Analysis of the incremental increases in flow at the various connection points along the Project's frontage will be required to size the storm drains upstream from the 36-inch pipe. The City's General Plan does not include development of the two parcels to the east of the Project. Therefore, there is no basis for planning for flows towards Schulte Road that could potentially be collected in storm drain stubs.

As part of detailed design, the Project will need to demonstrate that all runoff originating from the Project site will be directed into DET LW11. There is a potential that runoff originating from the Project site could flow along Schulte Road to the east to a point where it could reach, and possibly cross, Pavilion Parkway. The Project will need to demonstrate that no flow from the project site crosses Pavilion Parkway when there is a discharge of 100 cfs from the Project. Multiple inlets west of Pavilion Parkway will likely be needed to direct the runoff conveyed along Schulte Road

into DET LW11. A 48-inch pipe would have sufficient capacity to convey 100 cfs into DET LW11, which should be adequate if there are not additional significant connections (such as the two 24-inch stubs that are currently shown) into the storm drain along Schulte Road. The final segments of pipe from Schulte Road into DET LW11 will need to be 48 inches in diameter. The precise configuration of the pipe and inlet system will need to be developed during the design phase.

The General Plan land use designation for the two parcels situated to the east of the Project (for which 24-inch stubs are shown on the Storm Drain Exhibit) is "Park", and this designation was used as a basis for sizing DET LW11. When and if this land use designation changes, DET LW11 would need to be expanded to accommodate runoff from additional impervious areas. The Project is not responsible for this potential future expansion. The Project does not need to plan for future development of the area that is currently zoned as Park and, therefore, does not need to include stubs for future development into the Schulte Road storm drain that is being planned.

## PROJECT IN THE CONTEXT OF THE CSDMP UPDATE

The overall system configuration serving the Lammers Watershed was not revised between the 2012 CDSMP and the Draft CSDMP Update. However, the Draft CSDMP Update provides recommendations for updated design criteria to address identified issues with the 2012 CSDMP and apply current best available information. These recommendations resulted in the basin sizes in the Draft CSDMP Update to be larger than those called for in the 2012 CSDMP. Key reasons for why the Draft CSDMP Update recommends a larger basin for DET LW11 include the 2012 CSDMP assumption that the developing portion of the drainage area would only have an effective imperviousness of 57 percent and that only a 24-hour storm was used, even though it would take 15 days to drain at the design net discharge rate of 2 cubic feet per second. The Draft CSDMP Update uses an effective imperviousness of 85 percent for industrial development based on a 5-percent reduction from 90 percent to account for the effectiveness of Low Impact Development measures.

The area tributary to DET LW11 downstream from DET LW12 is approximately 326 acres. With a land use designation of park assigned to the two parcels situated to the east of the Project site, the CSDMP Update computed an effective imperviousness of 33.7 percent for the DET LW11 tributary area. DET LW11 should have a total depth of 10 feet based on the invert of the outlet at an elevation of 121 feet, and the existing ground elevations that control the top elevation, in order to satisfy the requirement to not have an embankment. Based on the recommended sizing approach in the Draft CSDMP Update, the DET LW11 should have a capacity of 64 acre-feet, including freeboard. The Draft CSDMP Update recommends that DET LW12 be designed with a peak outflow rate of 1 cfs rather than 0.5 cfs in order to achieve more reasonable drawdown times because this would allow for the use of a 10-day design storm. Therefore, the orifice outlet that will control the peak flow from DET LW11 should be sized for 3 cfs rather than 2.5 cfs. Additionally, it is recommended that the outlet from DET LW11 be fitted with a manual gate that can stop outflow in case downstream conditions require flow reductions at a time when there is available capacity in the basin.

Due to the expectation that site runoff would typically occur before peak runoff from the upstream watershed, the storm drainage system would be expected to direct some of the flow originating off-site into DET LW11. Additionally, DET LW11 is along the overland release path that would receive runoff originating from Offsite Tributary Area 3. Therefore, the detailed design of DET LW11 should include sufficient erosion control measures to limit damage when there is overland flow into the basin and when the basin overflows.

## CONCLUSIONS AND RECOMMENDATIONS

Wood Rodgers evaluated the existing and proposed conditions for the Costco Depot Project site with respect to impacts on 100-year runoff and flooding. The evaluation considered how runoff originating off-site and on-site is planned to be collected and conveyed across the site.

The recommendations in this TM include conditioning the Project to provide detailed analysis during the Project design phase to demonstrate how flows originating off-site will be distributed along the eastern side of the Project. Additionally, calculations will need to be provided to support final sizing of the storm drainage system along Schulte Road. The final sizing of the storm drainage system and inlet configuration near Pavilion Parkway will need to demonstrate how 100-year flows originating on the Project will be directed into DET LW11.

Wood Rodgers recommends that DET LW11 be sized to have a capacity of 64 acre-feet including freeboard based on the basin sizing approach detailed in the Draft CSDMP Update. Because DET LW11 is situated along the overland release path for flows originating in Offsite Tributary Area 3, the basin should be designed to accommodate overland inflow and overflow.

## PAVEMENT LEGEND

AUTO PAVEMENT: 3" AC OVER 4" CLASS II AB OVER 12" LIME TREATED SOIL
AUTO PAVEMENT (T.I.=5.5)

TRUCK PAVEMENT: 5.5" AC OVER 5.5" CLASS II AB OVER 18" LIME TREATED SOIL
TRUCK PAVEMENT (T.I.=9.0)

CONCRETE TRUCK PAVEMENT: 6" CONCRETE OVER 4" CLASS II AB OVER 12" LIME TREATED SUBGRADE.

STORMWATER TREATMENT BIO-RETENTION PLANTER

CITY OF TRACY

APPROVAL OF THESE PLANS DOES NOT RELEASE THE DEVELOPER OF THE OBLIGATION TO COMPLY WITH ALL APPLICABLE CODES, ORDINANCES, STANDARDS AND REGULATIONS IN EFFECT AT THE TIME OF APPROVAL OF THE IMPROVEMENT PLANS. APPROVAL OF THESE PLANS DOES NOT RELEASE THE DEVELOPER OF THE OBLIGATION TO CORRECT ERRORS AND OMISSIONS CONTAINED IN THESE PLANS DURING THE COURSE OF CONSTRUCTION. THE CITY OF TRACY IS NOT RESPONSIBLE FOR THE ACCURACY AND CORRECTNESS OF THE DESIGN SHOWN ON THESE PLANS. APPROVAL OF THESE PLANS DOES NOT AUTHORIZE THE PERFORMANCE OF ANY WORK WITHIN PUBLIC RIGHT-OF-WAY AND/OR PUBLIC EASEMENTS UNTIL AN ENCROACHMENT PERMIT AND/OR EASEMENT DEDICATION HAS BEEN ISSUED BY THE CITY OF TRACY.

## Legend

- Sphere of Influence
- L01 — Sub-basins draining to Delta Mendota Canal, WSID Upper Main Canal, or tailwater ponds
- OFF3 — Offsite sub-basins that must be accounted for in onsite design, but not included in sizing of detention basins serving new development
- Railroad

NOTE: A detention basin is proposed to capture flows derived from Sub-basin OFF2 in the future and limit the downstream discharge to a metered outflow of 5 cfs during a 100-year 24-hour storm. Upon completion of this detention basin (DET OFF2), downstream onsite design will only need to account for the 5 cfs outflow from this sub-basin. There is not a detention basin proposed to regulate discharges into the Sphere of Influence from Sub-basin OFF3.

## Supplement No. 3 Changes to the Citywide SDMP

**List of proposed changes:**

- Changes to Lammers Outfall pipe alignments
- Minor Sub-basin changes (L17A/L17B, extend Lammers Watershed 22 acres into Mountain House Watershed, L20/L14)
- DET MWH3a/3b/3c storage volume reduced from 37 AF to 33 AF
- DET LW6 storage volume increased from 101 AF to 103 AF
- DET LW9a storage volume increased from 89 AF to 94 AF
- DET LW8 no longer depicted as linear basin
- DET LW10A, LW10B, LW9a and LW6 have minor location or configuration changes
- DET LW3 is aggregate basin not located as of yet and will become 3 or so smaller basins to be determined by Specific Plan process for the property formerly known as Gateway
- DET LW4 and LW5 will drain to Lammers Road street storm drain system that will be directed to DET LW3; DET LW4 and LW5 (1 cfs outflow, total) will be "pass through" drainage in DET LW3

**Provisions that are not changing:**

- Outflow rates from detention basins (except DET LW3 outflow increase from 4 cfs to 5 cfs for "pass through" of 1 cfs from DET LW4 and LW5)
- Drainage Agreement between the City and WSID

## Exhibit B – Proposed Revisions to the Existing Citywide Storm Drainage Master Plan per Supplement No.3

**Supplement No. 3 to the Citywide SDMP**

**Legend:**

- Existing Storm Drain
- Proposed Storm Drain
- Existing Detention
- Proposed Detention
- Pipe Change
- Overchutes
- Culverts
- Proposed Culverts
- Outfalls
- Proposed Pump Stations
- Subbasins
- Watershed Boundaries
- Sphere of Influence
- Existing Channel
- Proposed Greenbelt Parkway
- 100-yr Floodplain
- Drain Inlet to Delta Mendota Canal

**Notes:**

1. To DET LW3 via Lammers Road street drainage facilities and/or onsite Gateway facilities.
2. Location(s) and size of DET LW3 to be determined by specific plan process.
